FACTORIES AND WAREHOUSE

TORONTO LONDON WINNIPEG

PLYMOUTH CORDAGE CO.

PLYMOUTH **WELLAND**

It is well known in a general sort of way that Manila rope is the best for most purposes. But there are many grades of Manila fiber.

The manufacturer may use in his rope hemp of poorer quality than good practice permits, yet he may still be entitled to call his rope "Manila" or "Pure Manila." Thus he can probably sell his rope at a less price. It is worth less.

"PLYMOUTH" rope is the rope of quality—is made in one grade only—has been the standard for 85 years.

In buying rope it is safer to specify "PLYMOUTH Manila," which means satisfaction always.

VALUE OF GOOD COPY

Personally, I believe "ads." in trade papers should be m de so attractive, so interesting in some way that the merchant as he glances through the trade journal will stop and see what you have to say. The simple announcement that you are in business is not enough. I don't care how prominent a firm is, they should not get the idea they are so big that all they need to do is to reproduce their name on a page in a trade journal and say nothing more. They should do something to make the merchant curious; in fact, som what anxious to meet the travelling man you are sending out to represent you.

HOLIDAY PRIZE COMPETITIONS

OPEN TO CANADIAN HARDWARE MERCHANTS AND CLERKS

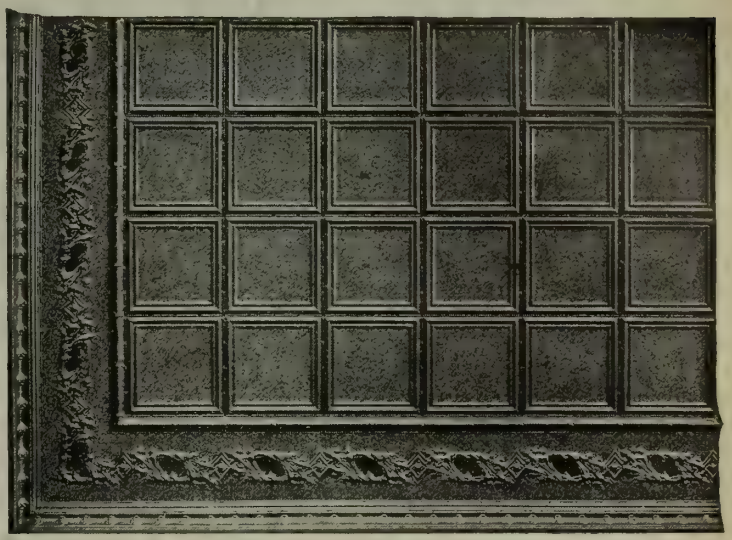
SIX PRIZES FOR WINDOW DISPLAYS

For the three best selling window displays shown in a city over 10,000 population, and for the three best in towns and villages under 10,000 population.

In each division there will be three prizes as follows: 1st, $5 in cash; 2nd, and 3rd, copies of "Hardware Window Dressing" (cloth bound) $2.50—making in all six prizes, totaling in value to $20.

To enter the contest send a clear photo of one or more Christmas windows, made up of articles usually sold in hardware stores, with a description and the name of the person who arranged the display. Photos must be mailed to us by December 31.

TWO PRIZES FOR HOLIDAY ADS.



Two prizes of $5 each are offered for the best newspaper advertisements about Christmas goods, such as cutlery, silverware, sporting goods, lamps, stoves, carpet sweepers, household goods or other holiday lines. Forward one or more clippings from your local paper to us, with the name of the writer of the advertisement, and the name of the paper it was clipped from. As in the window competition, a division is made, one prize being open to those in cities over 10,000 population, and another to those in smaller places.

With the ad. send a copy of any booklet issued, and a description of any special selling plans or display features used during the holiday season.

The awards will be made by experts, and will be announced, with reproductions of the prize ad, and windows, shortly after the close of the contest. All entries should be mailed not later than December 31.

Address: "The Editor HARDWARE AND METAL," 10 Front Street East, Toronto.

University Department of Commerce and Finance

University of Toronto Establishes Department to Replace Commercial Course—Two Year Curriculum to be Later Extended to Four Years—To Illustrate Business Principles and Methods—Graduates Entering Business Rather Than Professions.

The utilitarian conception of universities is broadening all over the world in accordance with the spirit of an age that is eminently practical. The mere aesthetic and idealistic are giving way to the concrete and the technical. The tendency is witnessed on all sides. The leaven of reform and improvement is working rapidly, permeating every avenue of education and, animated by the broad, tolerant spirit which characterizes it, the University of Toronto has added a new course to its progressive curriculum. It is one that will serve to make the institution more national in aspiration and usefulness and wider in scope and results. The course, that for the first time is presented by the great provincial seat of learning and designed to bring it into closer and more intimate relationship with the business and commercial life of Canada and its people—for after all we are a nation of workers—is known as the Department of Commerce and Finance. It replaces the old commercial course established a few years ago and is more extensive and thorough in its application, as well as more complete and comprehensive in its nature. For the present a two-year curriculum is announced, but it is intended eventually that the course shall run through a third and fourth year.

For years the MacLean trade papers have consistently and strongly advocated such a course for all our universities, and it is pleasing to record that the subject has at last received the attention that a matter of so great and far reaching importance merits, and a beginning made. In the inauguration of this move the University of Toronto is demonstrating that, under the guidance of President Falconer, the provincial seat of learning is growing more national in its work and worth and more in touch and sympathy with the development, spirit and expansion of the times than at any previous period in its long and honorable history. It is meeting the need and demand for a training for our young men that will fortify and equip them for the practical workaday world which surrounds them on every hand.

Object of New Course.

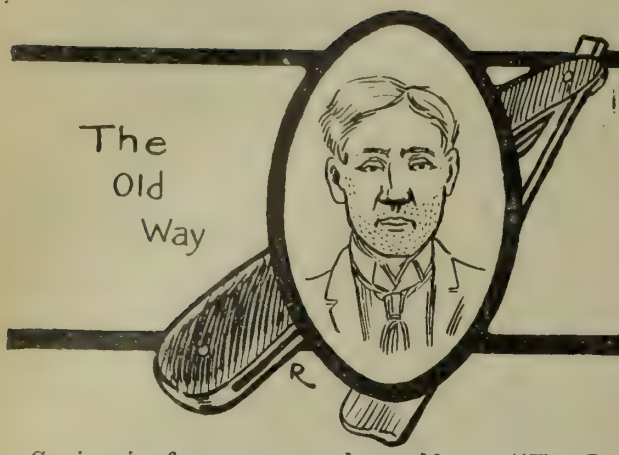
The object of the new course of Commerce and Finance is to fit young men for business—not in the sense of making them technical experts or masters of detail which, after all, can only be learned by actual contact and experience with things—but to give them a training in the illustration of principles and a mental discipline and grasp of affairs that will readily place them in a position to adopt and appropriate business methods and measures as soon as they leave college. It is well known that the trained and developed mind rules in all spheres of achievement and speedily comes to the front in all trying situations and difficult undertakings, in just the same way, that in technical success, higher standards and more efficient administration in any trade or calling the practical hand, the skilled arm and the quick eye have accomplished much.

Speaking of the new course, President Falconer said he could not as yet venture an opinion as to what advantage it would have upon the business interests of the country as the University was merely making a beginning at present, but he had observed that every year more and more graduates of the Arts course were entering business life instead of the professions, and the indications were that this number was likely to increase. The object of the University was to turn out well-trained men, thoroughly skilled and disciplined in a mental sense, who would view things on a broad base and be so admirably prepared that they would be in a position to become masters of their chosen calling, to realize its advantages and possibilities, and grasp its full meaning and significance. Some universities across the border have courses similar to that being initiated by the University of Toronto but such courses are open only to graduates and come under the head of post-graduate departments.

Business Men Consulted.

It is only after a thorough and extended series of interviews with leading business men, bankers, financiers and insurance men of the province that such a step is being taken. Dr. Falconer said that these interviews were on the whole satisfactory and many valuable suggestions of a practical character were offered. The faculty found it was desirable that if a young man was to realize the highest and best in any branch of business, he should begin at an age not later than nineteen. This was the general opinion of those consulted and accordingly a two-year course has been mapped out, at the end of which a diploma will be awarded as has been the custom in the commercial course which, as already mentioned, the new one is superseding. It is not intended however, that the student shall stop here but it is hoped that he will proceed to his degree in Arts. The diploma is granted him that he may begin his business career at the end of the second year of his course and that he may go on to his degree under the guidance of the University while engaged in business. In order that a young man may do this the lectures of the third and fourth year will as far as possible be given at times convenient to those students who are engaged during business hours and, on petition, exemption from attendance at lectures may be obtained in those cases where the student finds it impossible to be present.

A recent announcement issued by the University explaining the aims and purpose of the new department of commerce and finance, says: "Each year a number of graduates enter business for which they have found training in one or other of the honor courses of which political science and mathematics have afforded the greater opportunities, preparing for commerce, finance and other business occupations. A few years ago the University established the Commercial Course which has attracted a number of students every session, but the present time seems opportune for further advance, and accordingly the new Honor Course in Commerce and Finance will be begun in 1909-1910, with the object of providing training of educational value and instruction in branches of knowledge which are important in business. As in the Commercial Course, a diploma will be awarded to all those who complete the first and second years. The greatest freedom consistent with the maintenance of a uniform standard for the degree is permitted in the choice of options so as to meet the needs of students entering various branches of business."



An idea of the comprehensiveness of the course will be conveyed when it is stated that the scheme for the first two years includes English, Latin, physics or chemistry, at least one modern language, mathematics and history, with such commercial and financial subjects as elementary economics, money and credit instruments, mathematics of finance and insurance, commercial geography and accounting. Many subjects are eclectic so that the student, whatever end he has in view or whatever business he may choose for a career, will be strengthened and trained in these optional subjects, but the ones already mentioned are compulsory.

The subjects from which selections will be made to meet the requirements of each student, will include:

Modern history, ethics, religious knowledge, history of economic theory, history of industry and commerce, banking and corporation finance, national and local finance, transportation, statistics, the calculus of finite differences, the infinitesimal calculus, the theory of life contingencies, the science of government, commercial law, investments, partnerships and corporations, company law, French, German, Spanish, physics, chemistry, geology, mineralogy.

Subjects Afford Wide Training.

At a glance it will be seen these subjects are such as to afford a scientific training in the theory of the different departments of business, and young men who look forward to banking, insurance, accountancy or actuarial work, as well as those who intend to engage in other branches of commerce or manufacturing, will find, among the options provided, an appropriate theoretical training. Judging by the results of the past and the outlook for the future there seems no doubt but that the new course is bound to become popular and well patronized, and to all young men, who take it up with the right attitude and object in view and apply themselves seriously and industriously to the work and subjects in hand, that it will be practical, useful and beneficial. In truth, it may be said that the end justifies the means, and that the utilitarian application of the University is nearer to-day than ever before.

Gillette's Safety R

**Interesting magazine sto
brings prosperity—Simp**

EVERY MAN SHOULD KNOW THE

Coming in from my usual weekly jaunt on a Friday night, I boarded the train at London. Tired and dispirited, I wanted to settle down for a quiet read, but every seat in the passenger coaches was occupied. Reluctantly, I made my way to the smoking compartment in a last vain hope, and there I found a vacant spot. I do not indulge in the weed myself, and knew that when I landed home with my clothes saturated with smoke, so to speak, I would hear from my wife. I was, however, not going to ride standing, and it was a case of Hobson's choice—the smoker, or nothing.

I have often heard of the pleasant informality and agreeable companionship of those who woo the pipe, and how tobacco—so kindred in its relations—levels all barriers and makes of its devotees that "fraternity of man," over which poets in past ages have sung. Opposite me were two men that I did not know, although I judged from their general appearance that they were apostles of the grip. One was a rather young, smooth-faced, dark-eyed fellow, with a pleasant speech. His manner was interesting, his smile engaging. Evidently he had the art of mixing with men and feeling perfectly at home. Neatly dressed, he was smoking in an attitude of leisurely indifference, and the aroma from his cigar convinced me that it was not a cheap brand. He gave every outward indication of personal prosperity, and of having booked many orders for his house that week. His companion was considerably older, rather shabbily dressed, and wearing a soft felt hat, that had evidently been dug up in the woodshed. His eyes were heavy, his boots dirty, his linen soiled, while his face bore evidence that for at least three days it had had no acquaintance with a barber or razor. He seemed restless and gloomy.

"Well, this is my last trip for the house," he remarked somewhat disconsolately, as he filled a briar pipe and proceeded to take a pull.

"You don't say," declared his companion with interest. "What's up now, Bill? You look as if you had a bad week of it."

"Yes, I sent in my resignation three weeks ago—was asked to do so—and, of course, it was accepted. Why the manager called upon me to hand in my retiring ticket I don't know."

"Can't you give a shrewd guess?" asked his friend suggestively, calmly surverying the seedy looking Bill from head to foot.

"No, I can't surmise at all," was the response.

"Who have they got in your place?"

"Oh, some dude of a fellow about twenty-five, who has not enough masculinity about him to raise a whisker. He's about as smooth a guy in manner

KING C. GILLETTE
Inventor of the Gillette Razor

and speech and face as you ever ran across. Why he looks like a fashion plate—not a salesman, rough and ready for any emergency."

"But see here, Bill, you are not down on him because he wears good clothes, a clean collar, polished shoes, and shaves every morning, are you? You must have something more than that against him to talk the way you do."

"Oh, no, I suppose not, but I tell you, Mr. Herman Peters, I never had time for any flummy diddles," he growled.

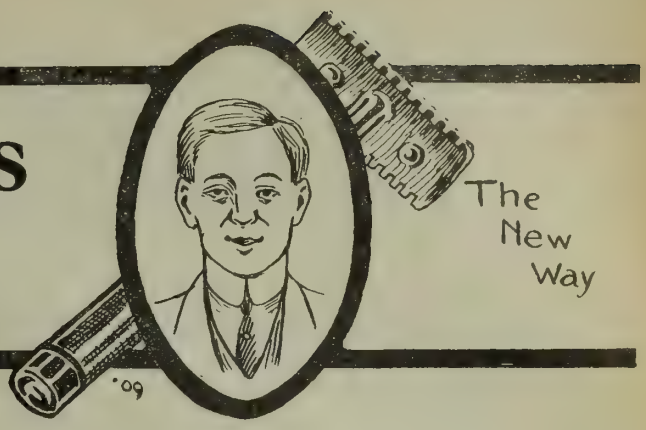
"But you will have now," answered Herman, and his reply was full of meaning, even to the dejected Bill.

"Explain yourself, sir," retorted the other with some heat.

"Well! I will. I was told by a man in the service of your firm that you were getting a big salary—$2,800 a year—and were a good salesman, but you have been warned several times to spruce-up—that you were not representing a rag establishment, or a hair-growing tonic, and yet you have gone on persistently and indifferently. My informant said that warnings seemed to have no effect, and now you find yourself out in the cold."

"Well, so long as a man feels comfortable it doesn't matter much how he looks, does it?" and Bill finding no confirmation in the eyes of the man next to him pulled more vigorously than ever at his strong smelling pipe, and shot an inquisitive glance at me.

"I don't agree with you, sir," I replied, "stranger though you are to me, and I don't want you to interpret my remarks as in any way personal. I have always found that prosperity begets prosperity, that if you look as if you are run down at the heel, people are naturally inclined to think so. A man is often as he feels. I used to be an advertising solicitor before I got my present job, and my firm sent me over to England one summer to get some business there. I wore a hard felt hat, a turn down collar, and a comfortable, easy fitting suit of clothes. I was presentable enough, but I found that I could not get in to see many of the big managers, whose ear I wished to reach. On one pretext and another—some of them decidedly flimsy—I was turned down. The situation was distressing, and I was chagrined. Then a friend met me one day and told me the reason—that, when I was in another spot, I must do as they did: 'Don a topper, put on a Prince Albert, patent leather shoes, a pair of suede gloves, and see what a transformation there will be in your reception.' I did so, and sure enough, thus rigged out, I secured the entree to many private offices, admission to which had previously been denied. Yes, sir! it worked like a charm."



"That may go all right across the pond," answered Bill, "but things are different in this democratic country. I never had any time to personally titivate."

"Well," remarked Peters, "I take fully three-quarters of an hour every morning to complete my attire."

zor Again Triumphs

f truth—How Gillette's Razor
le of how to win life's battles

TORY "IN THE SMOKING CAR"

"You might be calling on customers and corralling several good orders in the time it takes you to dress," was all the sympathy he got from the older drummer.

"Oh, I get up early and follow a routine," continued Herman, "I polish my shoes, wash, shave, and take a cold plunge. Lost time—not a bit of it. When I sally forth I feel as fresh as a daisy."

"Sure," said I, chiming in, "it is as natural now for me to shave every day as it is to wash, button my collar, or adjust my necktie. Many men think that scraping the fuzz off their faces is an accursed nuisance. They are inclined to let it go rather than attend to it.

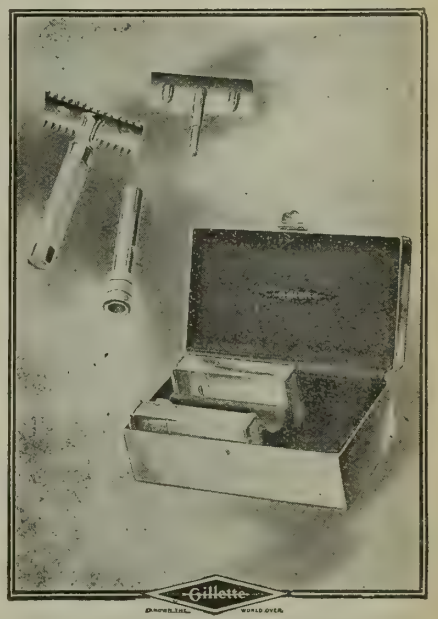
Pocket Edition
Basket Pattern—Metal Case, Velvet Lined
No. 501 Triple Silver Plated Case and Razor $5.00

They have no regularity about anything. I used to look upon the procedure in very much the same way."

"What caused you to change your mind?" pursued Bill, who was evincing more interest in the conversation.

"Well! it was this way: I am now fifty-four years old, and have been thirty on the road. I used to visit barber shops whenever I got a few minutes, and the barbers wheedled me into the belief that I could not shave myself, although I often thought I would like to do so. They told me my beard was awfully wiry and tough, and my skin too soft, and tender. One day—it was dreadfully hot—when evening came, I was pretty well fagged out. I sat down to do a little thinking, and while ruminating over the past I formed a definite resolve.

"Well, to go on with my yarn, I found that averaging the time taken at twenty-five minutes a day for three hundred days in a year, and extending over a period of thirty years, that I had just spent 3,750 hours in tonsorial parlors. Reckoning the ordinary working day at eight hours, I was appalled to learn that I had passed 470 days, or a year and a half of my life in a barber shop, not to mention the cost. I thought what an awful waste of time, what a sacrilege of opportunity! Then I bought a good safety razor, found that I could clean my face in seven minutes, and it was done for the day. I had not to be the servant of any man, or await his beck and call. I did not like the thing at first, naturally I had a prejudice against it, but I gritted my teeth and said 'if so many others find you a true friend, I am sure that I can.' The fourth morning I got on to the hang of the thing, and in a week I was an expert at its use, and from that day—three years ago to the present—I have never let a barber do anything for me except to shear my locks, and I have never missed my morning shave. It is just as natural for me to pick up that little, keen-edged, sanitary instrument, as it is for me to put on my shirt—and no more trouble. I never invested five dollars that yielded me so much happiness and satisfactory results.



"And what's more, if anyone told me that this little device would prove such a friend, I wouldn't have believed him. I tell you, Bill, I was so interested, that when in Montreal, my attention was attracted to the Gillette factory. There and then I determined to visit it. The visit certainly explained the perfection of my little safety. The material used and the workmanship was a revelation to me. Every part used was a proven necessity, and so finished as to insure a perfect razor.

"The Gillette people make some pretty strong statements in their advertising, but I can tell you I do not believe any of them are exaggerated, either about their razor or their factory."

"What make did you say it was?" interrogated Bill, who had become immensely interested in my personal narrative.

"It was a Gillette. Why do you ask?" I ventured.

"I say, boys," he exclaimed as the trainman shouted Woodstock, "I have to leave you here. I am about to turn over a new leaf."

Indestructible Standard Razor
Metal Case, Velvet Lined
No. 460B Nickel Plated Case, Triple Silver Plated Razor $5.00

"How's that?"

"I'm going up town to get one of those articles you just told me about, and also a new job."

When I met him two weeks later, I scarcely recognized my former casual smoking car acquaintance. He was radiantly happy. "Say," he shouted across the street, "I got both those things. I'm a new man now."

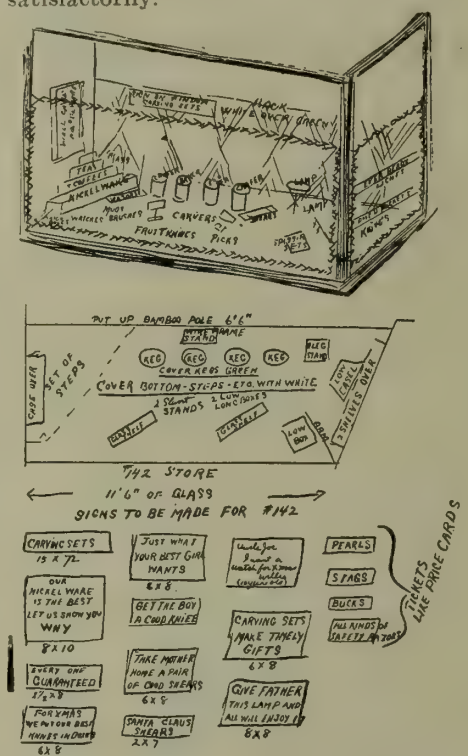
Construction of a Christmas Window Display



Window Display Methods of a Hardwareman Who Plans His Work Ahead—Displays Adapted to Specal Seasons as They Come Along—Rough Sketch Prepared Showing Where to Place Goods—Helps in Speedy Arrangement of New Display—Seasonable Displays in Canadian Stores.

Nelson S. Haskell, who looks after the window trimming in a New England hardware store, has a system to his work which ought to suggest ideas to Canadian hardware clerks who take an interest in making their windows sell goods. One of his last Christmas windows was shown in the Iron Age together with the accompanying sketch prepared beforehand to help in arranging the display with as little loss of time as possible. By having his ideas mapped out and his material ready he can go ahead rapidly with the work without wasting time in studying the general arrangement or wondering what he should put in next.

Mr. Haskell usually takes pieces of wrapping paper and jots down the larger and more important articles or lines to be included in his display, sketching the idea out roughly and adding details as they come to mind. Sometimes, of course, the sketch is drawn over a number of times. He then takes up the matter of signs, noting what will be required, and also makes a note of and has constructed any boxes, stands or steps of special shape. In the store is a large stock of such stuff on hand, for everything is saved that promises to be of future use. There is a place reserved in the cellar for these supplies and in a closet are two racks, one for home made signs and one for display cards furnished by factories.

Saving Time and Labor.

The practical features of this method are obvious. The drawing does not need to be carefully done, and always saves much cogitating and considerable time and labor on "window day." The boy has the window cleaned out and washed by 10 o'clock in the morning, and usually noon sees it fully dressed if two men are detailed to work on it. Mr. Haskell has found that after a little experience, junior clerks can dress the windows and carry out his ideas satisfactorily.

Rough Sketch for Window Display.

Making a Holiday Window.

Perhaps the most distinct and helpful information regarding Mr. Haskell's practical methods may be gained by a study of the reproduction of one of his rough plans. In addition to the rough plan and list of signs to be made, shown in the sketch, a list of the price cards required was also made up, which was as follows:

Price Cards.

$ .05	1
.10	4
.15	2
.20	2
.25	15
.40	1
.50	12
.60	2
.65	1

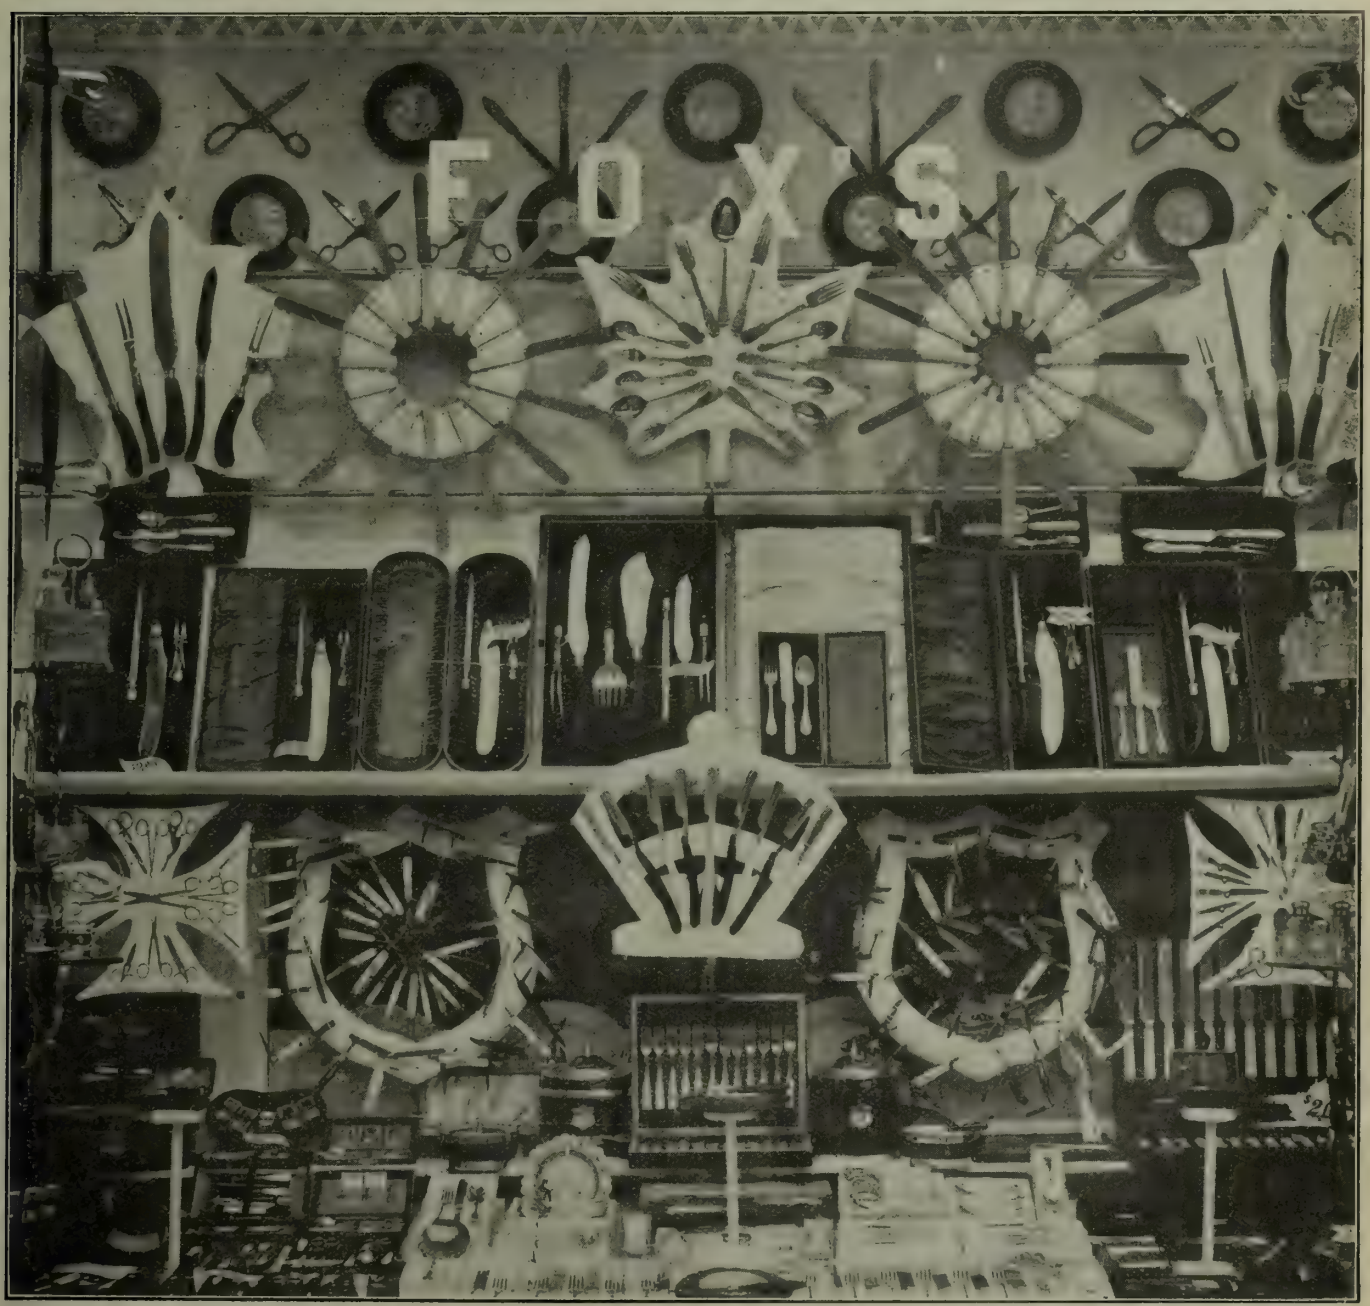
6.50	1
8.00	1
8.50	1
10.00	1
12.00	1
16.00	1

A great deal of stress is laid on the matter of signs and price cards, which are carefully prepared, freely used and are found to be very valuable in increasing the selling power of the display.

SEASONABLE HUNTING DISPLAYS.

Creeper & Griffin, Owen Sound, a young firm who have built up a large trade in a short time, recognize the advantage of making seasonable window displays. They have an attractive



Hunting Window by Creeper & Griffin, Owen Sound. Thanksgiving Display of Marshall Hardware Co., Medicine Hat.

store front with two good-sized windows, the top being fitted with prism glass for lighting the store.

Two weeks ago they devoted one window to lumbermen's goods, saws, axes, etc., and at the same time made the hunting scene display reproduced in the accompanying illustration. It can be criticised from the standpoint of being overdone, as no hunter in recent years has been fortunate enough to meet so many deer, moose, etc., peering out of the bush—half the number of deers' heads would probably have been more effective, especially as figures of wolves, wildcats, squirrels and birds were also shown. The general idea of the window, however, is good, the brush being thick enough to impress the forest scene upon the mind and make the window realistic. Good taste is also shown in confining the display of hunting goods to three or four guns and rifles, a couple of hunting knives and a few boxes of ammunition. Too often the effect of a scenic window display is spoiled by the attempt to display too many articles from stock or by including too many signs or price cards.

The average customer likes to know what he will have to pay for a thing before he enters the store. This is but a natural desire on his part, and it is only business to recognize it. When the display is accompanied by a scenic arrangement, this rule does not apply. The elaborate scenic effect does not appeal so much to the business as to the sympathetic and emotional side of human nature. Then, price becomes a secondary consideration, and its intrusion amidst such surroundings is apt to jar. The object of the scenic effect is to create a desire. If it succeeds in this its aim is accomplished, and very satisfactory sales will result in due course. The effect of all displays is greatly enhanced by giving them a solid background.

Holiday Cutlery Window, Dressed by W. B. Christopher, with Fox's Cutlery Store, Victoria, B.C., last Christmas.

THANKSGIVING DISPLAY.

Herbert S. Doan, who has arranged some fine displays for the Marshall Hardware Co., Medicine Hat, put together a novel Thanksgiving display in which he used fruit, grain and vegetables.

The back of this display was black sateen with white moulding for borders, and worked across the back with white cotton rope was the word "Thanksgiving." Four inch tile painted white were used in the centre and on either side wheat projected from the top of these. Yellow sateen cloth covered the ground

of the display. Carvers, dessert knives and fork sets, manicure sets, and similar lines were shown, vegetable and fruit lar lines were shown, vegetables and fruit being mixed through the display. two upright arches of lattice work were painted white and trimmed with corn and apples. In the lower and front of the window, silver spoons were stood against brass extension rods.

The arches were serviceable in attracting attention to the display, but in the photograph they detract from the goods displayed and prevent the goods in the background from being seen to best advantage.

CUTLERY WINDOW AT VICTORIA.

W. B. Christopher, salesman in Fox's Cutlery Store, Victoria, B.C., has a very shallow window to work on but in the accompanying picture of his last Christmas display it will be seen that he has overcome this by the use of shelves and hanging dsplays, gotten up in the form of shields, maple leaves, crosses, etc. An elevated platform or triangular stand in the base of the window on which the small articles of flat ware could be shown to better advantage, would have improved the window. The display, on the whole, is commendable and contains many ideas for those who are planning holiday windows for ths season's trade.

Price tickets are used on some of the lines, but in such a display as this, made at the time when the streets are lined with people intent on present giving, it is questionable if too many price tickets can be shown. Certainly, if the tickets are small and do not hide the goods, it would be good policy to have the price marked in plain figures on each article of case goods, each shield, and each sample shown.

HARDWARE PATENTS.

The following is a list of Canadian patents issued by the Canadian Patent Office on October 17, 1909, relating to hardware and metal, and furnished by Fetherstonhaugh & Co., 5 Elgin St., Ottawa.

121273. A. P. Boyer, Goshen, Ind., fireless cookers.

121308. H. K. Hillon, Omaha, sash locks.

121312. M. Johnson, Minneota, Minn., animal traps.

121313. W. Jones, Prince Albert, cable clips.

121317. G. F. Kilmer, Nogales, Arizona, nut-locks.

121334. J. H. Miner, Lumberton, Miss., insertible saw-teeth.

121339. K. A. Owen, Ottawa, cooking utensils.

121372. F. C. Tambling, Stevens Point, Wis., lock-nuts.

121385. F. A. Hoya, Milwaukee, self heating hydro-carbon sad irons, Modern Specialty Co.

H. Oldland, Fernie, B.C., has secured the contract for installing the sewerage system at Macleod, Alta.

Business Methods of Canadian Hardwaremen

Novel Window Display at Vancouver—Use of Catchy Terms in Making the Store Popular—Encouraging Farmers to Trap Fur Bearing Animals—Clerks Using Saving Accounts—Methods of Western Merchants.

A LARGE ADVERTISEMENT.

Boissevain, Man., Oct. 28.—A recent advertisement gotten out by Johnston Bros., of Boissevain, has been commented upon freely here. In addition to their regular ad. in the local paper, 6½ x 10½ inches in size, in which they announced shooting supplies, food choppers and washing machines, quoting prices on each line shown, they had a full page insert, announcing Sherwin-Williams paint, sewing machines, cream separators, stoves and ranges, electrical fixtures, etc. Johnston Bros. have stores at Boissevain and Minto, and it was a good fall announcement for them.

W. G.

CLERKS USING SAVINGS BANKS.

St. John, November, 2.—"My clerks all keep a savings account," said a St. John retailer recently. "I make it a condition in employing a new man, that he deposit part of his salary every week. They soon get in the habit of it and I find it the surest way to prevent debt and dissipation among my employees."

This is a suggestion which will help both employer and clerk, and harms no one.

C. G.

CARE IN ADVERTISEMENTS.

Montreal, November 2.—Many merchants make the mistake of trying to put the names of half their goods in an advertisement. One of the most judicious advertisers among Montreal retailers recently commented on this fact. "I always specialize one or two good lines each issue and devote my space to their exploitation. It pays best in the end. People haven't time to use a magnifying glass on small type items."

A. B.

TRAPPING SCENE IN WINDOW.

Brantford, November 2.—With the first snow of the year, just a few days past, the call of the trapper is heard by the enthusiasts all over the province. Never before have fur prices been so high, and from the present indications it would seem as if the coming season would be a good one—for the hardwaremen and the trappers, if not for the fur-bearing animals.

A. Ballantyne, the Colborne street hardware dealer, ever to the fore with new ideas in window trimming, this week shows a window that is calculated to stimulate interest in the pursuit of the wily fox and mink. The window at first glance, shows a corner of a bush, near which flows a small running stream. Hidden behind the board fence, typical of many farm fences, and screened behind friendly cedars, a red fox is seen peering through the palings, with an eye awaiting any signs of danger from his eternal enemy, the dog, accompanied by its master. In the foreground, a mink is seen coming out of the water, making for its "nest" in the water-worn side of the bank, only to find a steel trap set cunningly before the entrance to its abode. Overhead is a row of steel traps, with dragging chains.

On the boards of the fence are painted the prices for various pelts by local dealers, ranging from 50c to $1.75 for skunk, to $2.50 to $3 for fox. A sign overhead bears the words, "Little trouble, little expense, good profits." The window was designed and trimmed by George Blott, and reflects much credit upon him, as well as upon the Oneida Company, who supplied the idea.

A. W.

CARTOON WINDOW DISPLAYS.

Vancouver, October 30.—Tasteful decoration in windows marks the hardware stores in this city. Of late, special attention is being paid to this important display feature, and the windows of the hardware stores are as attractive as any of the high class dry goods stores, and second to none in the city. Time was when it was enough for a hardware dealer to place anything in the window, but it is being generally recognized that even in such staple lines as hardware there is business that can be secured with a little going after, and there is nothing like an attractive window to catch the eye. It is an advertisement pure and simple.

Well arranged exhibits are constantly seen in the windows of J. A. Flett, George Hunter, and others, but it is doubtful if more "local color" is put into displays than shown by W. H. Jeffery, dresser for McLachlan Bros. This week he has a Thanksgiving window, in which current topics of discussion, such as the Second Narrows bridge, etc., are worked in to advantage. The critical artist might find fault from a technical point of view, but as an eye-winner it must be said that it fills the bill. McLachlan Bros. deal in stoves and general hardware, but this window is a sort of specialty and is being looked for, not so much to see what goods are being used in the make-up, but simply as a sort of cartoon. For that is what it really is, a take-off on current topics, and considerable ingenuity is displayed in utilizing trade articles in the construction.

Specialties are always in line, and it is noticeable that many dealers are each taking up a particular line. For instance, with Flett's it is a Saturday afternoon display of tools, when the

workingman has a chance to see them, and a sporting goods window, always with prices plain. With George Hunter, it is malleable ranges and builders' hardware, and with Hodgson & Stearman, it is also malleable ranges. These are only instances, but the success these down town dealers have had in pushing the sale of a specialty, with general goods as a follow-up, show what can be done in making a feature of some one thing. With any special article thus featured must go an uncompromising guarantee, for it is only in absolute satisfaction that a good name can be securely obtained. It may be easy to effect a sale, but the point is to hold the customer steadily for general trade.

R. B. B.

THANKSGIVING DAY SALE.

Brantford, November 3.—Watt & Squire, who follow the departmental store style of advertising, had a three column "Two Day Thanksgiving Sale" a week ago, about two-thirds of the ad. being shown in the accompanying illustration. It began: "Saturday Savings—Big two-day Thanksgiving sale—Thanksgiving time for you. Look over the list—it will save you money. The prices are good for Saturday and Tuesday only." At the bottom the display read "The Big Hardware Store, Watt & Squire, Brantford," and these two catch phrases in rule work: "See our Windows," and "Watch for Quality." This class of advertising holds the trade in town and is a good feature in meeting the competition of Toronto and Hamilton departmental stores.

W. E.

ADVICE FOR THE JUNIOR CLERK.

Ottawa, Nov. 2.—"Did you see those signs and booklets? Well, they are invoiced and certainly came with the goods. They must be somewhere!"

The dealer showed the invoice, upon which was plainly typewritten the fact that some special advertising signs and literature accompanied the shipment. A search through the pots, pans and small boxes failed at the time to reveal the articles, and instructions were issued to look in the cellar, where the packing had been thrown.

Is the fault with the boy? Let the boss take him into his private office, or to some quiet corner of the store, and there tell him he expects him to take an interest in the business, that a certain work is his particular portion and on the thoroughness of his work depends his ultimate success. Make the boy feel that the duties, though apparently menial, are essential to progress, and that his work is just as valuable to the business, proportionately, as the highest salaried clerk. He'll see it and the store will be benefited by it. Boys must keep their eyes open, concentrate their minds and use their brains and hands for the purpose for which they were provided.

T. E. M. H.

A Saving in Buck Saws—The popular Happy Medium, 30-inch tempered steel blade, filed and set ready for use, vermillion painted hardwood frame, sale price 41c

Use Jap-a-Lac—Wears Like Iron—Sixteen Colors

Do You Carry Your Lunch? If so, here is a chance to buy a first-class Lunch Box at a low price. Made of special fibre, waterproof, sanitary, indestructible, cowhide, strap handles, reinforced ends, sale price 12c

Why Pay More when you can buy one of these Handled Axes so cheap? Vermillion painted head, inlaid steel bit, regulation length handle, regular $1.00 value, sale price..... 69c

Reduced Reproduction of Ad. of Watt & Squire, Brantford.

Appeal of Convicted Stove Pedlars Dismissed

Dundalk Magistrate Imposed Fines and Conviction Sustained After Two Appeals Were Made—Text of the Law in Force in Grey County.

A final decision has been reached in the now famous Van Norman stove peddling case, a decision that will be of great importance, not only to the retail trade in this country, but throughout the province. The legality of the county by-law representing licensing pedlars has been established, and the entire costs saddled on Van Norman and his partners. The case has been watched by the retail trade throughout the province, as a number of by-laws passed by different counties have not stood the test of the courts.

It will be remembered that a gang of men and three teams of horses went through Grey County near Dundalk last July, selling stoves and ranges. The gang was headed by a man named Van Norman, and they claimed to be agents for the Western Foundry Co. They were brought before Magistrate McGregor, of Dundalk, for selling without a license, and fined $20 each. In their defence they tried to construe that they had an agreement with the manufacturers, and were only taking orders which were to be delivered later.

Van Norman appealed to the High Court judge at Toronto, and at the same time moved to quash the by-law, on the ground that the county had not power to pass it. The county defended the proceedings, and both appeals were dismissed with costs.

Again he appealed to the Divisional Court, but this was thrown out on the ground that he had not leave to appeal. Then he moved to be allowed to appeal, but was refused. Van Norman will have to put up all costs, and the legality of the county by-law is established. MacKay, Telford & Grosch, looked after the county's interest; while I. B. Lucas, M.P.P., Markdale, represented Van Norman and his associates.

The following is the text of By-law No. 726, under which the conviction was made:—

By-law to Regulate Pedlars.

1. No person shall within the County of Grey, act as a pedlar, hawker, or petty chapman, or carry on petty trades, or go from place to place or to other men's houses on foot or with an animal bearing or drawing any goods, wares or merchandise for sale, or in or with any boat, vessel or other craft, or otherwise carrying goods, wares or merchandise for sale, without having first obtained a license to do so, in the manner hereinafter mentioned:

Provided always that no such license shall be required for hawking, peddling or selling from any vehicle or other conveyance any goods, wares or merchandise, to any retail dealer, or for hawking or peddling any goods, wares or merchandise, the growth, produce or manufacture of this province, not being liquors within the meaning of the law relating to taverns or tavern licenses, if the same are being hawked or peddled by the manufacturer or producer of the goods, wares or merchandise, or by his bona fide servants or employes having written authority in that behalf; and such servants or employes shall produce and exhibit his written authority when required so to do, by any municipal or peace officer; And provided also that nothing herein contained shall affect the powers of any Council to pass by-laws under the provisions of Sections 579 and 582 and clause thirty of Section 583 of the Consolidated Municipal Act of 1903; and provided also that nothing herein contained shall apply or be in force in any town in the County of Grey, not separate from such county for municipal purposes while a by-law of such town to carry into effect the purposes or objects of clause fourteen of the said Section 583 of the Consolidated Municipal Act of 1903 remains in force.

(A) The word hawkers in this section of the by-law shall include all persons who, being agents for persons not residents within the County of Grey, sell or offer for sale, tea, dry goods, watches, platedware, silverware, furniture, carpets, upholstery, millinery or jewellery, or carry and expose samples or patterns of any such goods to be afterwards delivered within the county, to any person not being a wholesale or retail dealer in such goods, wares of merchandise.

2. Any person desiring a license enabling him to ast as a hawker, pedlar, petty chapman, or otherwise, as in section one of this by-law mentioned, shall first pay to the county treasurer of the County of Grey, for the general uses of the county, for licenses required under this by-law as follows: The sum of $125 for a license for a person using a two-horse wagon or vehicle; the sum of $100 for a license for a person using a one-horse wagon or vehicle; the sum of $60 for license for a person using a wagon or cart or other conveyance, drawn or pushed by the person; and the sum of $50 for a license for a person traveling on foot and carrying a pack, box, bundle, basket, or valice. And the county treasurer is hereby authorized and required, upon payment being made of the proper fee, to issue a license to any such person applying therefor, to license such person to act as a hawker, pedlar or petty chapman or otherwise, as in section one of this by-law mentioned, within the County of Grey.

3. Every person who has obtained a license under the provisions of this by-law shall at all times while carrying on his business have his license with him, and shall, upon demand, exhibit the same; and upon failing to exhibit the same when demanded, shall, unless the same is accounted for satisfactorily, be liable to a penalty of not less than one dollar, nor more than five dollars, for each offence, together with costs, recoverable before a Justice of the Peace; and it shall be lawful for the Justice of the Peace convicting as aforesaid to order that in default of payment the offender be committed to the common gaol of the County of Grey, there to be imprisoned for any time, in the discretion of the convicting justice, not exceeding twenty days, and with or without hard labor, unless such penalty and costs including the costs of the committal and conveyance of the offender to the common gaol are sooner paid.

4. All licenses issued under this by-law shall be in force for one year from the date of the issuing thereof, and shall be under the corporate seal of the county, and shall be signed by the county treasurer.

5. The county treasurer shall, not later than the first day of May and the first day of November, in each year, prepare a list of the parties who have taken out licenses under this by-law, together with their respective post office addresses; and the county clerk shall have a sufficient number of such lists printed and distributed throughout the county to all county constables, postmasters and justices of the peace within the County of Grey.

6. Every person guilty of a breach of any of the provisions of this by-law, excepting as provided for in Section 3 of this by-law, shall, upon conviction, before any Justice of the Peace having jurisdiction in the premises, forfeit and pay at the discretion of the said Justice of the Peace making such conviction, a penalty not exceeding the sum of fifty dollars, nor less than twenty dollars, for each offence exclusive of costs; and it shall be lawful for the Justice of the Peace convicting as aforesaid to order that in default of payment of such penalty and costs forthwith, or within a time limited by such Justice of the Peace, such penalty and costs shall be levied by distress and sale of the goods and chattels of the offender, and to issue a warrant of distress therefor, and to order that if sufficient distress cannot be found out of which such penalty can be levied, the offender be imprisoned in the common gaol of the County of Grey, withor without hard labor, for any period not exceeding twenty-one days, unless the said penalty and costs, including the costs of the distress, and of the committal and conveyance of the offender to the said gaol, are sooner paid, and to issue a warrant of committal therefor.

7. One half of every penalty levied under the provisions of this by-law shall go to the informer or prosecutor, and the other half to the county treasurer, unless the prosecution is brought in the

name of the corporation of the County of Grey, in which case the whole of the penalty shall be paid to the county treasurer.

8. In the event of there not being sufficient distress out of which the costs of said prosecution can be procured, the county treasurer is hereby authorized to pay to the party securing the conviction the sum of $10, on the certificate of the Justice of the Peace making the conviction—but this shall not apply to the high constable of the county.

9. All by-laws heretofore passed by this council relating to hawkers, pedlars and petty chapmen, be and the same are hereby repealed.

10. This by-law shall come into force and take effect on, from and after the passing thereof.

Passed in open council this 28th day of November, A.D. 1908.

GURNEY FOUNDRY IN B.C.

Edward Gurney, president, and E. Holt Gurney, sales manager of the Gurney Foundry Co., Toronto, who are on a trip to the Pacific coast, have been looking over the western field with a view to the establishment of a branch foundry at Vancouver or New Westminster. Interviewed by the New Westminster Columbian last week, Mr. Edward Gurney said:

"Yes, we are considering establishing a branch of our factory at some point in the west. The question of its location depends largely on the railway facilities available. We have been looking over your city and you may say that it has favorably impressed us. It is inevitable that we will have to establish a branch factory somewhere in the west if we intend to secure a fair share of the rapidly growing business of this new country. Just when or where that factory will be built is a question for the board of directors of our company to decide. I will report to them the result of my observations when I return."

W. H. Carrick, vice-president of the company, seen by Hardware and Metal, stated that as yet nothing had been done about establishing a branch foundry on the coast but the matter might be considered after Mr. Gurney's return to Toronto next week.

HARDWARE LETTER BOX

Any questions on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

Illustrations for Ads.—Pow & Wilcox, Tillsonburg, ask for the names of firms selling small electrotypes for use in newspaper and circular advertising.

The David Williams Co., 14-16 Park Place, New York, and the National Hardware Bulletin, Argos, Indiana, can supply catalogues and prices.—Editor.

Importance of Knowing How to Figure Profits

Should They be Figured on the Sale or Cost?—Percentage of Profit in Relation to Cost Expenses and Selling Price—Proper Methods Earn Dividends Just as Well as the Selling Department.

By Howard R. Wellington.

Is not the customary method of figuring profit based to-day on the net cost? And yet, is not every other percentage, such as commission, discount, allowance, etc., figured on the selling price? If we are to make a financial success in any business, it is absolutely necessary that the correct basis of figuring percentages of profit, expenses, discount, etc., must be adopted from the first. We sometimes look upon our offices as a necessary but burdensome expense, but the office, if equipped with the proper methods and records, earns dividends for the business as well as the manufactory or selling departments.

Nine times out of every ten, the business which does not succeed can trace the cause to the fact that somewhere in the organization or in the application of principles, there has been either a lack of system or an erroneous interpretation of certain standards in regard to percentages of profit and expense. Every merchant should aim to get his business on a basis where he can tell at once, first—whether he is making or losing money; second—how much is made or lost during a period; third—if a loss, where the leakage has occurred; fourth—what percentage his expenses, etc., bear to his total sales.

Another View of Gain.

Do the profits of one department in your store conceal the losses of another? Is there a difference between the gain as applied to, say, increased population, and the percentage of profit as applied to money transactions?

We believe there is. For instance, the population of a city increases from 40,000 to 60,000—what is the percentage of gain—50 per cent.

We say that we make 25 per cent. by adding 25 cents to every dollar of cost, whereas the percentage of profit is only 20 per cent. by figuring percentage of profit on the sales.

Now, which is right? Should not the percentage of profit and the percentage of cost of doing business be figured on the same basis?

The cost (net cost) usually means invoice price, plus cost of laying goods down in store, and between this cost and the selling price, items such as rent, insurance, salaries, salesmen, etc., must be provided for. Sales totals are always recorded by the merchant, and used for comparison from year to year. Cost totals for the goods sold are not as a rule recorded, so that it is very difficult to figure percentages on other than sales totals.

Salesman's Commissions.

We sent a representative out on the road on a commission of ten per cent.; his commissions are figured always on his net sales.

Is it not reasonable then, to figure percentages of profit on the net sales?

We are not laying down any rule to be followed in this connection, but are simply presenting this matter from different view-points so that the reader may adapt himself to the correct method of figuring his percentage of profits.

A man sells an article for $12.50 which cost him $10, and basing his percentage of profit on the cost, figured that he was making a profit of 25 per cent. At the end of the year the sales totalled $20,000, yielding a gross profit of $5,000, but his books only show that $4,000 has been made, or a percentage of 20 per cent. on the sales of $20,000.

Another Example.

A business is transferred to a joint stock corporation. Four per cent. is added to the cost of all goods to cover freight, insurance, etc., or to obtain "cost laid down." The goods are inventoried at the advance of four per cent., but the new company arranges to purchase the stock at invoice cost. Now, what is necessary under such circumstances? The goods must be reduced to cost, for if we add four per cent. to the invoice cost and deduct the four per cent. to obtain invoice cost, the result will naturally be less than original invoice cost.

Table for guidance of merchants in figuring percentages of profit:

16 2-3 p.c. added to cost is 14¼ p.c. profit on selling price.

20 p.c. added to cost is 16 2-3 p.c. profit on selling price.

25 p.c. added to cost is 20 p.c. profit on selling price.

33 1-3 p.c. added to cost is 25 p.c. profit on selling price.

40 p.c. added to cost is 28½ p.c. profit on selling price.

50 p.c. added to cost is 33 1-3 p.c. profit on selling price.

100 p.c. added to cost is 50 p.c. profit on selling price.

We shall be glad to hear from readers in regard to the principles outlined, and will devote another page to the discussion if necessary.

HOLIDAY COMPETITION.

Announcement is made on another page of a number of prizes being offered in competitions open to Canadian hardware clerks and merchants.

Holiday window displays are now a feature in the business life of every progressive merchant, and to encourage the window trimmer this paper offers three prizes to the senders of the three best photographs of hardware windows taken during the holiday season in cities over 10,000 population, and three additional prizes for the best three sent in from hardware stores in towns under 10,000 population.

Two prizes are also offered for the best newspaper ads. announcing holiday sales of goods usually sold in hardware stores. As in the window display competition, a division is made between the large cities and small towns, one prize being offered for each division. It was originally planned to divide the competition between newspaper ads. and booklets, but as first prize has been won in the last two competitions by city contestants, it has been decided to confine the two prizes to newspaper advertisements and give ad. writers in the smaller places an equal chance with those in the larger cities.

Hardware merchants will do well to draw the attention of their window trimmers and ad. writers to these competitions. It cost nothing to become a contestant and while the prizes are not large, they are worthy of competing for.

Even of greater importance than the prizes, however, is the honor and publicity secured by the winners. Jobbers and manufacturers recognize enterprise in window and newspaper advertising and those brought to the front as being the best advertisers secure publicity which is worth striving for.

MAY NEVER BE ENFORCED

Regarding the "Extra Provincial Corporations Act" of Manitoba, the date of enforcement of which has been postponed, as announced in last week's issue, a high authority of the Manitoba Government in discussing the matter with this paper, stated that "it is true the enforcement of the penalty clause may be difficult and possibly never enforced."

At present the "Foreign Corporations Act" govern the question of taking out a license to do business within the Province of Manitoba. Regarding this Act, Deputy-Provincial Secretary Jas. Hooper writes Hardware and Metal as follows: "Even now, under 'The Foreign Corporations Act,' all extra-provincial corporations should take out a license, and this they would realize should they desire to utilize local institutions such as the Land Titles Office or the courts."

Hardware and Metal, however, knows that the statement regarding the use of the courts does not hold good, as we have in mind at the present time a case where judgment was given in favor of a company doing business in Manitoba which did not have a license.

STEAMER CONNECTIONS WITH FRANCE.

The continuation of the subsidy granted by the Canadian government to the Allan Line for direct connection with France, assumes added importance in view of the new trade treaty, which has been passed by the French government and which will almost assuredly be ratified by our own at the next session. This combination will make a great difference in the present trade conditions between the two countries, making the future prospects of a large increase seem almost certain.

Trade with France has been somewhat spasmodic. At times, owing to more frequent direct steamers, it has proven very good, giving some idea of what could be accomplished in this direction if proper steps were taken to foster this trade. The establishment of a good, direct service is a long step in the right direction, and in connection with the treaty, is sure to give Franco-Canadian commerce a big boom.

The Allan line ships are scheduled by their contract to make not less than fifteen round voyages during the year at an average speed of ten knots per hour. There will be at least two round trips per month from May to November, with a smaller number during the winter months.

PERCENTAGE OF PROFIT.

The subject of expense and profit is one on which many merchants are in need of a little education, says the Hardware Trade.

A great many merchants figure their profit on the cost of their merchandise and all their expenses on the gross sales. That is to say, if their expenses are 20 per cent. and they buy an article at $1 and sell it for $1.25, they figure that they have made 25 per cent. or 5 per cent. more than the cost of doing business, when, as a matter of fact, they have practically "broken even"; their profit is exactly the same as their expense.

In speaking of the percentage of profit, a merchant can mean either one of two things : the percentage that has been added to the cost of his goods to fix the selling price, or the percentage of profit shown on his gross sales.

When one states that he adds a profit of 50 per cent. to his goods, he is understood as meaning that he buys an article for, say $1, adds a profit of 50 per cent. to it and sells it at $1.50. However, should he say that his gross sales for the year were $100,000 and his gross profit 25 per cent., this percentage of profit would apply to the selling price and not to the cost price of the goods.

The reason for thus estimating the profit based on the selling price instead of the cost price of the merchandise is that the various items of expense, when fixed in percentages, are always based on the sales, and not on the cost of the merchandise.

If a merchant in analyzing his expense account found that his salaries amounted to 7½ per cent., his advertising to 1 per cent., his rent to 1½ per cent. and his other items of general expense to 5 per cent, making his total expenses aggregate 15 per cent. of his sales, and it was his desire to show a net profit of 10 per cent. he would know that he must necessarily show an average gross profit of 25 per cent. on his sales in order to provide for this. This would mean that for every $100 worth of merchandise sold, his profit would be $25, which is 25 per cent. of the selling price of the merchandise. but 33 1-3 per cent. of its cost price.

The window that sells goods is far superior to the one that simply attracts attention.

Use pictures illustrating the goods displayed in the window. It adds human interest to many a dull subject. It is human nature to want to look at pictures. Notice how the art store window attracts more attention than any other two store displays.

PRODUCTION OF PIG IRON AND STEEL IN CANADA.

The detailed figures—not hitherto published—which we give below as to the pig iron and steel production of Canada for the half-year ending June, disclose a very gratifying state of progression. Not only was there significant increases in the totals over those for the half-year ending Dec. 31, 1908, of 96,524 tons in iron, and 84,333 tons in steel, but every individual line showed an advance. It can thus be seen that the general increase was not due to any unusual inflation of a particular line, but to an improvement in every branch —a sign of a stimulated demand from a predominating number of most important industries.

As iron and steel closely indicate the prosperity of a country, Canadians can appreciate how prosperous trading conditions must have been during the first half of the year, and what gratifying totals are promised us at the end of the year. The steel details are particularly interesting. Rails, for instance, show an increase of 34,364 tons; structural materials, etc., of 14,077 tons, and plate, axles, spikes and other sundries of 1,292 tons over the six months ending Dec., 1908. These figures indicate how railroad purchasing improved, and how the construction shops, the contractors, and other industrial corporations developed in their production.

As can be imagined, no plants have been dismantled, while, on the other hand, the different iron and steel corporations have been making extensive additions to their furnaces, mills, etc., to cope with the demand.

Ten furnaces were in blast during the half-year.

The Dominion Iron & Steel have put into construction or are projecting, 120 improved Otto Hoffman by-product coke ovens and accessory plant and equipment; an additional fifth blast furnace with stoves, etc.; two 400 to 500-ton open hearth steel furnaces; an additional, third, Bessemer converter, and a turbo-generator plant for utilization of waste steam and generation of electric energy —to replace present direct steam generation system and afford sufficient additional current to electrify the company's pumping station. There will probably be some additions to present mill equipment to take care of the increased tonnage of steel that will be produced by the enlargements previously noted.

The Atikokan Iron Co. blast furnace was blown in during the second half of the year. The Hamilton Steel & Iron Co. are building a new Gayley dry air blast equipment. It is also announced that a new bold and bar mill will be built, and that the company will do business on a much larger scale, entailing an expenditure for new worksc of over a million dollars.

The Algoma Steel Co. are erecting one new blast furnace with a capacity of 400 tons per day, and one 12 and one 18 merchant mill with a capacity of about 400 tons per day.

	Half-year ending Dec. 31 tons	Half-year ending June 30. tons.

A SHORTAGE IN STOVES.

As predicted by Hardware and Metal last summer, the demand for stoves and ranges has been so heavy this fall that there appears to be every likelihood of a shortage. The season has yet some weeks to run and manufacturers' stocks are reported to be almost cleaned out.

A canvass will be made of the various Canadian stove manufacturers during the coming week, and a report given in next week's Hardware and Metal as to the state of affairs and the opinions of the manufacturers regarding the present condition of affairs.

MUTUAL FIRE INSURANCE.

Every hardware merchant in Ontario should be interested in the effort of the Ontario Retail Hardware and Stove Dealers' Association to amend the Ontario Insurance Act making it possible for merchants to organize specialized mutual fire insurance companies just as farmers are now permitted to organize companies which only accept business from those engaged in their own special line of activity.

In the United States there are eight "hardware mutuals" accepting business only from hardware merchants, and it is possible for a hardwareman to secure insurance up to $30,000 in these eight c mpanies. Each has been in existence for from three to nine years, and each has built up a substantial surplus in addition to returning to insurers an annual rebate of from 25 to 50 per cent. of the premium paid, the rate charged being always the same as that quoted by the old line companies. As an instance of how United States retail hardwaremen appreciate the "hardware mutuals" the following letter is quoted:

E. W. Evenson, Secretary,
Spokane, Wash.

Dear Sir,—Herewith check for $416.67 covering renewal premium on policies expiring this month, which together with the RETURN PREMIUM OF $208.33 makes a total payment of $625, or the total face of the premiums.

This RETURN PREMIUM OF $208.33, together with the RETURN PREMIUM OF $93.75 on policies expired in November makes our total RETURN PREMIUM OF $302.-08 look pretty good to us, particularly as we are getting good sound indemnity. This $302.08 is a little more than $25 per month which our company is paying us.

We congratulate you, but we want also to congratulate ourselves.

MOCKLER, MILLER &
MOCKLER
Per P. E. Miller.

Nez Perce, Idaho, Aug. 20, 1909.

Canadian hardwaremen can enjoy equal benefits if they put their shoulder to the wheel. Nearly 300 Ontario hardwaremen are already organized and as soon as these progressive ones push things along to a point where they can get their insurance at from 25 to 50 per cent. less than merchants who pay old line company rates, there will be a rush into the association. There are always pioneers and those who follow after and reap the result of the pioneer work. And just so in other provinces. As soon as Ontario hardwaremen get their "hardware mutual" going the merchants in other provinces (and in other lines of trade) will get together along similar lines.

Cheaper insurance will mean more and larger policies, with a consequent reduction in the losses sustained by retailers, and shared in by jobbers and manufacturers, when fires occur. The establishment of "hardware mutuals" in Ontario and other provinces will therefore be a benefit to all branches of the trade.

Retail associations have many advantages, not the least of which is the development of a more friendly feeling amongst business competitors and the making possible of combined action in such matters as the organization of an insurance company, the collection of accounts, etc.

CANADIAN METAL MARKETS

See Itemized Market Quotations on Page 74.

MARKETS IN BRIEF.

Montreal.

Cotton Rope—21 and 21½c.

Cotton Clothes Lines—Now 95c and upwards.

Linseed Oil—Up 1c.

Toronto.

Linseed Oil—Now 73c and 76c.

MONTREAL.

November 5.—Good business is reported generally, there being the usual increased bulk moving, owing to the nearing close of navigation. No changes are announced, but the markets are in every direction showing more firmness. Spelter has not been advanced, although the price of $5.75 is the minimum, and for fair sized lots at that. Copper, reflecting the tone of the primary markets, is stronger.

The iron and steel market is very firm. Canadian furnaces are so booked up that they are not looking for business for some months to come, and it may be that Old Country iron will get a good showing. It can be laid down even in the winter below U. S. iron, and with Canadian furnaces tied up there should be a good call. The situation in the States appears to be little changed from last week. The lull in buying continues, but the pressure of old orders is enormous. The production of iron is at record figures, and some of the mills are sold up to July.

With such conditions in iron and steel it is very disappointing that copper cannot improve. It is certain that if the copper interests had taken hold of the situation in the same way that the iron and steel men did, and restricted the output, we sould have had a much stronger copper market.

PIG IRON—There is an excellent tone to the pig iron situation both for Canadian and imported iron. With the Nova Scotia and Dominion iron out of the market, the other Canadian furnaces are full up with orders and booked for months ahead. It is likely that Old Country iron will be needed to keep things going, This can be laid down below the cost of U. S. iron. Prices are firm, No. 2 foundry iron being quoted at 20s. at foundry with No. 1 30c higher. Importations of iron are being rushed in before the close of navigation, and distributed as quickly as possible. Users have ordered pretty fully, but at present rate of consumption it is doubtful whether they have covered themselves far enough. We quote Middlesboro No. 3, $19; Summerlee No. 2, $20.50; Cleveland, $19.75.

TIN—There is a stronger tone to the tin market, owing to the better tone in the primary markets, and prices are firm at 32½c. There is somewhat of a spot scarcity of tin locally, and this has also helped to strengthen the market. Buying is very good, and fair consignments are going out by boat. There has been a better tone to the English market, the statistics as to U. S. consumption helping matters. The consumption of tin in the United States during October has only once been exceeded in the history of the trade, and that was in 1903. The great activity of the tin-plate mills is mostly responsible for this. It looks as if the record established in 1906 for 12 months' trading will be beaten this year.

COPPER—The jobbing price of 14c has been unchanged, but the sagging noticed last week disappeared under the stronger tone of the New York market. Some good orders were received during the week, and there is very little stock beng held. Some heavy consignments have been dispatched by boat. Inquiries seems a little better. There are rumors of heavy buying of copper in New York, but the market shows little evidence of it. London has shown greater strength, and this has influenced New York. There is no doubt that whatever effect the increased activity in iron and steel might have had has been lost, owing to the over production going on.

SPELTER—Spelter is very firm, and although the price of $5.75 has not been advanced generally, this price is the minimum figure. Buying is good, and inquiries keep close to the market. Both London and St. Louis maintain their high figures. London showed some signs of sagging, which is somewhat singular as it looks as if the Old Country metal would have a chance of selling in the States, despite the tariff wall.

LEAD—There is no change in lead, and imported is still being quoted at $3.60 with Trail at $3.50. Buying is far, but not over brisk. The English market is fluctuating with a weakening tendency.

TORONTO.

November 5.—As the season advances there seems to be a general increase in activity among the metals, all dealers uniting in the statement that they are occupied in taking care of current business. There does not appear to be any outstanding feature. Iron and steel with their products, of course, leading the interest. Following the announcement of the enlargement of the plant at Sydney, comes this week a statement from C. S. Wilcox, president of the Hamilton Steel and Iron Co., that the company has plants for extensions to its plant, and that a bar and bolt works may be started.

In the matter of prices there is nothing new to report. All quotations are fairly firm, and copper is expected to get into line with the other metals if the proposed coming together of the producing interest is carried out.

PIG IRON—The booking of futures is on. It looks as if nothing else can be done, as it is almost impossible to obtain supplies for immediate consumption. The Canadian foundry prices are firm, and they could easily obtain more business were they in a position to produce more pigiron. Local quotations remain firm, though no advances have taken place of late. Midland and Hamilton No. 2 iron is worth $22; Clarence and Middlesboro No. 3 is at $21; No. 2 Summerlee, $23; and No. 1 Cleveland, $21.75. Demand is splendid, but stocks are low.

COPPER—Developments in the copper situation reflect a somewhat firmer tone, in that United States copper men propose to come to some agreements as to a stated price. Already a slight advance has been made in England, but the local figures remain at 14c and 14½c for lake and casting ingots. This week there is an easier market, and current business has been not at all brisk.

SPELTER—The advanced figure now ruling the price quotation in the local market has not interfered with buying, which continues steady and good. $6 is the quotation for hundred pound lots. Sheet zinc, too, is holding well at the new high price, $6.75 to $7.

SHEETS AND PLATES—The tendency of the market is pretty firm and a good general demand exists. Buying for present needs is strong, but there is some reluctance among jobbers to accept business far into next year at this year's quotations. Tinplate is being taken up by a miscellaneous consuming trade, and sheets are being bought freely in country sections.

LEAD—The features which have characterized the market of late have continued unchanged. Buying is being done in limited quantities for immediate or near delivery at $3.65 for imported and $3.55 for Trail lead. Stocks are moderately large.

TIN—Moderate sales are taking place. Tin is better than lead, though orders are not above the satisfactory plane. The quotation remains at $32½c.

OLD MATERIALS—The iron mills in Ontario and across the border are doing well in the buying of old iron and steel. They complain somewhat of high figures they are compelled to pay, but dealers assert they, too, have to allow a larger price for the scrap gathered or bought from the small old metal man. Those who have metals to sell in large quantities are obtaining good prices. Dealers are offering to pay for heavy copper wire, 11¼c; copper bottoms, 10½c; heavy red brass, 10¼c; heavy yellow brass, 8¾c; light brass, 6½c; tea lead, 2½c; heavy lead, 3c; scrap zinc, 3¾c; No. 1 wrought iron, $11; machinery cast scrap, No. 1, $15 to $16; stove plate, $13; malleable and steel, $8; old rubber, 9c.

HARDWARE MARKETS

MONTREAL.

November 5.—As we anticipated last week, cotton rope and cotton clothes-lines have advanced. Rope is now quoted at 21c to 21½c, while cotton clothes-lines are, 30 feet, 95c; 40 feet, $1.15; 48 feet, $1.40; 60 feet, $1.75; 72 feet, $2.15; 100 feet, $3. Sash cords look to be in for another advance, and in some instances they have been marked up another ½c, although this is not general. The market in all lines is very firm, and more advances are expected. The boom in raw rubber is expected to affect rubber goods.

The rush to get off goods before the close of navigation continues, and the shipping departments, while not working overtime, are still very busy. Little booqing is noticed, and orders are of a general sorting-up description. Lumbermen's supplies are going very well, and there is naturally an active call for cutlery and silverware, weather strip, horse blankets, snow shovels and sleigh bells are showing up prominently in shipping. All the way round the tone of the market is good.

BUILDERS' HARDWARE — Sash cords are firm on their last week's advance, and in some instances are being quoted ½c. higher, but this is not general. Good assorted orders are coming in, especially for lock sets, belts, butts and escutcheons. The Northwest is buying in very good strength. We quote: Lock sets (inside) $4 per doz. and up; lock sets (outside) $13.20 and up; common rim locks, $1.10 per doz.; porcelain knobs, $1.10 per doz.; sash cords, 32½c to 33c.

WINTER LINES—Active shipping by way of water navigation is being made in general lines. Heavy hardware shows improvement, but shelf goods are the better movers. Weather strip, horse blankets, stable fixtures sleigh bells, lanterns, carpet sweepers, wringers, washers, bread makers and other household utilities are in good demand. The market is firm all the way round.

CUTLERY, SILVER AND PLATED WARE—Very good trade is now being done in carvers in cases, table cutlery, table spoons, pickle frames, pocket knives razors, safety razors and shaving sets. There is an activity in this department that augurs well for the holiday trade.

SPORTING GOODS—Sorting-up orders in guns and ammunition are coming in, but the demand shows a falling off. Skates and hockey sticks have quickened up, however. Air guns are showing a strong movement, and so are gymnastic lines, such as Indian clubs, dumbbells and fencing outfits.

MINERS' SUPPLIES—The demand is not so good, although steady orders are coming in for picks, powder, and hammers. Supplies for railway work are moving in about the same strength. We quote: Miners' picks, 16½c a pound; prospectors' hammers, 16½c; pick handles, $1.85 a dozen; drilling hammers, 6c a pound; crowbars, 3½c; drill steel, 8c.

BOLTS AND NUTS—No change is announced in prices, although the market is exceedingly firm. The demand is good, and stocks generally are not heavy. We quote: Discounts on carriage bolts, ⅜ and smaller, 70; machine bolts, ⅜ and smaller, 70; machine bolts, ⅜ and less, 60, 10 and 10; coach screws, 75; stove bolts, 80 and 7½.

NAILS—The strong movement in nails continues, and the market is very firm at the following prices: Wire nails, $2.25; cut nails, $2.40.

SCREWS—No change in screws is reported. The demand is steady, and we quote: 85 and 10 off for flat and round head bright; 75 and 10 off for flat head brass, and 70 and 10 for round head brass.

LUMBERMEN'S SUPPLIES—A very good call has developed for lumbermen's supplies. No change is announced in price, and we quote: Cant hooks, $12 a dozen and up; axes, $6.50 a dozen and up; axe handles, $1.15 and up; cross-cut saws (inferior) 25c per foot and up; better grades, 43c per foot and up; axe wedges, 25c a doz. and up.

SHOVELS—A steady demand is apparent. Snow shovels are the most prominent movers. No change in prices is announced, and we quote: First and second grade of spades. 60 and 2½; 3rd and 4th, 50 and 2½; scoops, 1st and 2nd grades, 50 and 5; 3rd and 4th, 45 and 5.

WIRE—Orders are somewhat quiet, and the market is without change. We quote: Barb wire, car lots, mixed, $2.50; small lots, $2.55; plain twist, car lots, $2.80; small, $2.85. Galvanized wire, No. 9, $2.25 in straight and mixed car lots, and $2.30 small lots, f.o.b., Montreal. Coiled spring fencing, $2.30; straight and mixed car lots, and $2.35 small lots. Plain wire, bright, annealed and annealed and oiled, $2.35 base. Staples, bright, $2.60; gall., $2.85.

TORONTO.

November 5.—The opening of November has brought about stimulating orders for fall and winter lines, and an increasing pressure for builders' hardware for immediate use. Stoves and furnaces are at the rush period, and already booking is being done for next year's wire cloth, screen, and garden hose. The price of this latter is firm, and there is at present a tendency to go higher. Rubber has been on the up grade, though just now there is an easing off; and cotton and shoddy, which enter into the making of hose to the extent of about 75 per cent., have recently made advances.

The general tone of the hardware market is cheerful, and further expansion is looked for. Christmas goods selling is light as yet, though some splendid sales of holiday cutlery sets have been made. In fact, a number of travelers are pushing this particular line this fall. Sporting goods have become somewhat dormant again.

BUILDERS' HARDWARE—This line continues to be a most important one, and the sales made are of fair volume, hardly so large or numerous as earlier in the season, but called for immediate consumption. Building and roofing papers are still going out in good quantities, and to all districts of the province. Carpenters' and mechanics' tools are also good sellers.

SEASONABLE LINES—Late fall and early winter goods have the best call. There is an immense variety of goods termed seasonable, and almost every order makes a demand for a great many lines. Gloves, mitts, stable lanterns, blankets, cow ties, pitch forks, and barn and stable fittings generally are the goods moving just now, together with saddlery and carriage hardware. Snow shovels continue brisk, and coal scoops and in fact, all shovel lines are demanded steadily. Wire cloth screens and garden hose for next spring's selling are being booked.

HEATING AND LIGHTING GOODS —Ranges and furnaces are doing record business, and orders are coming faster than they can be filled. Manufacturers state that all heating orders are accepted for future delivery only. Lamps of fancy designs and patterns are beginning to be active.

HOUSEHOLD GOODS — The usual kitchen lines of tinware, enamelware and galvanized ware have sold well all fall, as also did some crockery lines. House-cleaning lines, too, have been active. Just now there is a slackening in demand, though trading in these goods is satisfactory.

CUTLERY AND SILVERWARE—Especially in cutlery is there good business being done. Some travelers are pushing this line at present. Most of the goods shown are holiday lines, and these have sold well. General lines for every season have stimulated inquiry. Christmas goods are being shown in cut glass, brass, silver and plated ware. Orders, though are yet light.

SPORTING GOODS — The passing week is another easy one, sporting goods being rather quiet. Some cartridges have been sold, but the season for sales is practically over. It was a remarkably good one, however. Hockey sticks are being shipped on early orders, and this is the particular feature of sporting lines at present.

HEAVY GOODS—Like the basic metals, all manufactured iron and steel goods are heavy sellers—rods, pipe and bars, especially structural beams of certain medium sizes are active, too. Wire nails, of course, are the most wanted line, and inquiry for wire and screws is splendid.

U. S. IRON TRADE.

Cleveland, Ohio, Nov. 4.—The Iron Trade Review says: "From the standpoint of orders for finished material in general actually entered upon mill books for future rolling, the month of October reached a high mark for the revived iron and steel market, and in this respect fixed a new record for the future industry to draw its comparisons against. The Carnegie Steel Co. during the month booked for definite rolling the largest aggregate of tonnage of finished products, namely, plates, structural shapes, bars, bar mill products, axles and wheels of any similar period of its entire history. Rails and semi-finished material are not included in this total. The orders represented were both specifications against running contracts and new business, accompanied by positive instructions for manufacturing. Some departments of the company entered fully twice as much tonnage as they shipped. Similar reports are made by leading independent steel makers."

Catalogues and Booklets

Manufacturers or jobbers sending printed matter for review, should draw attention to the new lines listed; and retailers sending for catalogues or other matter, should write on their regular printed letterhead and mention this paper to make clear that they are in the trade.

Marlin Firearms.—A comprehensive catalogue of some 140 pages, bearing date October, 1909, is being circulated by The Marlin Firearms Co., New Haven, Conn., describing their repeating rifles, shotguns, carbines and muskets. The catalogue is divided into three sections—(1) designed for quick reference of dealers who desire brief details of the arms; (2) complete information for consumer and novice; (3) interesting hints for shooters in general. Ammunition, reloading tools, sights, etc., have special chapters in the book, and such articles as rust repeller, engraving, inspection, etc., are dealt with illuminatingly. A telegraph code for ordering is enclosed, and the whole work is abundantly illustrated.

"Opalux" Glassware.—The Canadian General Electric Co., Toronto, have recently issued a small folder descriptive of "Opalux" glassware for electric fixtures for which it is claimed the volume of illumination is increased and the cost of cleaning and loss from breakage is greatly lessened. The reflectors are of an opal color, are made on scientific prinicples, possess great reflecting powers and send a soft light downward. They are made in several styles and sizes.

Colt's Revolvers.—Retailers will be interested in the new catalogue of revolvers and automatic pistols just issued by the Colt's Patent Fire Arms Mfg. Co., Hartford Conn. Besides describing and illustrating their full line of arms, the new booklet gives concise directions for practice, classes of arms, sizes of targets and other information of value, including a photographic reproduction of the various cartridges adopted to the various revolvers and pistols described.

HARDWARE TRADE GOSSIP

Ontario.

The Hudson Hardware Co., Belleville, has been sold to W. H. Stafford, Gananoque.

Milton Rossiter, 1054 Queen street east, Toronto, has moved into larger premises at 1024 Queen street east.

A. & H. Wideman, Markham, hope to be in their new hardware store building before the rush of the holiday trade.

Geo. T. Pepall, sales manager of M. & S. Samuel, Benjamin & Co., Toronto, is laid up this week with a severe cold.

Mrs. Hegert, wife of H. S. Hegert, of the Vokes Hardware Company, Toronto, died last week after being ill a long time.

The Mills Hardware Co., Hamilton, which is opening a branch on Barton Street east, will also do business at the John street store.

Thomas Watson, manager of the Toronto Bolt and Forging Works, Swansea, has resigned and severed his connection with the company.

Sam Pearsall, the Yonge street, Toronto, hardwareman, left last week with other sportsmen on a moose-hunting expedition in New Ontario.

Jack Hodgson, of the Aikenhead Hardware Co.. Toronto, was presented with a case of cutlery by that company on the occasion of his recent marriage.

John McGowan, of McGowan Bros., Uxbridge, is visiting at St. Paul, Minn., for the benefit of his health, he having been suffering from rheumatism of late.

Mr. Hickey, manager of the Supreme Heating Co., Welland, has recovered from an attack of typhoid which kept him away from the office for six weeks.

Henry Jones, for many years a hardware merchant at Uxbridge, died on October 31 after a lingering illness. A limited stock company will take over the business.

Charles Messecar, manager of the Brantford Cordage Co., has returned home after a business trip to the west. He says everything is very bright and business is booming.

Louis C. Connors, until a short while ago a traveler for the Toronto Plate Glass Co., and lately a clerk in a Toronto hardware store, died suddenly of heart failure on November 2.

Sol Burrows, who was for a number of years engaged in the stove and tinware business at Port Colborne, died at Galt where he underwent an operation from which he did not recover.

The United States Sherardizing Co., New Castle, Pa., controlling the sherardizing patents for the United States and Canada, recently licensed The General Electric Co., Toronto, to sherardize their products on a royalty basis.

Fred Licence, Canadian representative of P. Goldsmiths & Sons, Boston, died at Toronto last month, after a short illness. He was only 28 years of age, and was formerly connected with the sporting goods departments of Charles Stark & Co., and Rice Lewis & Son, Toronto, before going in the road for the Boston sporting goods jobbers.

Quebec.

The assets of M. Burel, tinsmith, Beloeil, have been sold.

Cousineau & Constant, hardwaremen, Montreal, have dissolved.

C. C. Starr, of John Starr, Son & Co., Halifax, has been staying in Montreal.

A. J. Thibodeau, St. Paulin, Que., has been a caller on the Montreal hardware trade.

H. K. S. Hemming, of the Auto-Strop Safety Razor Co., Montreal, has returned from a trip to New York.

G. Parent, Pointe Claire; L. Provost, L'Epiphanie, and C. O. Gervais, St. John's, have been visiting the trade in Montreal.

Canadian Car and Foundry Co., Montreal, the recent car manufacturing merger, has been granted Dominion incorporation. The capital is $12,500,000.

H. Marchessault, St. Ours, Que.; J. Julien, Pont Rouge, Que., and A. Desjardins, St. Joseph Du Lac, Que., have been on a business trip to Montreal.

A. E. Peters, vice-president of the Record Foundry Co., Montreal and Moncton, has returned to Moncton, after a lengthy stay at the Montreal office and works.

Watson, Jack & Co., Montreal, have given up the selling agency in Quebec for the Robb Engineering Co., and have made arrangements to represent in Quebec the Polson Iron Works.

Lee G. Smith has resigned as superintendent of the Bucyrus Steel Casting Co., Bucyrus, O., to accept a similar position with the Londonderry Steel Foundry, Londonderry, Nova Scotia.

To keep pace with the increasing business of the Canada Paint Co., Montreal, extensive alterations are being made at the works. There will be a new main entrance to the office department and the accommodation for the staff will be greatly increased. The improvements are being effected under the supervision of the firm's engineering and mechanical staff.

A. Paxton, who has been attending to Montreal City, in the interests of the Dominion Wire Manufacturing Co., Montreal, is taking charge of Ontario east and the Ottawa valley, and is making a specialty of the "Dominion Special" field fence. T. Blaikie, who formerly looked after the Montreal territory has again taken hold of the ground.

The Brodie's Manufacturing Co., Montreal, metal polishes, etc., have amalgamated with the Allredie Pure Food Co., of Bridgewater, N.S. The new corporation will be known under the latter name. A. W. Hugman, general-manager of Brodie's will continue with the new company in a prominent capacity. The business will be carried on entirely in Montreal.

Trade Gossip from Canada's Eastern Provinces

Market Conditions at Halifax—Change in Hardware Business at New Glasgow—Montreal Hardwaremen to Play Hockey.

HALIFAX.

November 1.—Jobbers report the hardware business fairly good in all lines at the present. Prices are very firm and advances in several lines are noted. Cotton goods continue to go higher. Cotton seine twine (15 to 27) is selling at 26 cents per pound lots, with the usual extra charges for smaller lots. Tarred cotton lines are quoted at 20 cents per pound in large lots. Cut nails and wire nails have also advanced and notwithstanding this fact, the manufacturers will not accept orders later than December 31, at the present new prices. The indications are that nails will take another jump soon after the New Year. Plain wire fencing, soil wire and fencing wire staples have also advanced. Wire nails are now quoted at $2.45 per keg base, and cut at $2.60 per keg base. Ingot tin is selling at 34 to 35, and turpentine at 85 cents in cask lots. All metals are very firm, and some slight advances have been made in the list.

There was a fairly good demand for ammunition this season, but the sale of guns and small arms was not quite as large as last season.

C. T. Bent, of New Glasgow has taken over the hardware business conducted in that town by Bent & Cahoon. Mr. Bent was first in business in Port Elgin, in 1871. In 1881, he went west, but soon returned, as the climate did not agree with him, and went into business with Chambers & Co., of Truro, where he remained for two years. In April, 1883, he went to New Glasgow, as manager of the Chambers & Co.'s branch store. In 1885, Mr. Bent and Mr. Cahoon formed a partnership, which has just been dissolved, the former continuing the business.

The season for building operations continues very favorable in Halifax, and there is a large amount of work going on at the present time. Farquhar Bros. have just been awarded the contract for the heating of the new Chebucto Road school building.

J. H.

MONTREAL.

November 3.—The Montreal Wholesale Hardware Hockey League will again be flourishing this season. The league will be strengthened by the inclusion of the Thomas Robertson Co., and will consist of teams altogether. The following have been elected officers of the league, Hon. Presidents, George Caverhill, (Caverhall, Learmont & Co.); J. G. Lewis (Lewis Bros.); G. C. Davis, (Frothingham & Workman); H. S. Fuller, (Canadian Fairbanks); J. R. Wilson, (Thomas Robertson); President, H. B. Seybell, (Starke-Seybold); 1st Vice-president, G. E. Chaffee, (Lewis Bros.); 2nd Vice-president, G. Drinkwater, (Canadian Fairbanks); Secretaries, E. C. Dingman and E. Roberts, (Caverhill, Learmont & Co.); Treasurer, P. Bolan, (Frothingham & Workman); Executive Committee; H. Massey, (Caverhill, Learmont & Co.); E. Montgomery, (Starke-Seybold); W. L. Watson, (Canadian Fairbanks); H. G. Yorke, (Frothingham & Workman); C. J. Walker, (Lewis Bros.). Judging from the enthusiasm displayed there will be a keen struggle for the cup.

Interesting Trade Items Gathered in Ontario

New Store at Leamington—Central Heating System at St. Thomas—Lighting Stores at Night at Kingston—Method Discovered of Using Scrap Mica—Lead Mines Near Kingston to be Worked—Three Manufacturing Concerns Establish Branches at Bridgeburg.

KINGSTON.

November 2.—The campaign, opened here, a few weeks ago, to have the store windows lighted at night, has not been allowed to drop, but it is being pushed for all it is worth. "I believe that our Christmas trade will be benefited by the practice," said a hardware man, who was one of the first to "light up." It is stated for a positive fact, that the traffic on Princess street, the main thorofare since the store windows have began to be well lighted, has been much larger, and better in quality than ever before.

The steambarge Kinirving, of Kingston, has been engaged to take sixty tons of scrap mica, from Perth, to Cape Vincent, N.Y. It is owned by Wm. Watts, John Adams and John Noble. This is the accumulation of years, but up till the present, there has not been a demand for the scrap. It appears that for a long time experts have been at work trying to devise a treatment for grinding up the refuse mica, and then to make thin sheets from the powdered article. Such a treatment is now considered perfected, and the finished article may be used for stoves, so that there is bound to be a large demand for scrap mica, from this time forward.

An interesting piece of news has just been given out, in that the Frontenac Lead Mining Company has blossomed out into favorable prospects. The cash required before beginning operation. $40,000 has been subscribed. It was contemplated to commence operations at once at the mines on the Perth road, but negotiations have been opened by New York state men for the purchase of the whole interest. Two United States experts have declared that it is one of the finest deposits for lead on the continent, and that in the dump alone, there is material enough for smelting to more than repay for the paid up stock. Building are on the ground and the pumping out of the shafts will be the chief expense before operations.

The resumption of mining may mean a smelter in Kingston, a new industry, if the city council and citizens will encourage it, but unless encouragement is given in the way of municipal site and exemption, it is within reason that the smelter will be put up at the mines.

E. G. B.

LEAMINGTON.

October 30.—Harry Lendon's new hardware store was opened for business to-day. These new premises in the Wagner Block have been entirely remodeled since their purchase by Mr. Lendon. The main building is 80x30 with a warehouse at the rear 60x24. The office is situated at the rear on the west side and a stairway leads to the second storey from the opposite corner. The second floor will be used as a tinshop and store room, and the plumbing, gas fitting and hot water department will be located here. The whole of the centre of the first floor is used for stoves and heavy hardware. Paints, oils, varnishes, glass, etc., occupy the shelves on the right side, while those on the left are fitted with new patent Bennett boxes of galvanized steel. Three large counters with open shelves extend along the left side, enabling customers to see nails, hinges and other articles and make their selections with less trouble. The store has a handsome plate glass front. Guns, revolvers, etc., are shown in glass cases on the walls, while small wares are shown in counter cases.

The Wheatley hardware firm of Dobbyn Bros. has dissolved partnership.

V. L.

ST. THOMAS.

November 2.—The building trade is keeping up for a record. Owing to the open weather all workers can keep busy. The farm trade is also making a good showing and merchants have little to complain of.

Ingram & Davey are showing a good sporting goods window, having a number of stuffed animals and birds among the goods displayed. The window attracts a lot of attention.

The building permits up to the end

of October amounted to $222,800 which is well in advance of a year ago.

Hamilton & Stott have completed the installation of the municipal central heating system, heat was turned on at the Engineer Hall and with one pound of pressure, made the building uncomfortable. This heating proposition will pay municipalities to look into.

Enoch Dixon, plumber, followed the general trend of the trade here and was married last week.

S. A. Pottieary, plumber, who was burnt out lately is again doing business in the old stand.

G. F.

BRANTFORD.

November 2.—A representative of the John Diere Mfg. Co., Illinois, manufacturers of agricultural implements and engines, was in the city last week, looking for a site for the establishment of a Canadian branch of the firm.

The Hamilton Bridge Campany was awarded the contract for the erection of a new steel bridge at Kelvin.

Tenders will, in all probability be asked for early next spring, for the erection of a new steel bridge on Market street, over the canal. The present bridge is in a very dangerous condition.

In a special article on prominent men of Waterford, the Brantford Expositor says: "Prominent in the commercial life of Waterford is Col. I. E. York, who has been in business in the village for some thirty years. For years he conducted a drug and stationery business, and ten years ago hardware was added. Mr. York took a commission as 2d lieutenant in the 39th regiment in 1882, was promoted to be captain in 1887, major in 1891 and lieutenant-colonel in 1898. He commanded the regiment for five years and then in 1903, according to the usual custom, was transferred to the reserve of officers. Mr. York is secretary-treasurer of the high school board, and is keenly interested in all efforts to better the Village of Waterford."

ALLISTON.

November 2.—W. B. Clifton, who for twenty-five years prior to last October, conducted a hardware business in Alliston, has purchased a store on Victoria Street East, Alliston, which he is renovating and enlarging by adding another storey. He expects to be in his new premises in a month, and will carry a stock of about $2,000. He will also carry on his present plumbing, tinsmithing and heating business. His store will be fitted up with the latest improvements —silent salesmen and modern equipment.

M. O.

BRIDGEBURG.

November 2.—Tuttle & Bailey, warm air register manufacturers, New York, have established a branch factory here, and Pratt & Lambert, paint manufacturers, have also opened a Canadian works on this side of the Niagara river. This makes three newhardware concerns which have established plants here recently, the Hart & Cooley, New Brittain, Conn., also manufacturers of warm air registers, having located here a few months ago.

News From the Prairie and British Columbia

Several Big Industries Locating at Vancouver — Pilfering of Goods on Their Way to the Coast—Many New Buildings at Calgary—River Navigation From Edmonton to Winnipeg—Stove Warehouse Burned at Winnipeg.

VANCOUVER.

October 30.—This is the steel age, and with the development on the coast, those having to do with this commodity are getting busy. The Western Steel Corporation, recently incorporated with a capitalization of $20,000,000, has opened offices in this city. In this company are interested a number of large and successful business men on the coast, and the scheme is to have a manufacturing site somewhere in British Columbia, and the announcement is made that they are the buyers of Fraser river waterfront, valued at $300,000.

Then, Douglas Brothers, of Winnipeg, sheet metal workers, have purchased a location in Vancouver, in a section that is already marked by the establishments of the Vancouver Engineering Works and the structural iron works of J. F. Coughlan & Co. John Douglas, who is in the city, states that his concern has been doing business in Winnipeg since 1872, and he decided to come to the coast after inspecting conditions. An expenditure of $100,000 is contemplated, with employment of 100 hands at the outset.

An endeavor is also being made to interest the Belfast shipping firm of Harland & Wolff in the recently established shipyard at North Vancouver, of McDougall, Jenkins, Limited, since the Old Country firm has announced its intention of starting in Canada.

Edward Gurney, manager of the Gurney Foundry Company, accompanied by his son, E. H. Gurney, is also on the coast looking for a site for a branch factory.

Representatives of the Ross Sleeping Car Company have also interviewed the mayor respecting the establishment of a branch here.

R. B. B.

VICTORIA.

October, 28.—Plans for the new G. T. P. wharves in Victoria have been filed with the registrar of titles. Large warehouses will be erected on the wharves. Work is to commence at once and will be finished in the spring. The cost will exceed $100,000.

The new Bank of Vancouver will open an office in Victoria.

E. F. Geiger, plumber, Douglas street, was thrown from his buggy and had his arm broken.

T. E. Raster, representing a number of American hardware manufacturers controlled by A. W. Pike & Co., San Francisco, was in town this week.

Trade during the present month, while not quite up to standard of the past few months, is keeping up very well. The outlook for the holiday trade is very good.

There has been considerable pilfering of cases of goods on the way to the coast. This week a case from Lewis Bros., Montreal, consigned to a Victoria hardware dealer, was broken open and a considerable amount of articles taken out, mostly cutlery. The box looked easy, not being bound or wired in any way.

W. B. C.

CALGARY.

November 1.—The Diamond Coal Co., of which Thos. Underwood, of Calgary, is manager, has built a private railroad line from Lethbridge to their mines.

The Calgary warehouse of the Cockshutt Plow Company will be enlarged.

The Y. M. C. A. are raising $50,000 in order to provide the necessary funds for the addition of two storeys to their building.

The contract for the purchase of weather proof common wire for the balance of this year's electric light work has been let to the General Electric Co. at $17.20 a hundred.

The Calgary Wine and Spirit Company has secured a permit for a warehouse to cost $21,000. Excavation has begun on Seventh Avenue West for the erection of two large wholesale warehouses by the Bole Drug Company and the McLaughlin Company.

D. J. Young is erecting an $8,000 residence on Mount Royal; Supt. McCauly, of the street railway, a $4,500 residence, and I. G. Ruttle, a $3,500 residence.

The sun shining through the window of J. H. Ashdown Company last Sunday afternoon certainly gave a pleasing effect to their fine display of cut glass. With Thanksgiving behind them, dealers are looking forward to and making preparations for the Christmas trade.

M. G.

PRINCE ALBERT.

November 2.—That which may prove to be an important factor in the commercial life of Western Canada was discussed a few days ago by the Board of Trade in Prince Albert. The board re-

WANTED—Position as hardware salesman; wide experience in shelf and heavy hardware. Best of references. Would start work at once. Box 910, HARDWARE AND METAL, Toronto. (47)

SITUATIONS VACANT

WANTED—Salesman with well established trade to sell an old and well established line of refrigerators on commission basis. Give full details as to lines carried, references, etc. Box 912, HARDWARE AND METAL, Toronto. (50)

solved to urge upon the Dominion Government the task of opening up navigation on the Saskatchewan river, between Edmonton and Winnipeg. The fact that such an undertaking is feasible was made known fully thirty years ago, when Colonel Ruttan, Winnipeg city engineer, made an investigation for that purpose. The need of the work at that time, however, did not warrant the immediate opening of the route and since that time it has almost been forgotten. Upon inquiry, however, it is found that the greatest work in that connection is the construction of a canal about twelve miles long, at the head of Lake Manitoba. The combined efforts of the Boards of Trade in the west is sought for to interest the Government in the project at once. It is known that the freight rate on coal from Edmonton to Winnipeg is at present four dollars per ton, while it is estimated that it could be brought down by steamer for at least $1.50 per ton, and at a profit. Should the route be opened the trade between Winnipeg and Edmonton would be greatly increased in many lines.

L. C. H.

WINNIPEG.

November 3.—The Retail Hardware Merchants' Association met on the evening of November 1, and discussed several important measures. President Charles Mulvey presided.

The James Stewart Manufacturing Co., Woodstock, were unfortunate enough to lose their warehouse and entire stock in Winnipeg by fire on Saturday, Oct. 30, but fortunately their insurance will fully cover the loss. Cars which they had on the way at the time of the fire have since arrived, and further ones are now on the way. Temporary quarters have been secured, and they are conducting business as usual.

F. O. Joy, for some years manager of the sporting goods department in the Miller-Morse wholesale hardware house, has severed his connection with that firm to take a similar position with the Marshall-Wells house in Portland, Oregon.

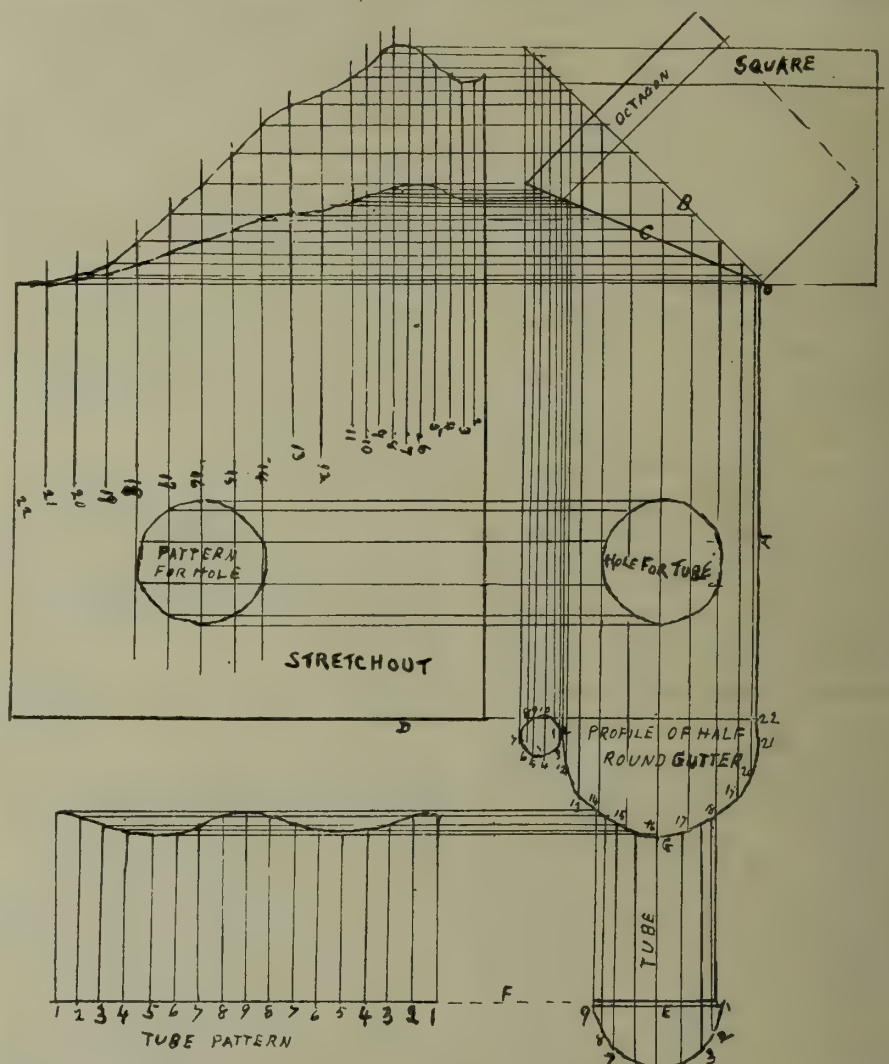
C. W. Playfair, chief auditor for the Miller-Morse hardware company, was married on October 25, to Miss M. Playfair, of this city. Mr. Playfair was presented with a handsome clock by his fellow employees.

Dunn Bros., of this city, have been awarded the contract of equipping the new twelve-storey McArthur building with fireproof metal doors and windows. This is the largest contract of this kind ever let in this city.

Workmen are busy at present constructing a large display window in the Ashdown retail hardware store on Bannatyne Avenue. Mr. Ashdown believes in window displays and lots of light. In the spring he contemplates further alterations in this connection.

Berry Bros., varnish and paint manufacturers, Walkerville, Ont., contemplate erecting a branch factory in this city in the near future.

L. C. H.



Cutting Patterns in the Tin Shop

HALF ROUND GUTTER.

To draw a pattern for square and angle mitre for a half-round gutter, draw the profile of gutter the required size and shape on the line D and divide it into any number of equal spaces. Erect the line A and at any convenient point, viz, O, strike mitre lines B and C. Draw lines from points in the profile parallel with the line A and intersecting the mitre lines C and B. Now measure the distance of these spaces and set them off on stretchout line D and draw lines indefinitely from points in stretchout at right angles with line D. Place your square at O and at right angles with line A. Draw lines from intersecting points in mitre line to the corresponding number in stretchout. Now draw lines through intersecting lines in stretchout and this will be the correct pattern.

To draw pattern for a tube, draw tube the required size and erect centre line E G and at E strike a half circle and divide it into any number of equal parts. Draw lines from these points parallel with line E G, intersecting profile of gutter. Draw line F and space off the stretchout 1-9-1, and draw lines indefinitely from points at right angles to line F. Place your square parallel with line F. Draw lines from G to corresponding numbers in stretchout. This gives required pattern. Edges to be allowed.

HARDWARE PATENTS.

The following is a list of patents issued by the Canadian Patent Office on Oct. 12, relating to hardware and metal, and furnished by Fetherstonhaugh & Co., 5 Elgin Street, Ottawa.

121109—O. Blakeley, Seattle, Wash., combination tools.

121140—W. H. Hammon, Pittsburg, Pa.; pipe couplers.

121151—A. G. Kjellerstedt, Torrington, Conn.; tongs.

121172—C. E. Ragsdale, Trafalgar, Ind.; quick acting wrenches.

121213—R. Cook, Berlin, Ont.; ball bearings.

121253—J. T. Hamill, Guelph; carriage springs.

Marshall-Wells Co., Winnipeg, has been granted a Dominion charter.

IT LOOKS SMALL

but there are a hundred little services a "want ad." in Hardware and Metal can perform for you cheaper, quicker, more thoroughly and more satisfactory than can be done in any other way.

It can get a customer for you for any show cases, counters, or any other fixtures you are anxious to dispose of; it can secure for you a set of tinsmith's tools, a typewriter, a silent salesman or any other article which you are anxious to buy cheaply.

The wider your market the better the bargain you will be able to make.

Our "want ad." page will put you in touch with practically every Hardware Merchant in Canada, and out of our thousands of readers it seems reasonable to suppose that there will be some man who is looking for just such an opportunity as you have to offer.

A few Reasons Why You Should Handle PEASE ECONOMY ROUND HOT WATER BOILERS

They are built especially for basements with low ceilings ---which gives them a wider demand.

They have Iron to Iron connections.

They have a large Centre Water Column.

They are set without rubber packing or washers.

They have large, powerful Direct Fire Surfaces.

They embody every modern improvement in boiler construction which is of real value either in adding to heating efficiency or reducing fuel consumption. As a result

ECONOMY BOILERS ARE EASY TO OPERATE AND ARE VERY ECONOMICAL.

If you are a practical dealer, a perusal of our Booklet will convince you. Send for a copy to-day.

Western Canada Hardware Market Situation

Our Western Correspondent Reviews the Market Outlook — Hardware Quotations Corrected by Telegraph From Hardware and Metal's Winnipeg Office up to Noon on Friday.

Winnipeg, Nov. 4.—Orders for out-of-town shipments are not heavy just now and the trade is largely of a sorting nature. The continued beautiful weather has meant a boom to the building activity in every part of the west. The trade is good for door and window fixtures. Glass and putty are going out in large quantities and will continue to do so for some time. The demand for finishing paints and varnishes is good, but it will soon begin to weaken.

There is a good demand for miners' and lumbermen's goods just now. Picks and crowbars are being ordered, as well as drill steel. Cross-cut saws are in good demand for the B. C. trade, as well as in some sections of Manitoba.

The Christmas trade promises to be excellent. The more remarkable demand for these lines is in cutlery and plated ware. Sporting goods, chiefly skates and hockey sticks, continue to go out freely. Locally, the heating goods lines are greatly in demand. Tin and galvanized sheets are being used very extensively in hot air furnace work. Hall stoves are a good feature of the trade this year in rural sections.

Collections are fair and wholesalers are expecting larger returns to be made soon.

Winnipeg Quotations.

WIRE—Barbed wire, 100 lbs., $3.15; plain twist, $3.40; staples, $2.90; annealed wire $2.85 base; oiled, 10c extra; bright iron, $3.15 base; brass spring wire, 29c base, plain galvanized wire, 6, 7 and 8, $3.50; No. 9, $3.10; No. 10, $3.60; No. 11, $3.70; No. 12 $3.30; No. 13, $3.40; No. 14, $4.25; No. 15, $4.75; No. 16, $5.

Quality a Sure Foundation on Which to Build Your Business

ARE you interested in making your paint and varnish business pay better? There is no surer way to build up a business than by stocking a line of goods that has *quality* back of it. It means that you are following the straight road to success, because then you are neither deceiving yourself nor your customers. Quality in Sherwin-Williams Products will gain the confidence of the public and hold trade for the dealer who stocks S-W. goods. Read what The Little Paint Man has to say on the subject.

The quality in S.W.P. not only keeps old customers, but it brings in new ones.

The profit from selling high quality goods is not all in the money you make. Part of it is in the reputation you build up.

A business that is going to last cannot be built up on a compromise between good and poor quality.

Why take chances by selling an unknown paint? S.W.P. is an established product.

"Cheap" by the gallon means "dear" by the job.

This will be a good year for good business for those who sell good paint.

If you are interested in a Quality Proposition, write to

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal waterworks and sewerage systems, railway or mining news, etc.

Industrial Activity.

Two new elevators will be erected at Port Arthur next year.

The Quebec Harbor Commissioners will rebuild their freight sheds.

A new lumber mill will be erected at Nahima, on the Alberni Canal, B.C.

The Wetaskiwin Mattress Co. is to have a warehouse erected at Camrose, Alta.

A Chicago company wants to erect a grist mill and brewery at Wainwright, Alta.

The Prince Albert Laundry Co. will build a new laundry building at that place.

Four of the six grain elevators building at Fort William are practically completed.

The Wetaskiwin Produce Co. will erect a creamery and cold storage building at that town.

The Paymaster mine at Gold Rock, near Keewatin, Ont., are erecting a stamp mill.

Harvey Motors, Ltd., intend erecting a marine and stationary engine plant at Dundas, Ont.

Messrs. Battle will shortly erect a building at Thorold for the manufacture of concrete blocks.

The Oliver Mfg. Co. secured the contract to build a new warehouse for Bentley Co., at Lethbridge.

V. Williamson has the contract for building an addition to the O. & W. Thum Co.'s fly paper factory at Walkerville.

The contract has been let to Wm. Kribs for the extension to the premises of the Hespeler Machinery Co., at Hespeler.

S. Homan has been awarded the contract for the addition to the branch of the International Acheson Graphite Co.'s works, Niagara Falls.

Barber & Johnston have been granted a permit to erect a pork packing plant at Guelph, and building operations will be commenced at once.

The McClary Manufacturing Company, London, will within a short time, commence work on a new warehouse in the southeast end of that city.

The Continental Oil Co. have commenced the foundations of a warehouse at Regina. Stakes have also been set for a warehouse for the Canadian Oil Co.

The Sumner Iron Works Co., of Everett, Wash., is having plans prepared for works, to be in operation within six months, and to cost $300,000, at Vancouver.

The Allan Hills Edge Tool Co. have opened up operations at the old axe works in Galt, which had been closed for a year. In a short time 100 men will be employed.

Construction of the new drydock and shipbuilding plant is being rushed. Five hundred feet of cofferdam are now completed and the work of putting it in place has begun.

The British Columbia Electric railway has let the contract for the erection of its new car-barns and repair shops at New Westminster to W. W. Forrester. Work will be commenced immediately.

The recent business interests combination of the Frost & Wood Works, Smith's Falls, and the Cockshutt Plow Co., Brantford, has resulted in the addition of 75 men to the pay roll of these two concerns.

A company capitalized at $250,000 has been formed, under the name of the St. Lawrence Car Works Co., to carry on a railway car building industry at Levis. The new company proposes to establish works capable of turning out 600 cars a year on the average, representing a value of $600,000 at least, and to spend over $60,000 a year in salaries.

A building permit was taken out by R. Bowman for a five-storey block at Vancouver. The building is designed for warehouse and factory purposes. It is understood that before it was planned a ten-year lease of the premises was made to representatives of a local industry, which will employ 50 hands as soon as operations are started.

Clare Bros. & Co., Preston, have let the contract for an additional storey to be put on the present building used as the stove mounting shop. Every manufacturing industry in Preston is working over-time and sorely taxed for space to make the turn over required to meet with the delivery of orders as they are booked.

Douglas Bros., a Winnipeg firm of sheet metal workers, have purchased a plot of land there on which a new plant will be erected. Work will be started at the first of the year, and it is the intention to spend $100,000 for the initial buildings and equipment. One hundred hands will be employed at the outset, but the plans of the concern will be so arranged as to allow of expansion.

A syndicate of Canadian business men, headed by a group of prominent Halifax gentlemen, and backed by the big shipbuilding firm of Swan, Hunter & Wigham Richardson, Wallsend-on Tyne, England, will apply for a charter of incorporation for a company, to be capitalized at $10,000,000, for the purpose of erecting large shipbuilding docks at Halifax and Dartmouth, and is said to have been purchased for the purpose.

The Ross Sleeping Car Co. are looking about Vancouver with a view to the establishment of a large car building plant there. The concern has recently been organized with large capital to put on the market a sleeping car of steel construction, which has many improvements over the cars now ordinarily used, these being covered by patents in the United States and Canada. The company expects to employ 500 men.

Public Buildings.

After the site for the new fire hall in Western Fort Rouge has been located the Winnipeg civic authorities will be ready for the erection of four fire halls, which will be built next spring. Each hall will cost about $13,000.

The B. C. Government is at present considering plans of the new Prince Rupert general hospital. The plans call for a two-storey structure to cost about $20,000. The work will be started as soon as plans are approved.

The contract for the erection of the new theatre to be built at Regina for Whitmore Bros., from plans prepared by Storey & Van Egmond, has been awarded to Murphy & Martin, at $16,000. The house is to be completed by the middle of December.

The contract for the erection of the new Royal Arthur school, at Montreal, was awarded to C. E. Deakin, by the Protestant Board of School Commissioners, at their last monthly meeting. The contract price is $82,452. The school must be completed by Aug. 10, 1910.

The Brantford Collegiate Institute trustees have accepted the bulk tender of Schultz Bros. for the erection of the new Collegiate Institute, the price being $64,519. This does not include, however, plumbing, heating, electric wiring, ventilation and dolomite flooring, which will probably boost the total cost close to $80,000 in all.

Work will shortly be commenced on the foundation and basement of the proposed new sanatorium at Little Manitou Lake, near Watrous, Man. At a meeting of the directors held in Winnipeg recently it was decided to appropriate $150,000 of the stock which has already been subscribed, and go ahead with the building at once.

The Vancouver school board instructed the building committee to commence at once the erection of an eight-room building in the south end, an eight-room building in the southwest part of the city, and an extra four-room adition in the east. In order to provide more accommodation, a manual training building is to be built on the Fairview grounds, so that the room now in use for manual training may be in condition to use as regular classrooms. These improvements are to be ready by the end of the midsummer term, next year; also the Kitsilano and Mount Pleasant schools are to have additions.

General Building Notes.

F. J. Smith will build a $10,000 dwelling at Toronto.

W. Cope will have a $30,000 block erected at Saskatoon.

The Bank of Hamilton will build a branch at Roland, Man.

Dr. Holmes will erect at Vancouver a $30,000 business block.

The Imperial Bank will erect a new building at Kamloops, B.C.

A $30,000 addition is proposed to be built to the Halifax Y.M.C.A.

MONTREAL

IVER JOHNSON
SAFETY AUTOMATIC REVOLVER

A revolver that can be discharged in any other way than by pulling the trigger is a mechanical absurdity as well as a constant danger.

The things you can do to an Iver Johnson Safety Automatic Revolver without discharging it would keep you busy all day. The one thing you can't do to it is—fire it in any other way whatever than by pulling the trigger.

Handsome in appearance, made in many styles—like a rifle for accuracy—hard-hitting and speedy—but always safe to handle.

Don't Let YOUR Profits Get Away

The Trade everywhere is making money on Iver Johnson Revolvers because they are good revolvers, absolutely safe revolvers, and widely advertised revolvers. We keep them before the reading public in the big magazines and the sporting papers.

Keep them before your customers, be ready to handle the enquiries we send you, get *your* share of the profits of our combined efforts.

James Esson has let the contract to S. G. Brauch for the erection of a business block at Preston, Ont.

W. T. Jackman has started excavating for a new business block at Chilliwack, B.C., to cost $4,000.

The contract for the Rookery Building at Winnipeg to cost $165,000 has been awarded to G. H. Walton.

J. Avery, Ladysmith, B.C., has been awarded the contract for the concrete work in the new convent school there.

W. W. Blair, Winnipeg, is preparing plans for a four storey office building to be erected at a probable cost of $100,000.

Plans have been prepared for a three-storey addition to the Revelstoke, B.C., Y. M. C. A. at an estimated cost of $15,000.

It has been decided to build an annex to the Royal Alexandria, Winnipeg, instead of an addition to the present building.

A lot has been selected at Goderich as the site for the Masonic Temple. It is proposed to have the foundation laid this fall.

The Bank of Hamilton has purchased a site adjoining the Y. M. C. A. building at Paris, on which they will erect a bank building.

The C. N. R. is negotiating with the Brandon Board of Trade in reference to the erection of an hotel on the company's land there.

Plans are being prepared for an hotel to be erected at Winnipeg at a cost of $85,000. F. A. Meyers, Fort William, Ont., is interested.

The Winnipeg Y. M. C. A. will procure plans at once for a Central building and a branch in the north end, the two to cost nearly half a million dollars.

Recent building permits issued at Lethbridge include: J. K. Smith, residence, $2,000; W. H. Johnson, residence, $2,500; H. Byer, three residences, $7,500.

A. D. McRae, president of the Fraser River Lumber Co., has awarded to the Gribble-Skene Co., the contract for a palatial residence at Vancouver to cost $100,000.

The C. P. R. are to build a large hotel at St. Andrew's, N.B. Plans have been prepared and tenders are now being called for, so that the work can start in the spring.

A building permit was issued to W. R. Arnold covering the erection of a steel and concrete block at Vancouver. The building will be two stories in height and cost $9,000.

Hon. Geo. A. Cox, Toronto, Ont., one of the directors of the Canada Life Association, announces that the company is having plans prepared for a business block to be erected at Vancouver at a cost of $275,000.

The Board of Directors of the Y.M.C.A. have approved of the purchase of a new building site at Montreal. It is expected that the contract for the erection of the proposed Westmount building will be let this fall.

S. Plante will build five houses at Montreal for $14,000. Jos. Beaudry will also erect there a dwelling for $12,000. Mr. Beaudry also got an alteration permit for $6,000 worth of alterations to his building at the same place.

Recent Winnipeg building permits include: W. R. Gorrell, dwelling, $7,000; J. C. Hicks, four dwellings, $2,500 each; Claydon Bros., apartment block, $45,000; B. C. Cockshutt, dwelling, $4,000; H. C. Davidson, dwelling, $3,000; Smith and Kirkpatrick, four dwellings, $4,200 each.

Work has been started on the foundation of the Eastern Townships Bank building at Grand Forks, and will begin on the Royal Bank building there at once. Both contracts have been awarded to McDonald, Wilson & Snyder, of Vancouver, and both buildings are to be completed before the end of the year.

Recent building permits at Vancouver are:—W. J. Harrington, two dwellings, $9,000; Mrs. D. Draine, dwelling and stores, $2,400; W. R. Arnold, concrete building, $9,000; A. E. Burnett, dwelling, $5,000; Purdy & Lonergan, dwelling, $4,000; F. Bowser, brick addition, $10,000; G. A. Boult, dwelling, $2,800; W. L. Keate, bungalow, $3,000; Reiley Bros., dwelling, $2,800; H. P. Falls, dwelling, $2,000; R. J. Coleman, dwelling, $2,800; W. W. Stuart, dwelling, $3,500.

Railway Development.

A system of belt lines is proposed for Port Arthur's street railway system.

The Canadian Northern is planning many extensions in the west and in British Columbia.

It is rumored that the Grand Valley Railway Company will extend their system to London next year.

A party of engineers has started from Pas Mission to locate the Hudson's Bay line from there to the bay.

The Calgary street railway management find it necessary to extend the present system, and will spend $40,000.

The Canadian Northern will be into Kamloops within two years' time and will go down the Thompson and Fraser rivers to the coast.

It is expected that track-laying on the Ontario West Shore Electric Railway, between Goderich and Kincardine, will commence in a few days.

The Chicoutimi Pulp Co. has awarded contracts for the construction of an electric railway from its mills to the limits in the Riviere du Moulin district.

The Winnipeg Street Railway has been notified by the city council that, owing to the increase of the population in the northwestern part of the city, it must extend its system.

The plans of the Montreal and Southern Counties Electric Railway comprise, besides the St. Lambert line, three extensions, viz., from St. Lambert to Chambly, a second to Longueuil, and a third to Laprairie and the up-river parishes.

Progress is being made by the survey party making preliminary locations for the line for the Victoria and Barclay Sound Ry. The party has reached Boulder Point, 40 miles from Victoria, and are rapidly approaching San Juan, the objective point for this season's operations.

The contract for the construction of the uncompleted portion of the Alberni branch of the Esquimalt & Nanaimo railway, a section of about 27 miles, at the western end of the road, has been awarded to Janse, McDonell & Timothy, Calgary. Construction will commence immediately.

Shut out of the Fraser river canyon owing to the prior location of the Canadian Northern Railway, it is stated that the Grand Trunk Pacific has virtually decided to seek another route for that portion of its proposed branch line between Kamloops and Vancouver. Its engineers have virtually completed the survey of the line all the way from Yellowhead pass via Cranberry lake and thence down the North Thompson to Kamloops.

The Retail Paint Trade

PUSH HOUSEHOLD LINES.

Paint dealers generally do not push their household lines hard enough. They probably extend themselves on exterior paints, but the varnishes, japans, stains and enamels which help so much towards beautifying the house are left to sell themselves. Probably the dimensions of the order in the two cases has something to do with this. Convince a property owner that his house wants painting and the dealer sells gallons of paint. Use nearly the same amount of energy in convincing a householder that the radiators, stove pipes or kitchen chairs want brightening up, and the merchant sells a small tin or so. But wait a bit.

The sale of a small tin is a customer gained. The merchant secures an entrance into the house. The name of the manufacturer becomes familiar, for no person either sees or uses a tin of stain or enamel without reading the labels which are made attractive for that specific purpose. That small tin is an advertisement for the merchant—he cannot venture to estimate what value it may be to him. It may mean an order for a large quantity of exterior paint next spring, it may mean one from a visitor to the house, and it may mean customers for other things outside paint.

Besides there is a large consuming field for these small tins, and a field that can be worked at a time when the paint trade is at its dullest ebb, and that is the winter. It is in the winter time that the head of the house is more often at home and can be coaxed into taking off his coat to do some needed embellishment. It is in the winter time that card parties and other re-unions demand extra chairs from the spare room or the kitchen to accommodate the guests. Besides the house on these occasions is on inspection. Everything must look nice, and nothing achieves that better and more quickly than a tin or two of stain or enamel.

Think of the number of houses in the community that could be brightened up this winter, and then set to work to get some of this trade. Even small tins when sold rapidly mount up. And the profit is good.

Cater for the women, for it is the women who buy household specialties. Arrange the windows to please the ladies, and attract their notice. Have ocular proof of what varnish can do with a chair that has been hardly used, or how aluminum can improve a tarnished stove pipe. Make the paint department pleasing to the eye, and so attractive that the women customers are drawn at once to the paint department. Cater especially for this household demand, and the dealer will have no occasion to complain of dull times around now in his paint department.

W. Dodson & Son, Hamilton, have the contract for painting the Otis Fensom Elevator Co.'s new building at that place.

Floorglaze

Sells All Year Round

With a full line of Floorglaze Enamels and Transparent Lacs (the new Floorglaze line) you can take care of a bigger trade without stocking so many kinds of paints and varnishes as you carry now.

Floorglaze

Good for All Purposes

Because Floorglaze costs less, looks far better and lasts far longer on any work indoors or out. You can guarantee it fade-proof, water-proof, and almost wear-proof.

The Montreal Rolling Mills Co.

PAINT AND OIL MARKETS

MONTREAL.

November 5.—Although very good orders have been received during the week, trade generally shows a slight falling off and it looks as if a quieter state of things were about to set in. This is only to be expected during November and succeeding months. Heavy consignments for the early spring trade are still being dispatched to those points which depend largely upon water navigation.

Linseed oil has again advanced, and the offer to book orders for January, February and March at lower quotations than at present prevailing has been withdrawn. A period of stiff prices is evidently anticipated. No other price changes are announced. The market is firm all the way round, and the general tone is very good.

TURPENTINE—The market continues firm. Buying is steady but not over active. Higher prices are anticipated in some quarters, but at present no changes have been generally made, and turpentine can still be obtained for 80c in single barrels.

LINSEED OIL—Linseed oil keeps on the upward trend, and quotations for immediate delivery have been advanced 1c per gal. The invitation to book January, February and March oil at lower quotations than at present prevailing has been recalled. It looks, therefore, as if lower priced oil is a long way off. In fact users may have to face further advances. A fair demand is reported without any great tendency to stock up beyond immediate requirements. We now quote: 1 to 4 barrels, in one delivery, raw, 73c per gal.; boiled, 76c per gal.; net 30 days, f.o.b., Montreal.

GROUND WHITE LEAD—The call for white lead is easy. Cut figures are still prevailing, although most of the grinders would like to see an advance. We quote: Strictly pure about $5.25 to $5.75, according to quality, and No. 1 $4.85 to $5.25 f.o.b., Montreal.

RED LEAD—Some heavy shipments are coming in, and being stored for winter use. The immediate demand is not over active. The market is unchanged, and we quote: Genuine red lead in casks, $4.25; in 100-lb. kegs, $4.75; less quantities at $5.75 per 100 lbs.; No. 1 red lead, casks, $3.75; kegs, $4.25, and smaller quantities, $5.25.

WHITE ZINC—The market is without feature, and the demand is slow. We quote: Dry V.M. Red Seal, 7½c; Red Seal, 7c; French V.M., 6c; Lehigh, 5c; white zinc, ground in oil, pure, 8½c; No. 1, 7c; No. 2, 5½c.

VARNISHES AND JAPANS—Shellacs form a very heavy item in all the varnish orders, and as gums are low in price there is a tendency to cut both for orange and white shellac in barrel lots.

PUTTY—The demand is keeping up well, and grinders are satisfied with the volume of business. We quote: Standard putty, 800 lbs., in casks, $1.75; in 100-lb. drums, $2; bladder putty, 400 lbs., in barrels, $2.15; in 100-lb. cases, $2.25; in 25-lb. tins, $2.15; 12½-lb. tins, $3.25, f.o.b., Montreal.

TORONTO.

November 5.—On the whole trading is fair. There is no big call for any particular lines, but steady demand exists for general paint goods for sorting-up. The movement in glass is good. Linseed oil and turpentine on account of advances are experiencing a lull, though when the trade realizes that the market in these two lines is firm buying will no doubt be better. Varnish prices are strong because of the high quotations of oil and "turps." Linseed oil has made another one cent advance. All other lines remain unchanged.

LINSEED OIL—This line has again advanced in price. The English market for seed has gone up somewhat further, and the American market now reaches very near the highest point in the last five years. A report comes from the Argentine Republic that there is a plague of locusts down there this year, which are likely to interfere with many crops, flax amongst the rest. If this should be confirmed it will make it almost certain that there cannot be any reduction in the price of linseed oil for the next six months. Some few orders are now being placed for future delivery. The local advance on linseed oil has only been one cent per gallon for present delivery, and three cents advance for futures. The new prices are 73c and 76c for raw and boiled oil respectively in barrel lots.

TURPENTINE—In regard to turpentine, there has been some little accumulation of stock of late at Savannah and it does not appear likely that prices will go any higher than they are at present for this season, though as the date for receiving stock is yet three months away there is no telling what may happen in the event of the ordinary demand continuing, which seems likely, as business in the line of paints and varnishes is still fairly brisk; the local market quotations are unchanged, 83 cents being the ruling figure asked with several houses asking from one to two cents below this.

WHITE LEAD — Sales are fair in size, and prices remain at $5.55 to $6, though some outside points are said to have been buying in quantities below this.

RED LEAD—Demand is good at the usual prices—$4.25 for cask lots and $4.50 to $4.55 for 100-lb. packages.

GLASS—Sales are splendid for glass, so all jobbing and importing houses report. The market is getting firmer, though slowly. The 30 and 5 off and 30 and 10 off on specifications which have been ruling all summer have advanced generally to 30 straight, and one house has gone one better by making the discount 25. Stocks in jobbers hands are

White Lead

At the present time the white lead situation is interesting.

We are the only firm in Canada who corrode and grind white lead, in addition to making Varnish, Dry Colors, Paints, Enamels, etc., etc.

Our white lead proposition is naturally the very best.

NEW YORK CHICAGO LONDON BERLIN BRUSSELS

low, and arrivals are coming forward in small lots only. The last boat to Montreal left the other side yesterday (November 5), and further importations will have to come by way of Portland or St. John at winter rates and at a higher freight cost. This leads one to believe that higher prices here will soon be in order, especially as it is now said that Toronto prices at present are below Montreal's quotations.

PUTTY — Orders are good and the movement of putty is seasonably heavy. Prices are firm. Casks are $1.75; 100-lb. drums, $2, and bladders, $2.15 to $2.25.

PETROLEUM—Delivery continues in strong volume. Quotations are unchanged. Pratt's astral is 17½c; water white, 15½c; and prime white, 13½c.

A KNOWLEDGE OF PAINTS.

A definite, comprehensive knowledge of both the use and abuse of paints is something every dealer should take pains to acquire, says Hardware Trade.

Such information is vital to the dealer's success. It will increase both the volume and profit of his paint business.

And when one comes to study this paint question, sees on every hand such vast possibilities for extending it, and realizes the fact that a large percentage of paint business eludes the dealer every season because of this lack of definite knowledge, it is enough to "make angels weep." Paint, as marketed to-day, is one of the cleanest, easiest and quickest moving commodities handled by the retail dealer.

But the great trouble to-day is, too many dealers merely "handle" paint. Most of them know there is a certain demand for paint. So they handle paint because people ask for it. There is a vast difference between "handling" paint and "selling" paint. The former requires no effort on the dealer's part. He merely supplies that portion of an existing demand that strays into his store. The latter calls into play the dealer's abilities as a salesman. It draws upon his knowledge of paint; demands a study of the needs of his customers and prospective customers; requires of him painstaking effort, unceasing and conscientiously carried out.

If even one-half the thought, effort and money expended annually by paint manufacturers in educating consumers in the uses of paints and finishes were made use of by the dealer, his paint sales would grow at a rate not only gratifying but astonishing to him. Before the retail paint dealer can develop his paint business as it should be, he must know it thoroughly. Then he must make full use of the selling forces the manufacturers places at his disposal.

It is in this failure to use properly the selling forces of the manufacturer that the dealer loses most of his opportunities to develop and enlarge his paint business. And it is too bad to see so much productive energy going to waste; to see a retail paint business either dwindle to nothing or remain stationary, when it ought to pulse and throb with life and activity, growing, expanding, always reaching out for "new worlds to conquer."

FOLLOW-UP LETTERS.

Every merchant should have a follow-up letter system. He should have some dignified and accurate method of ascertaining if the various purchases made by customers at his store have met their requirements. He should try to learn, too, why this or that customer who formerly traded with him quite regularly now goes elsewhere for his goods.

A customer who has visited your store regularly for years or some months, and then ceases coming should be sent a dignified, courteous letter, asking why he or she has ceased to trade with you.

If possible, the dealer should obtain the name of every new customer who comes into the store. This may be done by offering to have the package he or she buys delivered. In this way both the name and the address are easily gotten. A record of this should be kept, together with the date of purchase.

Your clerks should be instructed to watch for the second appearance of that customer in the store. If the customer does not come again, a polite formal note should be mailed, asking if the article purchased did not meet the requirements of the purchaser and offering to adjust the matter satisfactorily if anything is wrong.

CONFIDENCE IN YOUR GOODS.

In carrying an agency for mixed paints the dealer must be certain that he has a reputable line. He must be certain that the goods are all right, and that the price is fair, for these are the points which can alone carry him through. As other men cannot reap any of the advantages of his advertising and selling campaign, so he cannot reap any advantage from theirs, and, therefore, he must rely solely upon the quality and price of his goods. If people once take an objection to his brands, then his case is a hard one.

GOOD COLD WEATHER SELLERS.

Carriage heaters or foot warmers are good sellers for cold days. The Chicago Flexible Shaft Company, in their "Big Hit" assortment have a line which contains 2 each of their three best selling heaters and 6 dozen bricks of the celebrated Clark coal. No castings of any kind are used in the Clark heaters and each one is guaranteed to please and satisfy the purchaser or money will be refunded by the Chicago Flexible Shaft Company who sell to practically all the leading jobbers in Canada.

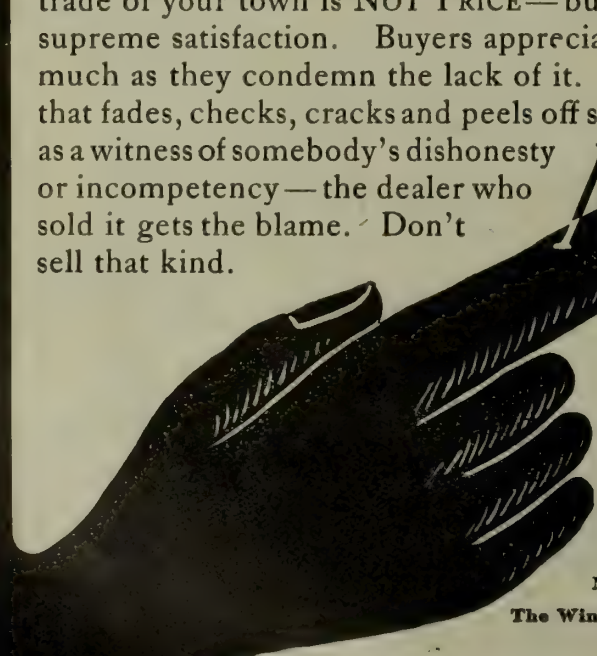
ALABASTINE

THE MOST POPULAR THE MOST SALEABLE

WALL COATING

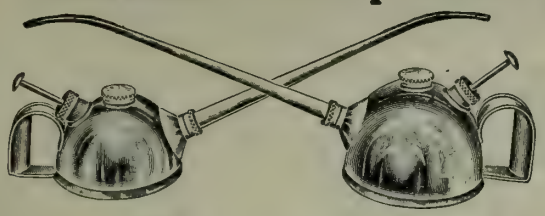


You do not need to spend time and energy talking it up and introducing it.
You carry a full assortment, it sells itself, and we advertise and sell it for you.
It pleases the eye for color and the artistic sense.
Is ready for use by simply adding COLD WATER.
Anyone can get beautiful work with it by following the simple directions printed on each package.
It is permanent, sanitary and antiseptic. Can be re-coated, coat on coat.
It will not moulder and decay, or rub off.
There is nothing else on the market, whether mixed in boiling or cold water, which will produce the permanent results or soft, beautiful tints peculiar to Alabastine.
It is not a kalsomine that has to be washed and scraped off before you can redecorate.
Order direct or through your nearest jobber.

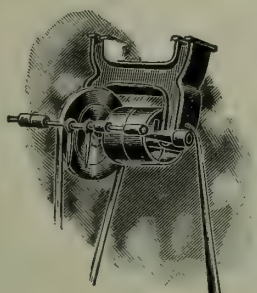
THE ALABASTINE CO., Paris, Ont.
Patentees and Manufacturers

A Strong Point

The strongest inducement you can offer for the best paint trade of your town is NOT PRICE—but a paint that will give supreme satisfaction. Buyers appreciate "QUALITY" as much as they condemn the lack of it. The paint that fades, checks, cracks and peels off stands as a witness of somebody's dishonesty or incompetency—the dealer who sold it gets the blame. Don't sell that kind.



Martin-Senour



PAINT—100% PURE

will help you to make lasting friends of the people you sell to. It will help you to establish your business on a firmer, surer foundation. The requirements of paint are varied—the paint that best meets the most of them is the best for you to sell—that's *Martin-Senour 100 per cent pure paint.* It will be a big strong point in your favor when you can offer this paint to your patrons. Why not write for the Agency today?

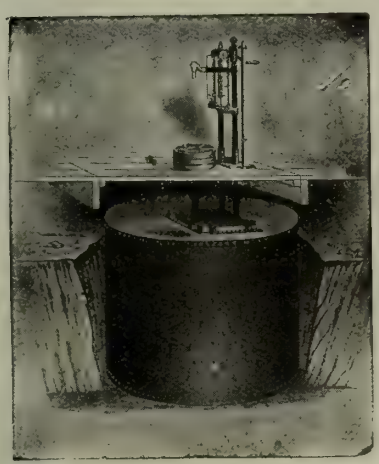
A LIBERAL AND PROGRESSIVE COMMISSION OFFER FOR PUSHFUL PEOPLE

That young man who seizes every opportunity to turn an honest penny during his spare time is likely to soon develop from *clerk* into *proprietor.*

That's the kind of young men we are looking for—men who are willing to use some of their spare time in pushing a profitable business proposition.



We want some *really pushful local agents* for the MacLean Trade Papers, The Busy Man's Magazine and The Financial Post. For those who will push there's *good money* to be made everywhere in Canada.

The commissions we are offering are *extremely liberal.* Moreover, they are *progressive*; *i.e.*, the more subscriptions secured the higher the rate of commission paid.

Hadn't you better get the facts of our plan? Just sit down and write us for full particulars.

THE MacLEAN PUBLISHING CO., Ltd.
Circulation Department
10 Front St. East, Toronto

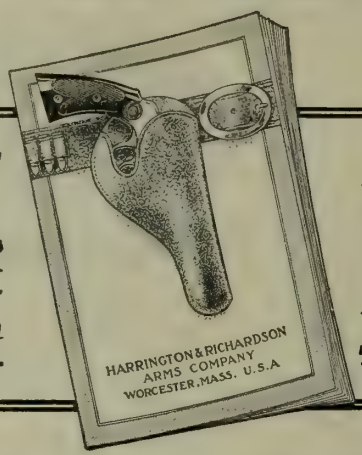
Turn Your Losses Into Profits

Every drop of oil you are now losing through leakage, evaporation and waste means just so much out of your profits.

Stop these losses, turn them into profits by selling your oil from a Bowser Self-Measuring Oil Tank. The Bowser adds to your profits every year an amount that would surprise you.

Is not an investment like this at least worth a thorough investigation? It will cost you but one cent to send a postal for Catalog 5446. Write to-day.

S. F. Bowser & Co., Limited
66-68 Fraser Ave. - TORONTO



If you have an old Bowser and Want a new one, write for our liberal exchange offer.

Department of Railways and Canals

QUEBEC BRIDGE

TENDERS FOR SUBSTRUCTURE

NOTICE TO CONTRACTORS

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Bridge Substructure," will be received at this Office until 16 o'clock on Tuesday, the 30th of November, 1909, for the building of the Substructure of the Quebec Bridge.

The General Specification and form of tender will be ready about November 20th; but in the meantime, Contractors are invited to visit the Office of the Quebec Bridge Board of Engineers, Canadian Express Building, Montreal, for the purpose of securing preliminary information to enable them to submit tenders for this work.

Parties tendering will be required to accept the fair wages Schedule prepared or to be prepared by the Department of Labor, which Schedule will form part of the contract.

Contractors are requested to bear in mind that tenders will not be considered, unless made strictly in accordance with the printed forms, and in the case of firms, unless there are attached the actual signatures, the nature of the occupation, and place of residence of each member of the firm.

An accepted bank cheque for the sum of $120,000 made payable to the order of the Minister of Railways and Canals must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work, at the rates stated in the offer submitted.

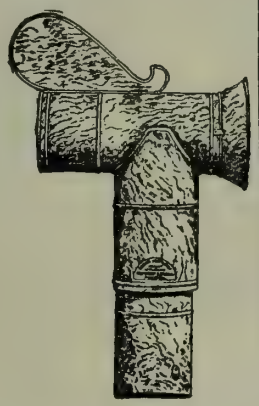
The cheque thus sent in will be returned to the respective contractors whose tenders are not accepted.

The lowest or any tender not necessarily accepted.

By order, L. K. JONES, Secretary.

Department of Railways and Canals,
Ottawa, 26th October, 1909.

Newspapers inserting this advertisement without authority from the Department will not be paid for it.



FIX UP YOUR CHIMNEYS

Even the best stove or furnace will be unsatisfactory if the chimney does not draw well. But the

"Zephyr Ventilator"

will give a good draft to any chimney. It will even allow the burning of soft coal in the stove, with good results.

We want you to sell the "Zephyr Ventilator" in your town. There is money in it, and the satisfaction that it gives will bring you new customers. **The "Zephyr"** cannot be excelled for ventilating the rooms of **Clubs, Steam Laundries,** etc. **The "Zephyr" makes high chimneys unnecessary.**

MONTREAL, Dec. 6th, 1905

J. W. Harris Mfg. Co., Ltd.,
Montreal.

GENTLEMEN:—

In reply to your valued favor of the 27th ult., beg to state that the "J. W. HARRIS ROTARY VENTILATORS" installed in our premises are giving satisfaction, and we have much pleasure in recommending them to anyone seeking thorough ventilation.

Yours truly,

Every Test Proves the Superiority OF GREENING'S Patent COW TIE

TWENTY YEARS OF PRE-EMINENCE.

Quality is the basis of all values, and time the critical trial of all things. Long established houses know this, and realize that the only permanent satisfaction in business comes from handling the best.

Greening's Patent Cow Tie has been proved by the tests of time, wear and endurance to be the strongest on the market. Back of it is a reputation of a score of years. These Ties are of seven kinds and are made in six sizes.

We have a complete line of all sizes ready for shipment.

Insist on getting " Greening's " from your jobber.

CURRENT MARKET QUOTATIONS.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

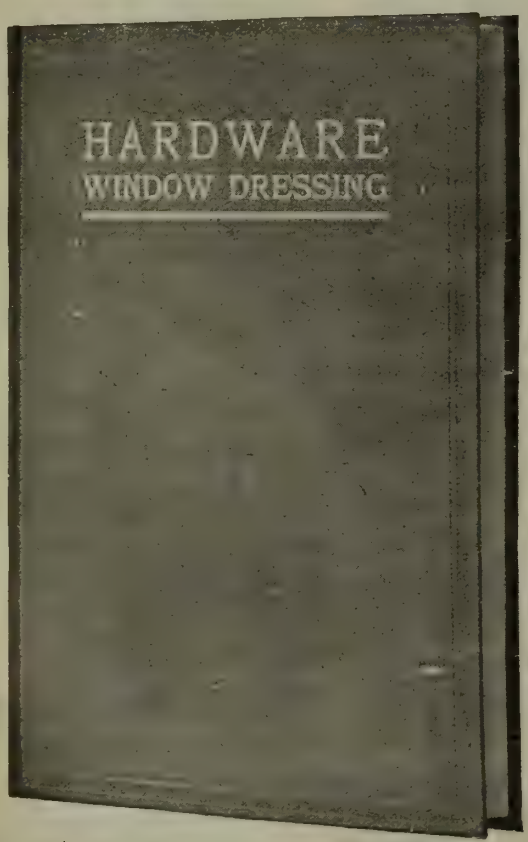
A Western Sportsman's View of

The ROSS SPORTING RIFLE

Crandall Beamish, writing from Onoway, Alberta, says:—



"The Sporting Rifle I bought of you is giving first-class satisfaction. It cannot be surpassed for accuracy and smoothness of action. I can heartily recommend it."

The same sentiment is expressed in hundreds of testimonials from all over the world. The points that are universally emphasised are—

Appearance - Accuracy - Reliability

There is no part of Canada from which these reports do not come, and there is not a town in Canada where Ross Sporting Rifles will not be in demand.

ROSS RIFLE CO. - - QUEBEC

You May Become a Practical Window Dresser For $2.50

This is the first book ever written devoted exclusively to Hardware Display, and has been off the press only a few weeks. It is a practical, up-to-date collection of ideas of the most expert window dressers in the world. There are hundreds of displays in the book that can be put in at practically no expense—any one of them will bring enough extra trade to the store to pay for the book many times.

26 Pages **8x11 Inches** **300 Illustrations**

Price $2.50. (Payable in Advance)

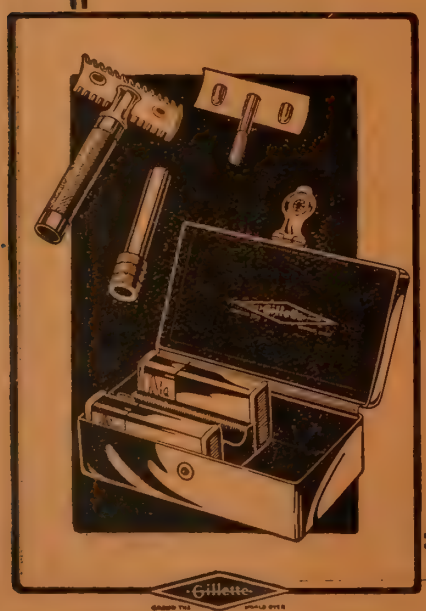
Gillette Leads

Others Seem Content to Follow

The almost universal truth that "one leads – others follow" is perhaps nowhere better illustrated than in the Safety Razor field. GILLETTE always has been and is to-day the leader both in making and in selling.

In point of time the GILLETTE was the **first practical Safety Razor.** The principle of the razor patented by King C. Gillette 9 years ago was correct, and human ingenuity has not yet improved on this principle.

GILLETTE was the first to perfect a Pocket Edition, adding so much to the convenience of men who travel.



GILLETTE was the first to use an all-metal case, first for the blades, and then the whole set.

In point of quality the GILLETTE "New Process" blades carry the finest shaving edge that has ever been produced. Razors stand or fall by their cutting edge—the GILLETTE stands pre-eminent. It is made to shave and it **does** shave.

In point of attractiveness the new Pocket Editions in gold and silver plate and gunmetal finish, with embossed metal cases to match, are not approached by any other razor on the market.

In advertising, GILLETTE spends every year a sum greater than the combined sales of all the other safety razors in America. And the advertising is worthy of the razor. The result is that when you speak of "safety razors" nine men out of ten think of the GILLETTE.

In Sales—to come right home to **your** cash account—the Gillette outdistances all others combined. The sales for 1909 will total about one million. Haven't you yourself sold more GILLETTES than all other safety razors put together?

The genius—the energy—the ambition which have produced the GILLETTE and made it the most popular razor in the world, are still behind it, looking and working for greater things. Dealers can always count on our hearty and **continual** help—we sell the GILLETTE for you as well as to you.

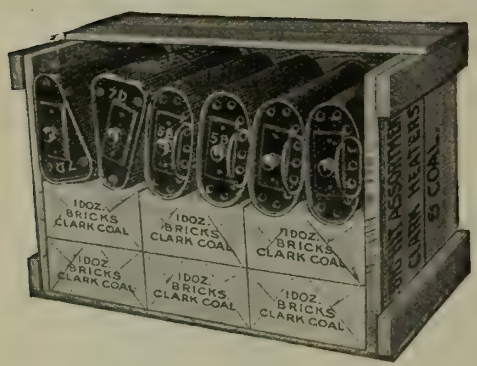
Dealers, Take Notice!

25 Years Ago we began manufacturing Metallic Roofing. The first years were trying ones, but our policy, adopted at the start—PROTECTION TO THE DEALERS—together with the fact that only the highest quality material is used in the manufacture of our roofing, won out, and placed us at the top.

Our Strong Protection Wall surrounds the trade. We want your co-operation. Success for you means success for us.

Our Extensive Advertising creates a market. Don't let your competitor reap all the benefit. Get your share.



Our Metallic Roofing stands the test. 25 years has proved it. Our catalogue of Metallic Building Material will interest you—write for it.

Sell Clark Heaters and Coal

Here's the "BIG HIT" Assortment

2 Leader Heaters
2 No. 5B Heaters
2 No. 7D Heaters

6 Dozen Clark Fuel Brickettes
(Best Grade)

Some of these heaters you can sell as low as $1.20 and make a good profit.

The Proposition to Dealers is Mighty Interesting

Its a proposition that means ready sales and liberal profits.

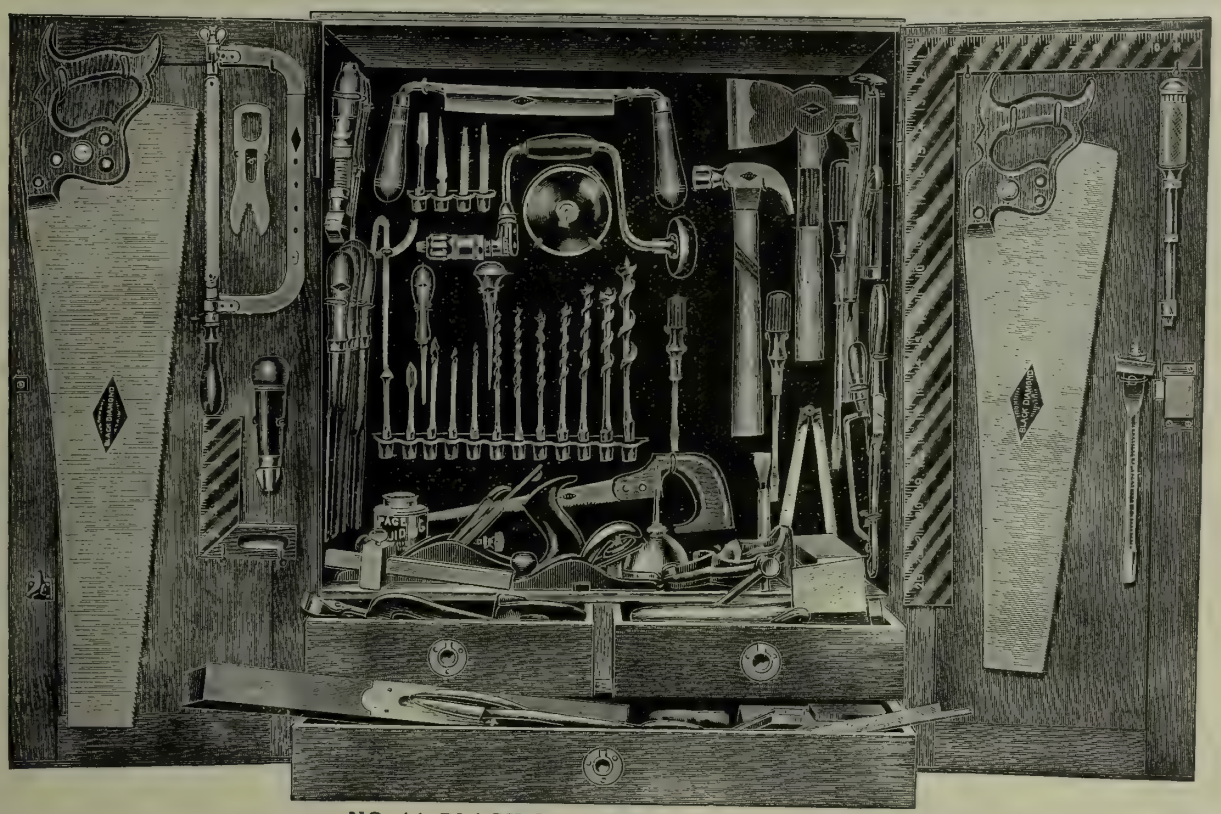
Everyone who drives or owns a carriage, wagon, sleigh, automobile—any kind of vehicle—needs them. Everybody traveling in cold weather needs them. The need is known—the demand is positive—It's for the dealer to supply the product and pocket the profits.

Clark Heaters and Clark Coal sell wherever displayed. The wonderful compactness, the unique principe of heat distribution, the neat appearance, the low price—all are factors that make Clark Heaters the unchallenged leaders.

Our guarantee goes with each, and the guarantee protects the dealer and the consumer.

And the coal is just such another proposition. To **prove conclusively** that it's better than other fuel, we give a guarantee, **with each brickette,** that it will give 25 per cent more heat than any other heater fuel made.

DEALERS——ACT NOW



The season is on. Send for the "Big Hit" assortment and add more dollars to your profit. Send to your jobber. Put a heater just inside your store—where customers can **feel** the goodness of it. "Warm them up" to the necessity of buying from **you.** We'll help.

MERITS

that should appeal to all users of gas tubing are embodied in this new line of English Tubing, which we have on hand and is known as

Indestructible Gas Tubing

To start with, the ends of the tube are made of the highest quality rubber, and are easily attached or detached as the case may be; then the tube itself is made of an alloy of steel, constructed in such a manner as to be absolutely **Fire Proof** and extra pliable (you may coil it around your hand); also, there is no kinking or disagreeable odor. "It will wear like iron." We would like you to try it. In all lengths from 2 ft. to 12 ft.

GRAHAM NAILS ARE THE BEST

The Highest Awards—Grand Prix and Gold Medals at A-Y-P Exposition, Seattle, Washington, 1909.

There are so many Real Points of Perfection about a Disston Bucksaw They're Easy to Sell

You would find it remarkably interesting to follow the progress of a DISSTON Bucksaw through the departments of DISSTON'S 50-acre plant. The wood is taken from DISSTON lumber yards where it is allowed to season for **several years.** The steel is the steel that goes through processes which has made DISSTON SAWS unmatchable.

This is only one of a list of shapes and styles. See catalogue mentioned below.

Show your customers the variety of shapes and styles which DISSTON'S experience of some seventy years proves to be best. Point to the styles of blades—to the bracings—to the varnishing—the ease of handling—the strength—the absolute rigidity—to that fact of utmost importance, namely, THAT IN A DISSTON BUCKSAW THERE IS NO LOST MOTION OR GIVE.

FREE Send us a postal for a DISSTON Catalogue -- it gives lists of Saws and Tools which interest your customers on sight. DISSTON goods have increased the DISSTON business, and they will increase your business also.

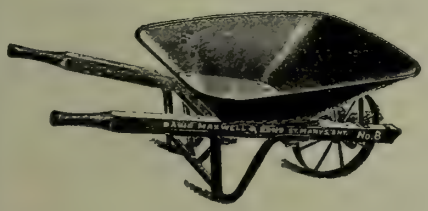
THE POPULAR "MAXWELL" LINE

of hardware specialties is not only a source of substantial profit to the dealer—it is an advertisement for his whole store. The superiority of the "Favorite" Churn, the "Puritan" Washer, the "Imperial" Wringer and Maxwell Lawn Mowers is so well known that the dealer who handles them quickly gets a reputation for high-class goods. : : : : : : : : : : : : :



The "Favorite" Churn

has been for years the best seller in Canada. Its light, rigid base, roller bearings, easy combination hand and foot drive, axles bolted to the barrel, metal parts aluminum finish—these are some of its strong features. Made in 8 sizes, to churn from 1-2 to 30 gallons.

The "Puritan" Washer

is also an old favorite because it is so easy to turn, it washes so quickly and is so substantially made. Its users know—and tell others—what light work it makes of wash-day. With the Puritan Motor attached it is the ideal washer—it does the washing itself.

Maxwell Wheel Barrows

are made in 9 different styles—a style for every kind of work—large, strong, general-purpose barrows—light garden barrows—steel tray mortar barrows—and everything in between.

Write for particulars about our new "Champion" High-speed Washer, our "Blue Belle" and "Spotless" Washers, "Blue Belle" and "Royal Canadian" Wringers, our new "Royal" Mangle, Lawn Mowers, etc.

Get More Business

Would you be surprised to know there are customers all around you who would buy Genasco if you'd get after them? There are people right in your territory who have been stirred up to the buying point by our continuous convincing advertising. We have shown them that roofing made of Trindad Lake asphalt is the only kind worth while.

Ready Genasco Roofing

has the lasting life that only Trinidad Lake Asphalt can give—and we haven't been afraid to tell what it is made of.

This has inspired confidence and made customers want this honest, economical roofing. A little effort on your part will land these customers. That means increased business and added profits for you.

Mineral and smooth surface Genasco roofings. Guaranteed by our thirty-two-million-dollar organization.

Quality is Rewarded

We have shipped so far this year **4** times as many Butts and Hinges as we did last year—and have not had one complaint about quality or workmanship.

The merchants who handle "Crescent Brand" Butts and Hinges know how their trade has increased.

You can get them direct if your dealer will not supply you—and they cost no more.

THERE'S MONEY IN TRAPPING

You can increase your business by dressing your window as illustrated below. The entire cost of reproducing this window will be about $2.00

Hundreds of boys will see this display and want to trap. They can earn from $10.00 to $25.00 a week trapping before and after school.

$5.000,000 worth of furs were caught and sold in Canada last season.

Fur prices were never higher than at present:—

Weasel.....	25c. to 40c. each	Mink.....	$3.00 to $6.50 each
Muskrat	20c. to 35c. each	Coon.....	50c. to $1.50 each
Skunk.....	$1.00 to $2.00 each	Fox.....	$3.00 to $5.50 each

We will furnish display cards and specifications free.

Be sure to write us for full particulars regarding the dressing of this window.

SUPERIOR POINTS IN THE "EMPIRE" STEEL RANGE

1. The **two flues** ensure even heat distribution, the oven bottom will never warp, and it will bake every part.

2. It is fitted with interchangeable **Fire-Back** and **Duplex Grates.**

3. It has **large Broiler Door** and **Poker Door.** Soot can be quickly cleaned into ash pit from beneath the oven.

4. **Reservoir** is large, heats water quickly and retains the heat long time.

These are only a few features of the Empire Steel Range. This range has no superior and mighty few equals, and its price will interest and surprise you.

Abercrombie Hardware Co., Vancouver, B.C.

IT HAD TO COME!

¶ You needed it, the public asked for it, and so it came about we got our heads together, determined to produce—the best base burner. Like the magician we say, "here it is"—but then we go further—we prove why we believe and know it to be the best. Its beauty of design is readily acknowledged—the inner excellence is what we seek to prove. The vital question is "efficiency"—practicability, as you find it in the

ART LAUREL BASE BURNER

Memorize This—It's Sound Heating Logic

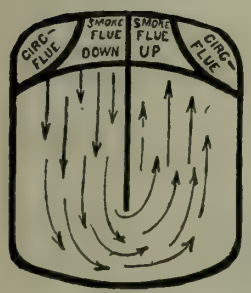

Figure 1

¶ Figures 1 and 2 show the method of base burner radiation as is generally used. A base burner, to be entirely satisfactory, must have a properly-proportioned circulating flue. Now, the back and the base is the most valuable radiating surface—that you'll admit—then what about figures 1 and 2? Is the heat properly cared for? Figure 1 shows the circulating flue crowding in on the greater portion of the main back; figure 2 shows the combustion split in two sections, but this don't increase the radiating surface—the circulating flues are but two-thirds surrounded by heat.

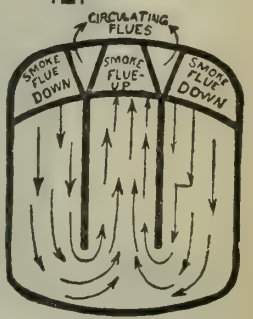

Figure 2

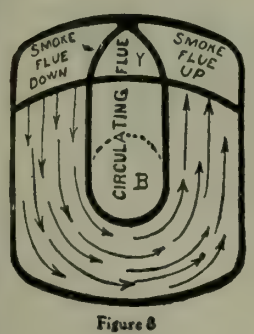

Figure 3

¶ Figure 3 shows the Art Laurel method—no sharp turns—no flue strips. Notice the large circulating flue—how the heat plays all round it. The hot-air circulating flue is not only a channel for heating the air—it also takes the cold air from the floor at the centre of the main bottom, passing it to the back flue (Y) and then to top of jacket in one strong column, absolutely surrounded by fire surface. That's "Art Laurel" heating logic.

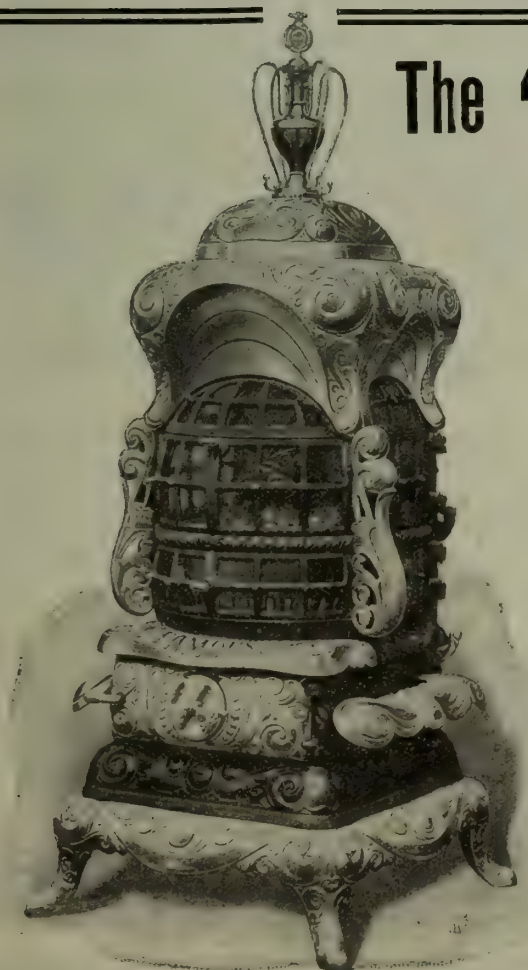
DAVIDSON'S
"Premier Marathon"
STEEL RANGE

IS NOW A LEADER on account of its proved perfection and neat appearance

We have used heavier gauge steel than usual in making this body.

Special attention has also been paid to adapting the fire box for wood as well as coal and it will take comfortably a 28-inch stick.

The New Duplex Draft with which every "Premier Marathon" is fitted assures perfect combustion at both ends of the fire box.



This range has many other desirable features and the number of repeat orders received plainly show that the criticising public have found them satisfactory.

Holiday Prize Competitions

Open to Canadian Hardware Merchants and Clerks

SIX PRIZES FOR WINDOW DISPLAYS

For the three best selling window displays shown in a city over 10,000 population, and for the three best in towns and villages under 10,000 population.

In each division there will be three prizes as follows: 1st, $5 in cash; 2nd, and 3rd, copies of "Hardware Window Dressing" (cloth bound) $2.50—making in all six prizes, totaling in value to $20.

To enter the contest send a clear photo of one or more Christmas windows, made up of articles usually sold in hardware stores, with a description and the name of the person who arranged the display. Photos must be mailed to us by December 31.

TWO PRIZES FOR HOLIDAY ADS.

Two prizes of $5 each are offered for the best newspaper advertisements about Christmas goods, such as cutlery, silverware, sporting goods, lamps, stoves, carpet sweepers, household goods or other holiday lines. Forward one or more clippings from your local paper to us, with the name of the writer of the advertisement, and the name of the paper it was clipped from. As in the window competition, a division is made, one prize being open to those in cities over 10,000 population, and another to those in smaller places.

With the ad. send a copy of any booklet issued, and a description of any special selling plans or display features used during the holiday season.

The awards will be made by experts, and will be announced, with reproductions of the prize ad, and windows, shortly after the close of the contest. All entries should be mailed not later than December 31.

Burman's British Clippers

Made in Birmingham, England, by BURMAN & SONS, Limited

Why British?

Simply because BRITISH workmen take greater pains in all their mechanical work than any others; the BRITISH steel has never been surpassed in any country and then BURMAN'S CLIPPERS are known in the four corners of the globe, not solely because they are BRITISH but because they are the BEST ALL ROUND CLIPPERS MADE ANYWHERE.

EVERY UP-TO-DATE dealer knows the name. They are asked for by PARTICULAR people.

BOWN'S NEWMARKET clipper is ours. It is tried and found the best. It brings REPEAT ORDERS.

The "GRAND" (ball bearing) clipper is the ONLY genuine BALL BEARING clipper produced to-day. NICKEL plated and black ebonized handle. SELLS on sight.

"THE HANDICAP" is less in price but it has QUALITY that is HIGH. This is a centre adjustment clipper: is simple in construction and has been a great favorite in all the COLONIES. IT IS THE CANADIAN STANDARD.

NO 17 POWER CLIPPER IS UNIQUE and UNRIVALLED. YOU KNOW ITS EXCELLENT patent CLIPPING HEAD; its wonderful CUTTING QUALITIES; its ANTI-FRICTIONAL design and its PERFECT BALANCE, running always lightly and EASILY. The gearing that runs the machine is in a DUST-PROOF GEAR BOX and it sells on sight. BURMAN'S NO. 17 Clipper weighs ONLY 35 lbs. packed. Size 26x8 inches.

VALUE OF GOOD COPY

Personally, I believe "ads." in trade papers should be made so attractive, so interesting in some way that the merchant as he glances through the trade journal will stop and see what you have to say. The simple announcement that you are in business is not enough. I don't care how prominent a firm is, they should not get the idea they are so big that all they need to do is to reproduce their name on a page in a trade journal and say nothing more. They should do something to make the merchant curious; in fact, somewhat anxious to meet the travelling man you are sending out to represent you.

—*TOM MURRAY, Chicago.*

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, munufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

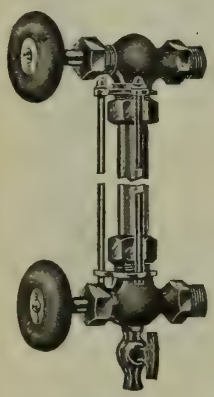
106 N. Francisco Avenue, CHICAGO, U.S.A.

PLYMOUTH CORDAGE CO.

PLYMOUTH **WELLAND**

It is well known in a general sort of way that Manila rope is the best for most purposes. But there are many grades of Manila fiber.

The manufacturer may use in his rope hemp of poorer quality than good practice permits, yet he may still be entitled to call his rope "Manila" or "Pure Manila." Thus he can probably sell his rope at a less price. It is worth less.



"PLYMOUTH" rope is the rope of quality—is made in one grade only—has been the standard for 85 years.

In buying rope it is safer to specify "PLYMOUTH Manila," which means satisfaction always.

How to Interest New Customers in the Store

Berton Elliott, in the Hardware Bulletin, Describes Some Plans Known to Have Been Used Successfully by Merchants—Ways of Interesting Children in the Christmas Goods on Display in Hardware Stores.

There is practically no limit to the plans that mey be used by the retailer to stimulate and create trade. A number of excellent books are published on the subject. Almost every issue of your trade journal has some good ideas of this kind to offer. Many effective sales plans, however, are the result of the dealer putting on his thinking cap and designing something especially suited to his particular case.

I would make moderate use of good sales plans. I do not think it well to be overly liberal in their use, however, for if you have something of the kind going on all the time, they are quite likely to grow tiresome, or, at any rate, will not attract the same amount of attention to your store as if you spring something out of a clear sky every now and then. It's a good plan to shut off the current every little while just to have a chance to turn it on again. Some of the plans which appeal to me as being particularly good, and which I know to have been used with good results, are as follows:

Guessing Contests Bring Trade.

Guessing contests are perhaps the most common. Probably no form of guessing contest is more successful, as a rule, than a penny guessing contest. Fill the show window with bright new pennies and offer prizes to the first three persons guessing nearest the correct number displayed. The guessing may either be open to anyone, or limited to those making purchases. If limited to actual purchasers, the prizes should, of course, be more valuable than otherwise. If confined to purchasers, one guess for every dollar's worth purchased is generally a pretty good plan. A good prize would be from ten to twenty-five silver dollars, which could be piled up in the window along with the pennies. On the closing day of the contest arrangements might be made to have a couple of bank clerks enter the window and count the pennies in full view of people from the sidewalk.

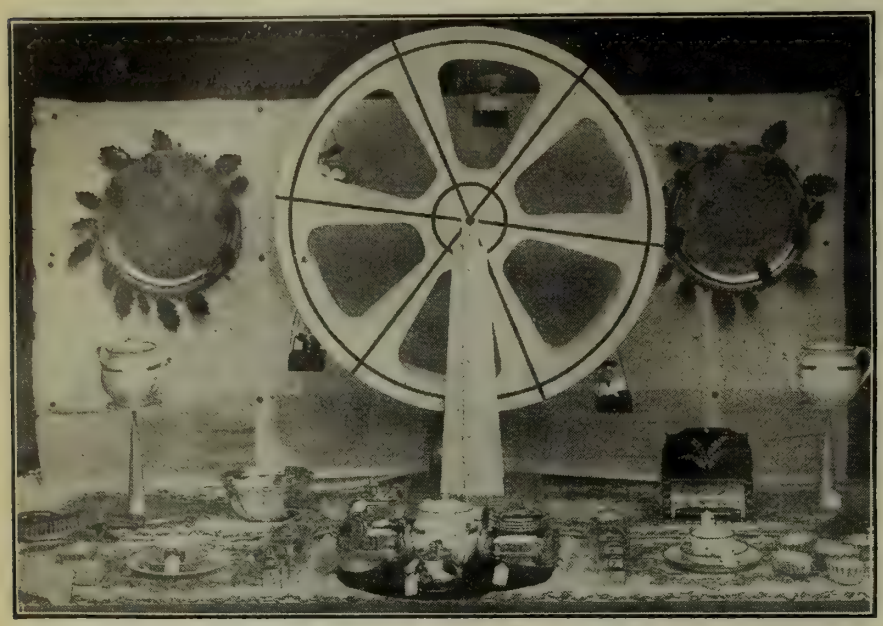
This is typical of guessing contests, which may embrace guessing the number of beans in a jar, when a clock will run down, when a candle will burn out, etc., etc. Care must be taken in contests of this kind not to advertise them in the newspapers or by means of circulars sent through the mails, as the Post Office Department bars from the mails all matter pertaining to contests that are dependent upon chance rather than skill or judgment. This does not mean that the merchant may not conduct guessing contests, but simply that he will not be permitted to advertise them through the mails.

Voting Contests and Premiums.

Another form of contest that is very popular is the voting contest. This is as old as the everlasting hills, and there is no end to the variety of contests that have been used with more or less success by dealers everywhere. One of the best of these is a contest for the most popular school, in which a liberal prize is offered to the public or private school receiving the greatest number of votes, one vote to be given with every ten-cent purchase. If you "get in right" with this contest and the public takes to it, it will produce exceptionally good results, as the interest and enthusiasm of the school children and school teachers of the town is a powerful force to have working for you. Other voting contests may be held for the most popular young lady, little girl, married couple, minister, club, etc.

A good idea for a ten days' sale is to refund the full purchase money on every tenth or every twentieth sale. If the store is large enough it would be a good plan to ring a big bell every time a purchase is given away free. Customers who are fortunate enough to have their money refunded spread the news among their friends, and in this way such a sale is always liberally advertised, and extra trade should be brought in to more than take care of the purchase money returned. Another similar scheme is to refund one day's cash sales to all customers a certain day each month, the day to be determined by ballot at the end of the month.

It is natural for people to want to utilize anything they possess which represents a definite, known value, even if necesary to buy things they would not otherwise buy, in order to take advantage of their good fortune. A due-bill plan of some sort is almost always mighty successful. Take a selected list of customers and offer them, in appreciation of their patronage, a certificate which you will accept at $1 in money on total purchases of a stipulated amount before a certain date.



Holiday Window, Arranged by E. B. Swackhammer for R. F. Johnstone, Acton.

Interesting the Children.

Schemes which appeal to children are, as a rule, unusually successful. Children enter into the spirit of the thing with great enthusiasm, and if the scheme possesses merit they generally succeed pretty well in interesting the entire household. Free tickets to the picture show with every purchase of a stipulated amount appeal readily to both boys and girls and older people as well. Other ways of getting trade through children is a prize essay competition for school children, and prizes for the largest number of English-spoken words made from the letters contained in a certain word or sentence.

The plan of holding annually a sale lasting one week, during which two per cent. of the gross receipts is given to employes has been used for some time with wonderful success by one merchant.

Mechanical Ferris Wheel Display, made by Dakin Bros., Digby, N.S.

This seems to be an unusually good scheme, as it not only creates a feeling of good will on the part of the clerks, but gets them to boost the sale in a most enthusiastic manner and is sure to bring in a lot of extra customers who are interested in helping the clerks.

The Holiday Toy Trade.

There is almost always an opportunity to pull off some unusually good special sales on holidays and other special occasions. A very good plan for Christmas time is to distribute toys to the children by means of numbered tickets scattered by the thousand throughout the city and surrounding country. Secure twenty-five toys suitable for both boys and girls and have a number assigned one of them each day by disinterested parties. Display the toy for the day just inside your store, and invite holders of tickets to call and see if they hold the lucky number. If any prize remains uncalled for by the third day, assign a new number and have it as an additional prize for that day. A large crowd should be brought to the store in this way, and some booklet, puzzle or other printed matter of special interest to children should be distributed to each visitor, as this is an especially opportune time to get advertising matter into the home.

Little accommodations always help to make the store popular. One dealer has a dozen card punches which he keeps especially to loan to ladies giving card parties. No charge is made. Another dealer has an elaborate baby scales which he loans happy parents upon request. Magazines make an excellent premium. Almost everyone is interested in magazines, and they are inexpensive, the wholesale price on many of the best publications not being over eighty cents a year. A coupon can be given with every ten-cent value purchased, and for say two-hundred coupons give a year's subscription. A particularly good feature about magazines as premiums is that they keep coming as a reminder every month for a year, and toward the end of the year people are likely to make plans to trade with you again so as to get a renewal without cost.

Whatever plans and schemes I used I would always keep well in mind the fact that a love for taking a chance is inherent in all human nature. This gaming spirit, while it takes on various forms in different people, is always present to some extent. Even if they don't "play the ponies" or frequent gambling houses, people like to speculate as to how things are going to turn out. They like to draw a prize now and then, or come close. But when they don't win you must see to it that they don't lose. That's why merchandise of uncertain value should always be avoided. The merchant who successfully apeals to these elements in human nature is the one with whom customers are eager to spend their money.

MECHANICAL HOLIDAY WINDOWS.

Dakin Bros, Digby, N.S., used two mechanical displays in their windows a year ago, and found that they interested many people in the goods displayed.

In one window they used a toboggan slide scene, in which a cardboard toboggan containing a child was continually sliding down the incline, a small water motor under the window being attached to a canvas belt, carrying the toboggan, and revolving on tins. A street scene beyond the slide gave a realistic effect to the display, but the window would have been much improved, if a background had completely hidden the store, and stands had been arranged in the corners, displaying gift silverware, cutlery, etc., properly price marked.

The second window contained a Ferris wheel made of galvanized iron and revolving on a stove rod. Six cars, carrying passengers revolved with the wheel, power being supplied by the water motor, the speed being cut down by a double pulley operating large and small on the one axle. This display was more distinct from the store, but the arrangement of the goods could have been made more effective by raising them above the floor of the window. The pedestals shown were made of tin and price tickets were used liberally.

News of the Retail Hardware Associations

Hardware Exhibition at London Convention an Assured Success—Only Three Spaces in Exhibit Hall not Disposed of and Convention not to be Held for Three Months — A "Model Store" Likely to be a Feature—Winnipeg Retailers not Supporting Their Association.

Canadian Wholesale Hardware Association—William Starke, Montreal, president: S. H. Alexander, Hamilton; W. J. Lawson, S. R. Kennedy, Toronto, A. Jeannotte, Montreal; A. Prudholme, Montreal; Joseph Lemieux, Quebec; directors; James Hardy, Toronto, secretary-treasurer.

Maritime Wholesale Hardware Association—W. S. Fisher, St. John, president; Percy Simmons, Halifax, vice-president; F. R. Murray, St. John, secretary. treasurer.

St. John Hardware Merchants' Association—John A. McAvity, president; W. S. Clark, secretary.

British Columbia Hardware Dealers' Association.—W. C. Stearman Vancouver, president; H. T. Kirk, New Westminster, vice-president; G. Blakely, New Westminster, H. Martin, Vancouver, and W. R. Owens, Vancouver, executive committee; Wm. J. Butt, Vancouver, secretary-treasurer.

Hardware and Metal Association of British Columbia.—John Boyd, Vancouver, president; J. A. Cunningham, New Westminster, vice-president; John Burns, Vancouver, secretary-treasurer.

Alberta Hardware Merchants' Association.—John Drewe, Calgary, president; R. L. Gaetz, Red Deer, first vice-president; J. Dowcett. Edmonton, second vice-president; L. W. Kribs, Frank; C. W. Marshall, Nanton; W. G. Stafford, Lethbridge; A. E. Clemens, Sedgwick, and C. W. Hislop, Carstairs, executive committee; A. T. Linton, Calgary, secretary-treasurer.

Winnipeg Retail Hardware Association.—Charles Mulvey, Winnipeg, chairman; J. E. McRobie, Winnipeg, secretary-treasurer.

Ontario Retail Hardware and Stove Dealers. Association.—D. Brocklebank, Arthur, president; A. Ballantyne, Brantford, first vice-president; M. S. Madole, Napanee, second vice-president; John Caslor, Toronto, treasurer; J. Walton Peart, St. Mary's; D. Cinnamon, Lindsay; R. C. Chown, Belleville; H. P. Morgan, Peterboro; J. S. Weichel, Elmira, and J. R. Hambly, Barrie, executive committee; Weston Wrigley, 10 Front St. East, Toronto, secretary.

Toronto Retail Hardware Association—Samuel Pearsall, president; Joseph Harding, secretary.

Ottawa Retail Hardware Association—R. Mulhall, president; J. G. Cowan, secretary.

LONDON CONVENTION EXHIBITORS.

That the trade exhibition held in connection with the Retail Hardware Association convention at Hamilton last February was a popular innovation is evidenced by the demand for space in the Exhibition Hall at the fifth annual convention to be held at London on February 8, 9, 10, and 11, 1910.

Early in October last year's exhibitors were given an opportunity of booking space at the 1910 convention, and eighteen manufacturing firms responded favorably. Then following the executive meeting on Thanksgiving Day a report was published in Hardware and Metal and seven more firms applied for space, those having secured reservations to date being as follows:

Burrow, Stewart & Milne, Hamilton; Thos. Bryan, Ltd., London; Pittsburg Perfect Fence Co., Hamilton; Oneida Community, Niagara Falls (two spaces); Brandram Henderson Co., Montreal; Dowswell Manufacturing Co., Montreal; Gendron Manufacturing Co., Toronto; Wood Specialty Co., St. Mary's; Canada Paint Co., Montreal; Johns Manville Co., Toronto; Metal Shingle & Siding Co., Preston (two spaces); Sherwin-Williams Co., Montreal; Gillette Safety Razor Co., Montreal; Bowser Oil Tank Co., Toronto; Metallic Roofing Co., Toronto; F. W. Bird & Co., Hamilton; Taylor-Forbes Co., Guelph (three spaces); Carborundum Co., Niagara Falls; Standard Paint Co., Montreal; Lufkin Rule Co., Windsor; Brantford Roofing Co., Brantford; Gurney-Tilden Co., Hamilton; Supreme Heating Co., Welland; D. Maxwell Co., St. Mary's; Moffat Stove Co., Weston; Imperial Varnish Co., Toronto.

Although no general announcement has been made 30 of the 33 spaces have been allotted and several firms have made applications for space, with no allotment yet made.

In addition to the exhibits in the City Hall auditorium, a "model hardware store" will probably be arranged in the arcade beneath the City Hall, one manufacturer having offered to erect a model store front.

A committee of London manufacturers and jobbers is being formed and a committee of the executive of the Retail Hardware Association will visit London next week to further the arrangements for the convention.

From present indications the gathering at London will eclipse any previous convention of retailers held in Canada, and that will be "going some" as the Hamilton convention last February set a record hard to equal or excel. Certainly no other class of retailers have any gatherings to compare in interest or attendance with the annual meetings of the Ontario Retail Hardware Association.

WINNIPEG HARDWAREMEN INACTIVE.

November 10.—In the light of present day facts, it is a matter of wonderment why the Winnipeg Retail Hardware Merchants' Association should show such extreme evidences of lethargy.

The universe is so constructed that every individual man has his own lot in life and his own obligation to fulfill. Personal assertiveness is demanded of everyone if he wishes to succeed in life, and if he is desirous of carrying to victory those issues which are thrust upon him. That which is true of an individual is also true of an organized body of men. The organization as such, is an individual personality, which has duties to perform, and the lack of assertiveness in the efforts to perform those duties betrays lack of personality and weakness of latent powers.

If there is any body that has obstacles to overcome, iniquities to put down, and a just cause to maintain, it is the Hardware Merchants' Association of Winnipeg. And to think of this body manifestly lying down in the harness, while all other bodies are active and wholesome, riding over perhaps those who refuse to put forth the feeblest effort to carry out those issues which are plainly their own.

The matter of seeking protection against the wholesalers who persisted in selling to consumers, and who have been during the past season handing out exorbitant promises to the retailer who called occasionally to set matters right, was discussed in a semi-serious vein at one or two meetings of the retailers, but no definite action was taken. At the meeting which was called last week to further discuss steps to remedy the serious situation, only three or four members put in an appearance, and nothing at all was discussed seriously. Manufacturers are organized, wholesalers are organized, and they are all alert and out for business. But the retailer is not, and he is being squeezed into insignificance and ruin, not because he has no cause to maintain, but because he will not organize to protect his own interests. L.C.H.

BENEFIT OF LOCAL ASSOCIATIONS.

J. H. Bradish, Batavia, N.Y., ex-president of the New York State Retail Hardware Association, in a recent address said:

"It was my privilege recently to attend a meeting and banquet given by the Buffalo Retail Hardware Merchants' Association, an organization which has a large membership and is doing effective work in its own field. It is my firm belief that too much cannot be said in favor of the formation of local organizations. They are not only a great benefit to their members, as the Buffalo dealers can testify, but they strengthen our State association.

"Even in villages where theire may not be more than three or four dealers, pleasant relations and complete understanding among those three or four are bound to result in substantial benefits to all concerned. It is simply a realization on a small scale of the value of concerted action. Consider your competitor in business as a friend instead of an enemy. Discuss with him matters of credits, collections and the reduction of operating expenses, and whenever possible, co-operate with him in buying. How much you will both benefit by such action you will soon realize, and it is likely to surprise you. I am speaking from experience regarding this matter. Competition which has as its sole object the destruction of the business life of your competitor is pretty sure to develop the characteristics of a boomerang."

About the best the man can do who tries to drown his sorrows is to make his head swim.

Splendid Stores in Southern Alberta City

Special Correspondent of Hardware and Metal Predicts a Great Future for Lethbridge—Destined to be Important Railway and Manufacturing Centre—Five Splendid Hardware Stores—Need of Retail Hardware Association in Alberta.

The same general optimism which pervades the hardware atmosphere throughout Southern Alberta, is intensified to a marked degree in this commercial centre. The Sun of Southern Alberta, of which we occasionally read, seems to have an expansive effect upon the descriptive faculties of the handwaremen of Lethbridge, and they grow eloquent, and glow with heat, as they describe the new city of 11,000 people, whose surrounding hills are lined with what apears to be an inexhaustable supply of the finest quality of bituminous coal, for both domestic and manufacturing purposes, and whose agricultural lands are producing more wheat and oats to the acre than any similar district on the face of the earth. Optimistic—how can they be otherwise? In addition to these natural sources of wealth, they say that the completion of the new million and a half dollar steel bridge, which is over a mile in length and 307 feet high, across the Old Man river, will make this line of the C. P. R. nearly two hundred miles shorter to the coast than the main line is, which taken together with the fact that the grade through the mountains is considerably less, gives double assurance that this line will be the road over which through traffic will be carried; thus adding to the importance of Lethbridge, as a divisional point and railway centre.

All of the reasons they give, and the arguments they produce to prove the truthfulness of their assertions, it is impossible to enumerate in an article for publication in a purely trade paper like Hardware and Metal, but in the meantime, building is very active, both in the city and surrounding country.

Five Hardware Stores.

The hardware business of Lethbridge is being attended to by five stores, as follows:—The Hick Hardware Co., C. W. Gray, Hayr Bros., McKeown Hardware Co., and The Stafford-Agnew Co.

Mr. Hick, the proprietor of The Hick Hardware Co. has the distinction of being the successor of the oldest hardware business in the city, which was established when Lethbridge was but a hamlet, by Stafford & Brody, later succeeded by McKeown & Hick. Mr. McKeown withdrawing, established the business of The McKeown Hardware Co., while Mr. Hick continued the original business. The store of The Hick Hardware Co. is situated on Redpath Street, facing the city park, which consists of four blocks, given to the city for park and recreation purposes by Mr. Galt, after whom the famous Galt mines take their name. Their store is well stocked with general hardware, stoves, etc., and in addition they do a plumbing and steam-fitting business.

Made Money in Real Estate.

C. W. Gray had the fortune of coming to Lethbridge, from Calgary, while the former city was but an infant. He therefore got in on the ground floor, and has not only succeeded in building up an immense hardware trade, but by wise buying of Lethbridge dirt, has become one of the city's wealthy men. His store is situated on Round Street, in the centre of the best retail section, and is heavily stocked with all lines of general hardware, stoves, house-furnishing goods, etc. Mr. Gray is a very genial gentleman to meet, and impresses one with the fact that his success has not, as is too often

Stafford-Agnew Co.'s Store, Lethbridge.

the case, given him the icy heart, nor interferred with his glad hand.

Ironmongers Become Hardwaremen.

Hayr Bros., whose store is also on Redpath Street, came here two years ago from "Across the pond," buying the Vrooman stock, an intimation having reached them, before leaving England that it could be bought, and they decided at once to direct their steps towards Lethbridge, purchasing the business immediately upon their arrival, and subsequent results have demonstrated the wisdom of their action. Both of these gentlemen, went through the accustomed trying but thorough ordeal of serving a five years apprenticeship with "iron mongers" in the old land, and this training served well as a substantial foundation upon which to rear the superstructure of successful Canadian hardwaremen.

Arthur Hayr has removed all doubt as to his being thoroughly Canadianized by recently leading to the altar one of Canada's fair daughters. Mr. and Mrs. Hayr have just returned from their honeymoon. Mr. Hayr taking advantage while passing through Winnipeg, of meeting for the first time some of the jobbers from whom the firm have been buying, and he is loud in his praise of the treatment received at their hands. This firm like those previously referred to carry a heavy stock, in fact, this seems characteristic of the Lethbridge hardware stores. Their business has more than doubled since they began and is still on the increase.

Traveler Becomes Retailer.

A. H. McKeown is president and C. F. Smith, the secretary of The McKeown Hardware Co., who commenced their present business about a year and a half ago; opening up in a new brick store on the corner of Round and Dufferin Streets. They were unfortunate in having their entire stock destroyed by fire last June, which interferred very considerably with their business, but a careful examination of their well-kept store at this time, would not disclose the fact that they had so recently met with such a disaster. They carry a fine, well assorted stock of general hardware, stoves, etc., in their well arranged, finely lighted store, while their basement is filled to overflowing with surplus stock and heavy goods. Mr. McKeown formerly represented The McClary Mfg. Co., on the road in this territory, and since commencing the present business, has obtained such a hold upon the trade that the firm's business has doubled in the past year.

Stafford-Agnew's Fine Store.

The Stafford-Agnew Co. are the baby hardware establishment of the city, but are fast developing into a mighty vigorous youngster. They began business in December, 1908, opening up in the Stafford block on Round Street, the block, a two-storey and basement, solid brick, fireproof building, containing two stores, being owned by Mr. Stafford, who has also been one of the fortunate ones, in buying Lethbridge property when it was cheap, and in consequence is now on easy street. As previously stated, Mr. Stafford was one of the pioneer hardware men of the village of Lethbridge, while Mr. Agnew formerly sold "nails and things," for the J. H. Ashdown Co., of Winnipeg, afterwards traveling in Mininesota for Farwell, Oznum, Kirk & Co., the big St. Paul jobbers, and finally covering the Canadian west for The Crane Co., Chicago. The triple experience gained by Mr. Agnew fits him admirably for his future career, as a successful retail hardwareman.

The store occupied by this firm is 25 by 85 feet with full basement. The store is fitted with the Walker-Bin Co.'s fixtures, in oak. In the hardware section the goods are placed on the shelves in the original packages, the firm prefering this to either glass front or wood front boxes. Doors the full height of the shelving occupied by the retail stock and about thirty inches in width, then cover up the shelving, keeping the stock free from dirt and dust, while samples of the stock are fastened securely to the

doors. Surplus stock in original packages is kept in the shelving above the doors, the shelving reaching to the ceiling.

System in Stock Keeping.

Let me mention one feature in the arrangement of this firm's stock, which attracted my attention, and which I found upon observation, and enquiry from Mr. Agnew, was carried out throughout the entire stock, that of always placing the smallest size or the lowest number at the left. This is a system which the writer himself followed for many years in the retail hardware business, and somehow, perhaps wrongly, but nevertheless surely, one who is accustomed to that arrangement, immediately notices, and when it is not followed, discounts the ability of the stockkeeper. For instance a box containing ⅜ No. 2 screws should always be placed to the left of a box containing ⅜ No. 3 screws; and a can containing paint No. 50 should be placed to the left of a can of No. 60.

The office is situated on one side about "mid-ships," while Mr. Agnew's desk is near the front door, where he can meet the firm's customers personally and see that they are promptly and satisfactorily served, his especial care being this department, Mr. Stafford looking after the buying, and the financial end.

Original Features of Store.

A number of original ideas are in use for the display and quick handling of goods.

A gun case arranged to show the side of the gun instead of the top, as is usual, is considered an advantage.

A hoist from the basement to the ground floor in one of the back corners, where a door opens into the alley enables the unloading of goods directly from wagon to hoist and vice versa.

A colored eight-candle electric bulb situated in a conspicuous place on the outside of the office, connected with the switch that operates the basement lights, serves to show whether or not the lights in the basement are on, without going down, and saves many steps.

The firm carry an exceptionally heavy and well assorted stock of hardware, both shelf and heavy, and the whole establishment from office to basement shows it to be well and carefully arranged. The firm's sales have exceeded their most sanguine expectations and keep on gaining every month.

Need of Trade Organization.

All of the Lethbridge hardwaremen interviewed are loyal supporters of Hardware and Metal, and express themselves as looking forward eagerly for its weekly visits.

They likewise have opinions on the value of organization, and admit that certain abuses exist among them, which a Provincial Association might correct, but this subject may be referred to in a later letter. H. N. J.

Lethbridge, Oct. 29, 1909.

Business Methods of Canadian Hardwaremen

Price Cutting Experiences of an Ottawa Hardwareman — Victoria Clerk Suggests a Good Idea to Help in Overcoming the Prejudice Against Giving Edged Articles as Gifts.

A CUTLERY SELLING HELP.

Victoria, B.C., November 6. — As cutlery dealers and hardware men know to their cost, there is an old superstition that it is unlucky to give any thing that has an edge, or that cuts, as a present to any friend or loved one. Many schemes have been devised to overcome this ancient usage, such as giving anything from one cent to five for the article, thus buying it from the giver.

A clerk selling cutlery or edged tools during the holiday trade is often at a loss what to suggest when up against this proposition, and often a sale is lost through it.

The best way to overcome this difficulty is to suggest to the customer that he write on the card along with the usual Christmas greetings the words "Not given, leased for 99 years." This is all that is necessary, the novelty of the idea does the rest, and the sale is made.

W. B. C.

PRICE CUTTING AN EVIL.

Ottawa, November 10.—Anent the address delivered by R. E. Shanahan, treasurer Bissel Carpet Sweeper Co., at the Atlantic City Convention of the U.S. Jobbers and Manufacturers, an incident recently related by a local hardware merchant seems appropriate.

"I've just lost a customer" said he. "She wanted me to cut the price of that tray and I refused. Not long ago I gave her a refrigerator at a considerable reduction simply to clear out the stock to make room for more seasonable goods, and she said she thought she could make a sale of another one for me. I warned her against quoting the price I had made her, but in spite of this she informed her friend that a refrigerator could be bought from me at such and such a price. It made me mad and when she asked for another cut, I decided then and there to change price for no one. If you cut on one article, the purchaser expects the same treatment thereafter on everything else and I am sick of it. From this out they will pay the price or leave it. I mark my goods at a reasonable profit and am going to have it."

These were the words uttered by a gentleman who possesses the trade of the best citizens. And what a great truth there is in them. If an article is worth the price asked, why alter that price. Such action immediately affects the value of it in the mind of the buyer, and as this merchant states, leads to expectations for further reductions on purchases.

Not only this but such an action is not fair to other customers. "One price to all" is the only motto which will insure general satisfaction. Any deviation therefrom will surely result in injury.

The other day the same merchant remarked about a man coming in for a brace and bit and upon being told the price said he could get it at another store for so much, but would rather buy it at this store for the same money. He was informed that the price quoted was the only price acceptable.

Set a price and stick to it. If you think the article is worth it, inculcate it in your clerks and let them in turn impress it upon the buyer. There's a great deal in the way a salesman expresses himself. His sincerity can very readily be observed, and so with his insincerity.

Price the goods at a fair profit and maintain that price through all conditions. It will pay in the long run.

G. E. M. H.

A MODEL BATHROOM.

Chatham, November 9.—A good help in the plumbing business is a model bathroom shown in the store of J. C. Wanless. The bathroom occupies a small corner in the rear of the store, adjoining the office.

The floor space used is about the usual bathroom size, and is fenced on the two otherwise open sides by an iron railing. A ceiling has been put in at a height of about 6 feet from the floor, and covering the entire bathroom space, thus heightening the illusion of a bathroom.

The two walls and ceiling of this model bathroom are covered with metallic siding, thus emphasizing the value of this material for bathroom walls and ceilings. The floor is covered with linoleum, which served to attract attention to another item in proper bathroom equipment.

The bathroom itself is completely fitted out, having a large bath tub of the most approved pattern, a corner wash bowl, side wall wash bowl, sanitary appliances, etc. So complete is the equipment that the towel rack and soap dish, attached to the wall above the corner wash bowl, are both in place. There are no water connections, which is the only way in which the model differs from the actual bathroom.

It has been mentioned that a ceiling has been put in some 6 feet from the floor, for the bathroom. About 5 feet intervene between this ceiling and the actual ceiling of the store, so that on top this bathroom ceiling means a little addition to the floor space of the store. Here are kept oil barrels. They are shut off from general view on the side, however, by four rows of shelving, which also adds quite a bit to the shelving accommodation of the store. V. L.

Preparing for the Sporting Goods Winter Trade

Have Stocks Ready to Supply the Demand When it comes—Salesmen Should Study the Goods They Sell—Effective Design for Window Display—Gymnasium Supplies a Profitable Line to Push.

Merchants who have not placed their orders with the jobbers for skates, hockey sticks, gloves, guards, pucks, toboggans, sleighs, etc., should lose no time as the season is drawing rapidly near, and it is fatal to face the rush with badly assorted stocks. The value of not only being ready for the first customer, but encouraging the consumption by early displays is so apparent on the surface that it would seem impossible for a business man ever to fail to recognize the fact, and yet there are too many cases of the dealer being caught napping not only in his sporting goods but in other departments. Take time by the forelock is a motto that should be hung on every dealer's desk. It is the first element of success.

The holiday trade, too, will soon be upon the merchant. Is he prepared for it? Has he mapped out a plan of proceedings? Has he designed a few good windows that will whet the appetite of the spectators, and make the buying of the skate precede the frost, rather than the frost precede the skate. The holiday spirit will shortly be actuating the community. Buyers will be thronging the streets with monew to burn. If the merchant does not get his share then it is because he has not baited his hook properly. He has failed in his announcements, in his window displays, and in his general preparations for the great event.

Know the Goods.

In the selling of skates, hockey sticks, etc., it is important that the salesman should know something about the articles he is selling. The embryo salesman will say, "what is there to talk about in these articles?" but his more experienced confrere can soon give him a few pointers. There is the question of lightness, of strength, of speed, of peculiarities of construction, of grinding, etc. If a salesman is well posed up in these points, if he can point out to the undecided customer who wants a certain kind of skate why one will suit his purpose better than another then so much sooner is the sale completed, while the buyer is impressed with the knowledge possessed by the salesman—a very valuable advertisement to the store. A sportsman likes to have an opinion other than his own to go upon, and if the salesman can speak as one having authority it is appreciated by the former. Show the customer that an interest is taken in his purchase, that the merchant wants so to fit him out, whether it be skates, toboggans, hockey sticks, snowshoes, or skis that there shall be no dissatisfaction afterwards—in fact, display a paternal care that the customer's money is not wasted.

Good Window Display.

Good window displays at all times are imperative, and in the case of sporting goods the fact is even more insistent. Unlike many other articles sold by the hardwareman, sporting goods are not necessities, and therefore there is need of a greater call upon those factors by which trade can be encouraged. And there is nothing like a good window display to stimulate the desire for possession on the part of the spectator. Sporting goods displays possess this one great advantage that they lend themselves to effect, and it must be a very slow merchant or clerk, who cannot suggest some idea that will cause attraction.

Winter scenes are easily fixed up. For instance the following idea will show how effectively skates can be displayed. A sheet of bright pipe tin, with asbestos cement all around the edges to represent snow, place assorted sizes and designs of skates, taking care not to crowd the display. In the background make hills of cotton with small trees, and a good display is made at a small cost. This design can of course be elaborated. An open air rink can be depicted with the same material, while with an imitation fire and a hut, seats and refreshment booth, the realism can be increased. Do not wait, however, for the frost and snow to come before any display is made. Be in advance of the season, and the effect is more pronounced while the customer also is enabled to make up his mind as to the store he will visit when he wants his skates instead of running into the nearest place on the day he decides to go skating.

Interest the Clerks.

And in considering the window displays the dealer should interest his salesmen in them, and call upon them for designs and encourage them to plan and scheme. Good ideas often come from quite unexpected quarters. What is displayed in the windows represents what is sold over the counters. The people who are connected with the one are concerned in a very material way with the other. Then, there is a sympathetic connection between the two that should not be disregarded. When salesmen see a really effective display in the windows of the store in which they serve, they are at once flattered and strengthened. If they have been consulted, no matter in how slight a way, they feel in a manner that it is somehow up to them to make good. It is universally admitted that a salesman is always at his best when he thoroughly believes in, and is enthusiastic over, the article he sells. Men who are invited to assist in working up the window displays are more apt to develop this feature than their colleagues who are left to attend exclusively to the counter side of salesmanship. All helpers should be stimulated, and kept in heart, as far as practicable.

Carry Gymnastic Goods.

With the development of gymnasiums and indoor athletic clubs, there is a good field for dealers to exploit. Among the most popular goods to carry, and easiest to be placed, may be mentioned striking bags, boxing gloves, dumb bells, Indian clubs, exercisers, rowing machines, etc. All these can be had at extremely moderate prices. Even a good, practicable rowing machine, the most expensive item on the list here given, can be obtained for a few dollars. With the striking bag goes the disk. This costs but little, can be quickly put up and taken down, and requires but small space. The same remarks apply to that other popular and useful article, the exerciser. It comes in a box with charts and hooks for fixing, and the cables can be had light, medium or stout to meet all requirements; from those of the slim youth to those of the regular athelete. Then, there are gymnasium suits that are in constant request. Among other goods that there should be a call for may be mentioned gymnasium board, trapeze, swinging rings, horizontal bar, parallel bars. The apparatus for a small gymnasium, such as every live village should have, can be installed at quite a moderate outlay. There are doubtless thousands of homes, scattered all over the country, where similar outfits could be placed once a demand was created. The gymnasium cult, both institutional and at home, is worth fostering. The dealer who takes it up in a systematic way has a reasonable assurance of having the community behind him. It is good advertising in any case, and should bring money both directly and indirectly.

TRAP WINDOW DISPLAY

As a suggestion for a trap window display, the Oneida Community, Oneida, N. Y., suggest the following: Halter chains are fastened together and hung four or five feet above and across bed of window. On these are suspended assorted sizes and brands of traps you have in stock. A few cat-tails or rushes are arranged in bunches, tacked against the sash, and a tree or two placed at sides against the wall. Make the base of window uneven with crumpled soft paper, shavings or sawdust, so as to give a rough surface when completed. The rear of the window should be 6 to 10 inches higher than the front. At the side a small case is built out and covered with cotton batting to represent a miniature hill. Dirt and dead grass, or rushes, are glued to the inside of the stovepipe and inserted in the side of the miniature hill to give the appearance of a muskrat hole. In the front of the

window lay bright tin and cover with rough glass to represent ice. However, if this is not convenient, a large mirror or plain window glass (with tin underneath), treated to a saturated solution of Epsom Salts and vinegar will answer the purpose. This solution will crystallize in drying, giving a frosted effect. In the rear of the window make a fence corner from a post 3 x 3 inches, about 3½ feet high, and rough boards or box stuff about 4 inches wide and long enough to be in proportion to the rest of the window. These are stained dark to present a weathered appearance, and the boards lettered in white giving current fur prices, which you will find on one of the display cards sent under sparate cover. Cover the side, back and surface of the window with cotton batting and fasten small spruce, cedar, or any evergreen trees at back and side, placing a few broken twigs around on the surface. Place a small log and two of three stones in front of fence, covering the top lightly with cotton batting. This should also be done to the fence boards and post. Make a trail of sand or earth from the muskrat hole to the edge of the ice. Place a mounted squirrel in one of the trees and a muskrat or coon on the log. Sprinkle diamond dust over all to represent frost, and place display cards where they will show to best advantage.

NEW MARLIN SHOTGUN.

One of the most interesting gun items of the trade from the dealer's viewpoint, is the new Marlin repeating shotgun, Model 26. It is made in three styles: For trap shooting, the brush gun and the riot gun. It is a 12 gauge repeater, with the solid top frame, side ejector and closed-in breechbolt. The gun lists at $21, and can be retailed at $19.50. with an excellent profit for the dealer.

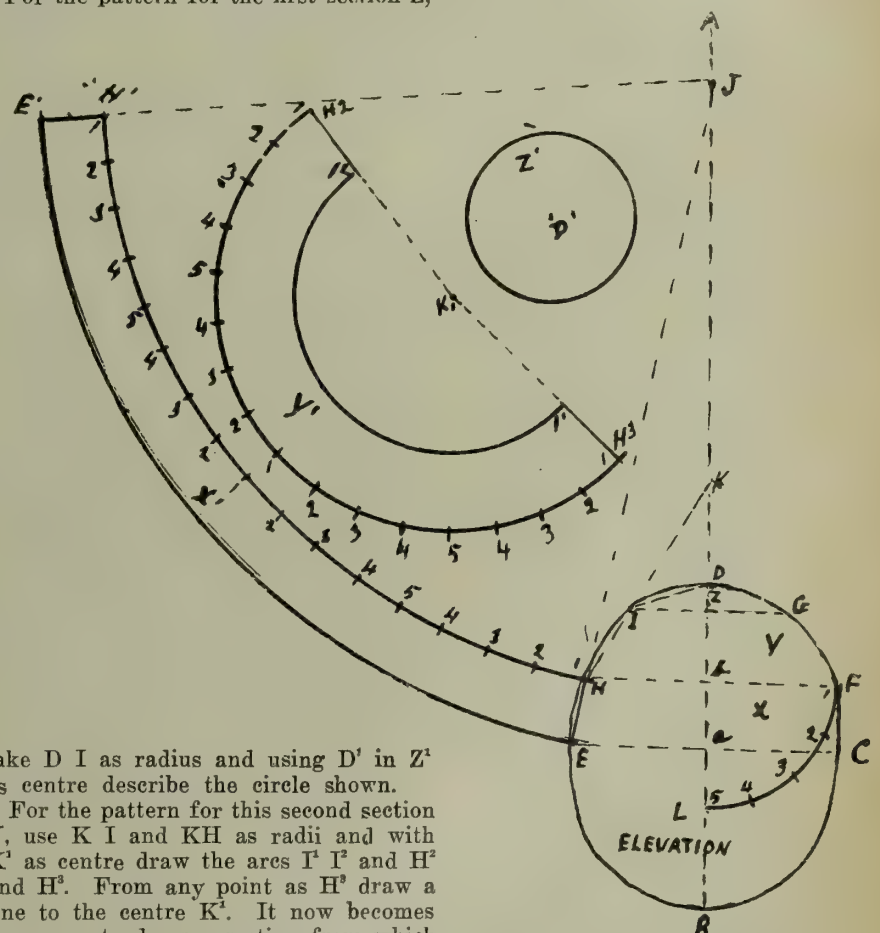
DON'T GET COLD FEET.

Many cold winter months are coming and it will be necessary to find means by which to keep warm when riding in carriages, buggies or sleighs. The old method of using bricks for this purpose has become obsolete because they do not retain the heat for any considerable distance and are therefore very unsatisfactory. Cases may be mentioned where women though wrapped up as much as possible, became so chilled when driving as to contract diseases from which they died.

The Chicago Flexible Shaft Company, makes a heater which consists of twelve cakes of carbon which burn without flame, smoke or smell, thus rendering the apparatus safe. It is small, being only a foot long, and is practicably indestructible as it is made of strong metal. These heaters are useful novelties and merchants who sell them not only directly add to their incomes, but generate a friendly feeling on the part of customers.

Cutting Patterns in the Tin Shop

Readers of Hardware and Metal are Requested to Make Use of this Department—Questions Regarding Patterns Will be Answered by Experts—Discussion is Also Invited on Any Matter pertaining to the Tin Shop.



To describe a pattern for a sphere or ball, which is to be constructed of horizontal sections. First draw the line A B on which, using A as centre, describe the elevation of the sphere B C D E. Divide the quarter-circle D C into as many spaces as the sphere is to have sections as shown by C F G D. From these points draw horizontal lines through the elevation as shown by C E F H and G I. Now from the extreme points as E. H, H I and I D draw lines intersecting the centre line B A at J K and D.

For the pattern for the first section Z, take D I as radius and using D' in Z^1 as centre describe the circle shown.

For the pattern for this second section Y, use K I and KH as radii and with K^1 as centre draw the arcs I^1 I^2 and H^2 and H^3. From any point as H^3 draw a line to the centre K^1. It now becomes necessary to draw a section from which the true length of the pattern can be obtained. Therefore with B F as radius describe the quarter circle F L and divide it into equal spaces as shown by figures 1-5. Let the dividers be equal to one of these spaces and starting at H^3 on the outer arc in Y mark off four times the amount contained in the quarter section F L, as shown, from 1 to 5 to 1 to 5 to I in Y^1. From H^2 draw a line to K^1. Then will H^2 I^2 I^1 H^3 be the pattern for the section Y in elevation.

For the pattern for the third section, use J as centre and with radii equal to E E^1. Now set your dividers equal to one of the equal spaces in F L and starting from H set off four times the amount of L F, as shown, from 1 to 5 to 1 to 5 to 1 on the inner curve H H^1. From to K^1. Then will H^2 I^2 I^1 H^3 be the J H and J E draw the arcs H H^1 and the apex J through H^1 draw a line intersecting the outer curve at E^1. E E^1 H^1 H shows the pattern for the centre section.

It will be noticed in the pattern X^1 we space off on the inner curve, while in the pattern Y^1 we space off on the outer curve. These two curves must contain the same amount of material as they join together when the ball is raised.

Pattern for a Sphere.

This will form the pattern for sections of one half the sphere. The other half is obtained in similar manner.

Edges must be allowed.

W. M. M.

The first regular train service was inaugurated on October 14 on the Hudson's Bay line of the C.N.R. This service will be weekly from Hudson's Bay Junction to the Pas Mission, the present end of the steel, which is 90 miles north of Prince Albert.

PUBLISHED EVERY SATURDAY.

MAKE YOUR COLLECTIONS NOW.

This year's harvest has been a bountiful one. The farmers have money, and that means that there is money in circulation through all the channels of business.

Now is the time for the merchant to collect what is due for merchandise supplied on account. There are many demands upon the farmer and the laborer for his money after the harvest and if the merchant is to secure what is rightfully due him he must go after his money and see that he gets it.

Every merchant should get his credit accounts checked and posted up to date without delay. If he has notes on account due, he should present them for payment and insist upon a settlement. If he has merely outstanding credit accounts on his books, now is the time for him to see that his collections are made.

KEEPING HOLIDAY TRADE AT HOME.

It is the problem of the business interests of every small town to keep trade at home. This is true at all times of the year, but particularly so in the holiday buying season when shoppers are looking for Christmas gifts.

There is a large percentage of the cheaper class of trade that can be kept at home, but those why buy the better class of goods are not content, oftimes, to shop in the small town but make trips to nearby cities where stores are larger and stocks more extensive.

Merchants in the smaller towns can keep some of this trade at home, by stocking with a better class of goods, doing more advertising and assuring customers that they can obtain just as good goods and better values by shopping at home. Many people must be "shown" and the merchant must do this, first, by having the right kind of goods, and, second, by advertising the fact.

Holiday trade is well worth striving for, and the merchants of every live town should get together and adopt some plan for advertising their own town to their own people, to keep them at home during the Christmas shopping days.

A plan suggested by the Hardware Trade, that might be feasible is for a number of the leading merchants in a town to unite in the publication of a circular enumerating some of the better things in merchandise that can be obtained right at home. Further than this the merchants must make their stores attractive, must decorate their show windows and do all of the advertising that they can afford.

TAKE TIME TO READ.

"I have no time to read." This is an expression familiar to trade paper canvassers, and if it were as well understood by those who make use of it, as it is by canvassers it would not so frequently be expressed. Instead of being an excuse for not subscribing for a paper that will benefit the merchant, it is an admission of neglect to do what every business man is expected to do.

Trade papers are busily engaged in searching for new and progressive ideas, and are bringing the best that can be found to the attention of their readers who are continually making use of them.

A young man recently bought a business of which he has little knowledge. He has not the least inclination to read and therefore has little chance to learn. He is consequently not making headway and cannot understand what is the matter.

Another young man started under similar conditions, but he caught on to the idea that knowledge is the source of success. He devotes certain hours every week to the reading of trade literature, and he claims that his success, to a large extent, is due to the valuable information he obtains in that way. If a man has no taste for reading he should cultivate it ; in fact should make himself read, and he will soon acquire a habit that will be beneficial to him. The man who does not read must not forget that others read him, and they soon find out that he is narrow in his views and selfish in his dealings.

It is time well spent for a merchant to look at other stores in order to get improved ideas, but what is that compared with the knowledge he can gather from his trade paper, which is on the lookout for the best systems and methods all over the world, and which are gathered up and brought right to his counter every week for his own benefit and at his leisure.

No time to read! A merchant might as well say that he had no time to eat.

SELL WHOLE-HEARTEDLY.

Do you really believe that you pay sufficient attention to the art of salesmanship in your daily transactions ?

Too many merchants take it for granted that their customers come into the store to purchase certain things, and when supplied with those articles or their equivalent, there is no necessity for any further effort to sell some other commodity.

A writer who takes a keen interest in the art of salesmanship as practised by the retail merchants, states in an exchange, that he has been making trips to various stores in his home city recently, buying small articles, one at a place, solely for the purpose of studying the methods of salesmen. They are pitifully wanting. In ten stores visited only one salesman made any real, whole-hearted effort to sell goods not asked for. We did not resist his blandishments, but bought several additional articles. By eight of the others the article requested was produced and wrapped up, the change given, and that ended the transaction. In the ninth the salesman inquired in a perfunctory manner, "Is there anything more ?" There is need for a stirring up in stores among the salesmen. This is not the way to make a record as a clerk, nor is it the way which leads to promotion and independence. Not one of the ten was rude or discourteous. Not one showed neglect. But only one made a real effort to interest the buyer in other goods. He did it in an intelligent manner.

REPORTS OF TRADE GATHERINGS.

During the holiday season many manufacturers and jobbers call their salesmen together for annual conferences and in addition to going over matters directly interesting only those connected with the staff, there are social and educational features at which points are brought out which are of value to the retail trade.

Recognizing this fact one large manufacturing concern invited Hardware and Metal to send a representative to some of the meetings of its staff of salesmen held last week, a report of which is given on another page.

Hardware and Metal is at the service of the trade and whenever similar gatherings are held in any part of Canada a member of the editorial staff will attend if notice is given of the meetings at which matters of general interest will be discussed.

MANUFACTURERS REPORT NO SCARCITY IN STOVES

A canvass of the stove manufacturers of Canada indicates that there is little reason to the cry of scarcity raised a week or so ago. It is true that stocks of some styles of stoves have been depleted, and there have been considerable delays experienced in making deliveries of these good to customers. In most cases, however, the delays reported, which gave rise to rumors of a shortage, are the result of late buying and the inability of the railroad companies to give prompt and satisfactory service at this season when every effort is being made to move grain out of the western provinces, and ship in as much merchandise as possible before the rivers freeze up and navigation closes.

The cry of a shortage first came from the United States, but an Ontario stove manufacturer, who has just returned from across the line, states that the situation there is similar to that existing in Canada—there has been a good normal trade, and the demand is expected to continue until after the holidays, but the manufacturers have forecasted the trade very well and will be well able to supply all the stocks required.

Another stove manufacturer, who returned to Toronto this week from the Pacific coast, states that the trade in the western provinces has been good, but not sufficient to empty the warehouses at the various shipping centres. The bulk of the western trade is over and there will be little difficulty in supplying future orders.

The following are a few extracts from letters received from the foundrymen in various parts of the country:

"Most of the Winnipeg firms were cramped slightly during the past month or more, but they have been able to take care of the trade. Merchants had stock left over from 1908 and they were not sure of the trade for 1909 until the crops were in. Then the harvest was so large and the price of wheat so high that the demand for a greater percentage of the best grade of goods has been particularly noticeable, and there has been a slight shortage in some quarters for the better class of goods. There has been delays in marketing shipments, but this does not indicate that the manufacturer is short of stock."

"So far as we are concerned, we have had a very good demand in stoves and ranges this fall. Considering the fact, however, that a number of the other manufacturers were shut down for a long period, the shortage has not been so great as we expected. We think our competitors have been able to fill their orders fairly well, as we have had no demand to speak of, outside of our regular customers. Stocks in the hands of the retail trade will be found to be very much reduced by the end of this month, and htey will carry very few over. The retail trade in Toronto and Montreal seems to be getting into the hands of the departmental stores and weekly-payment houses, to the prejudice of the regular hardware and tinsmith trade. This is one of the tendencies of the times which cannot be avoided. Difficulties, however, crop up, in consequence of their buying large quantities, and selling at very close margins."

"Our own stock is quite depleted and we are short in nearly all lines. Of course, this is attributable to our strike this summer, but also rises through the heavy demand in the country."

"We have had an exceptionally good demand this fall, and have been somewhat behind, but hope to be able to handle orders from now on as fast as they come in."

"We are experiencing a very good fall trade, but are not looking forward to any shortage, as we are getting over our rush. No doubt, with the cold weather, there will be a revival of the stove trade in Ontario. We are in a very fair position to take care of all the stove business expected. No doubt, some of the other stove foundries who have not been running steadily throughout the year, will not be able to fill all their orders."

"The demand for stoves and ranges is better than last year, but not at all equal to 1907, and cannot be considered heavy. Customers had considerable stock to begin with and we, therefore, think orders will not slack off as soon as usual, but will continue through December and January. We have been running steadily and have filled all orders so far, and notwithstanding the troubles with the molders, which has existed since last January, we think we will be able to supply all demands for the rest of the season with a fair degree of promptness. As to the demand from the west, we are not worrying and will give the preference to Ontario and eastern orders. The western business is unprofitable, owing to United States competition, against which there is no adequate protection. If the Government could be induced to put 10 per cent. extra duty on stoves we could double our output."

"In our opinion there should be no shortage of stoves this year. The big rush is now over, and while it is natural that the manufacturers' stocks should be pretty well depleted, the daily output of most of the factories should be equal to the demand for the balance of the season. The dealers, as a rule, of late years have not been placing their orders until the stove season is practically on, when all pour in their orders and want their goods at once. The manufacturers have the stock, but neither they nor the railways have the facilities to move in a day or two the goods that they should have been distributing to the trade two months earlier. These conditions give the trade the idea that there is a shortage of stoves, when the real fact of the case is that it is simply a congestion of business piled on to the manufacturers and railway companies, and brought about by the dealers not ordering their goods until the rush is on."

"We provided ourselves with a large stock, expecting a good rush this fall, and our expectations have been fulfilled up to the present. We expect to be able to fill all of our orders. However, this is the busiest season we have had for years. We expect that the demand will still increase, as our new lines, which you displayed in the Stove Number of Hardware and Metal, are taking well with the trade."

"The demand this year is considerably greater for goods than our estimates, consequently, it is not possible to fill orders with dispatch and there are many lines which it would not be possible for us to furnish for the balance of the year, owing to the increased business."

"Up to the present, we have experienced a large demand for stoves, ranges and heaters. Our stock is still very good and we do not expect to experience a shortage."

"As far as our observation goes, the manufacturers of stoves and ranges in the Maritime Provinces, ourselves included, have fairly large stocks on hand at the present time. The trade this season has not been particularly good, especially in heating stoves, which we attribute largely to the fact that the weather has been extremely warm for this time of year."

The statements made by the various manufacturers are conservative and good sense has been shown in giving a negative reply to the rumors of shortages in stock. To cry "wolf" when there is no wolf, would only react upon the trade and have a detrimental effect upon the ordering of goods next fall.

CANADIAN METAL MARKETS

See Itemized Market Quotations on Page 74.

MARKETS IN BRIEF.

Montreal.

Scrap Metal—Advance of $1 in wrought iron and steel.

Turpentine—Cut of 2c.

MONTREAL.

November 12.—Trade has been very good this week, and the rush usually existing at this time of the year owing to the close of navigation is very noticeable. The volume of business may decline after November, but if it continues at present strength will be exceedingly gratifying to the jobbers. Good consignments of galvanized sheets, black sheets, tin, copper, and spelter have been dispatched or are awaiting shipment, and the tone of the markets is very firm.

No change in prices is reported, although the greater strength in the primary markets in tin and copper has influenced local conditions, and jobbing prices on these metals may advance at any moment. Spelter is very firm, but the market has not advanced.

Customers are taking more interest in the market, and the better tone in copper should bring in a lot of inquiries. Stocks are light, and as soon as users fancy the market looks likely to soar at all they will be keener on their future requirements. The strong tone in iron and steel in the States continues to be reflected here, and Canadian furnaces and mills are not looking for orders.

Heavy consignments of imported pig are expected by the last boats, and ex-store prices will soon be in force. Bookings have been made for next spring delivery, but holders are not anxious to take contracts, as much higher markets are anticipated.

PIG IRON—The close of the import season so far as Montreal is concerned is near at hand, and ex-store prices will soon be ruling. Heavy consignments are expected by the last boats, especially for warehouse purposes. The market is firm. Canadian furnaces are still full up, and not anxious for orders. Prices keep around $20 for No. 2 foundry iron at foundry, and $20.50 for No. 1. New business has let up in the States, but the pressure of old orders is still very great and the furnaces and mills have more on their books than they can comfortably handle. We quote: Middlesboro No. 3, $19; Summerlee No. 2, $20.50; Cleveland, $19.75.

TIN — With good orders coming in there has been a healthy tone to the local tin market, and jobbing prices have been firm at 32½. Inquiries show that a good deal of interest is being taken in the market. Higher prices have been ruling in London, due in part to the better copper situation, but with the Banca sale this month tin is uncertain. Consumption keeps good in the States.

COPPER—Jobbing prices are firm at 14c, and with the better tone in the primary markets an advance seems likely. The demand has been active, and with little stocks held, the situation is very healthy. The stronger tone in the primary markets, noticed in our issue last week, continues, and copper is over ¼c higher. The English market seems to have become speculative over conditions in the States, and the heavier buying in London in turn aroused excitement in New York with the result that consumers were more interested again, and the inquiry for copper became more decided in tone. Rumors of impending large consuming orders are circulating. Talk of consolidation and combination in the producing trade is responsible for much of the improved feeling.

SPELTER — Spelter is unchanged in price, but very firm. Heavy consignments have gone by boat, and the larger galvanizing interests are still buying well. Spring delivery in galvanized sheets have been contracted for. The St. Louis market remains at a high figure, and there is no recession in English prices. There has been some importation of foreign spelter into the American field which is causing much discussion, as the home price is still below imported figures.

LEAD—Lead is unchanged at $3.60 with Trail $3.50. The market has shown better buying in common with the other metals. The English market has been weak again, and fell below the £13 mark, the first time since September.

SCRAP MARKET — There has been a considerable movement to the States in wrought iron and steel where higher prices have been ruling than here. Consequently prices in wrought iron and miscellaneous steel have been marked up $1. There has been a good demand for cast scrap from Ontario probably to fill the gap caused by the movement into the States. There has been a good local inquiry for zinc, but the other lines have been quiet. We quote: Heavy copper and wire, 11c; light copper bottoms, 10c heavy red brass, 10c; heavy yellow brass, 8c; light brass, 6¼c; tea lead, 2¼c; heavy lead, 2¾c; scrap zinc, 3c; No. 1 wrought iron, 12c; machinery cast scrap, No. 1, $14; stove plate, $12; Malleable, $9; miscellaneous steel, $7.

TORONTO.

November 12.—Iron and steel continue to be the most interesting metals, though copper-buying has been good all week. There is not a single change recorded in any quotations, and the market is firm. Trading on the whole while it might show more improvement is fair, buying being quite steady.

The steel industry is active, as good as at any former period. Railways are buying more freely for new work and extensions, and the growth of traffic has helped on the building of rolling stock. Structural beams, too, are active, the large number of new buildings going up in the larger centres being at the record mark.

PIG IRON—The situation is unchanged. Booking for 1910 continues. Dealers are satisfied to put off delivery of supplies as stocks are low, and it is difficult to obtain any quantity for immediate use. All Canadian prices are firm, and domestic producers are loaded up with orders. No. 2 Canadian foundry is still quoted at $22 f.o.b., Toronto. The local prices for imported iron are: Clarence and Middlesboro No. 3, $21; Summerlee, No. 2, $23; and No. 1 Cleveland, $21.75.

COPPER—The passing week is one of the best buying weeks copper has seen for months. The market is firm, though with the large stocks on hand there has been no advance. Outside markets report a slight tightening. Local quotations remain at 14c and 14½c for lake and casting ingots.

SPELTER—Very firm and active is spelter, which is not a new condition for this metal, as it has been one of the steadiest since the opening of the year. The higher quotation of last week holds. Hundred pound lots are at $6. Sheet zinc ranges from $6.75 to $7.

SHEETS AND PLATES—Stocks are getting light again. Sales this fall have been enormous, and even yet trade holds good. The market is firm, with unchanged prices ruling.

LEAD—Rather erratic trading is going on outside, but locally conditions and prices are unchanged from last week. Buying continues in small orders as the metal is wanted for immediate use. Stocks are large. Imported and domestic are at $3.65 and $3.55 respectively.

TIN—Quiet trading is being done. The market is still firm, and the quotation of last week, 32½c, continues to rule.

OLD MATERIALS—There is a further strengthening to old metals due to higher prices asked and offered outside. Dealers in Toronto have not altered their offerings, however. For heavy copper wire 11¼c is offered; for copper bottoms, 10½c; heavy red brass, 10¼c; heavy yellow brass, 8¾c; light brass, 6½c; tea lead, 2½c; heavy lead, 3c; scrap zinc, 3¾c; No. 1 wrought iron, $11; machinery cast scrap, No. 1, $15 to $16; stove plate, $13; malleable and steel, $8; old rubber, 9c.

COKE OVENS AT THE SOO.

A contract for the erection of a coke oven plant, to cost $200,000, is reported to be about completed by L. N. Willputte, chief engineer of the Kopper Coke Oven Co., with the Lake Superior Corporation at the Soo. The plant will be operated in conjunction with the steel mill. General manager, W. C. Franz of the Lake Superior Corporation confirmed the report.

HARDWARE MARKETS

MONTREAL.

November 12.—Orders are coming in steadily for general assorted lines. The movement perhaps is not quite so brisk as it was, but the volume of trade is satisfactory, and jobbers are pleased with the shipping. No changes in quotations are announced, although there is a general firmness all the way round, and it is impossible to be certain as to which line will be the next to advance. Cotton goods are very firm, while, of course, the rubber market continues to point to an increase in associated goods.

Christmas lines are now moving splendidly. Carvers in cases table cutlery, pocket knives, shaving sets, ordinary and safety razors are in strong demand, while brass lines are also prominent. There is a very good movement in all Christmas lines, and dealers seem to be anticipating a strong consuming demand. Lumbermen's supplies are prominent, and so are nails, and bolts and nuts. The rush in building before the snow comes has stimulated builders' hardware. Colder weather would help the sale of snow shovels and stoves and ranges, although in the latter lines the demand is very good.

BUILDERS' HARDWARE—Builders' hardware shows stimulation due to the rush in building before the snow comes. Good orders for the last boats have also been received. Sash cords are firm, and the recent advance does not seem to have affected the demand. No further changes are announced, and we quote: Lock sets (inside), $4 per doz. and up; lock sets (outside), $13.20 and up; common rim locks, $1.10 per doz.; porcelain knobs, $1.10 per doz.; sash cords, 32½c to 33c.

WINTER LINES—Good assorted orders are coming in for weather strip, sleigh bells, horse blankets, and cow ties. Colder weather would no doubt stimulate general sorting up orders. Household lines are selling well especially carpet sweepers, wringers, washers, mops, clothes baskets, and brooms. The strength in cotton goods has not checked the demand, and good orders have come in for rope and clothes lines. Enamelware is selling well, and tinware keeps a steady selling gait.

CUTLERY AND SILVERWARE—Cutlery is one of the most prominent movers. Good assorted orders for lines suitable for the Christmas trade are being received, and some difficulty may be experienced later on in filling all requirements. Table cutlery, spoons, ordinary and safety razors, shaving sets, manicure sets, and cut glass lines are prominent movers. Travellers report a stronger movement on the part of dealers to look after the holiday trade.

SPORTING GOODS—There is now a good movement in skates and hockey sticks and jobbers stocks are showing the inroads made upon them. Guns and ammunition are in quiet demand although there is a fair movement. Air guns and revolvers for indoor shooting are showing strength. Snowshoes, toboggans and skis are moving, while there is a better call for gymnastic lines.

MINERS' SUPPLIES—Picks, powder and hammers are the best movers, but the demand generally has quieted down. We quote: Miners' picks, 16½c a pound; prospectors' hammers, 16½c; pick handles, $1.85 a dozen; drilling hammers, 6c a pound; crowbars, 3½c; drill steel, 8c.

BOLTS AND NUTS—There is a strong demand still showing, and the market is in very good shape. Prices are firm, and unchanged. We quote: Discounts on carriage bolts, ⅜ and smaller, 70; machine bolts, ⅜ and smaller, 70; machine bolts, ⅜ and less, 60, 10 and 10; coach screws, 75; stove bolts, 80 and 7½.

NAILS—Good consignments are going out by the last boats, and the demand generally is very satisfactory. The market is firm and dealers had better watch the situation carefully. We quote wire nails $2.25 base, cut nails $2.40.

SCREWS—The market is steady and unchanged. The demand is very good for the most common sizes. We quote: 85 and 10 off for flat and round head bright; 75 and 10 off for flat head brass, and 70 and 10 for round head brass.

LUMBERMEN'S SUPPLIES—Camp goods are in active demand, and an encouraging movement in lumbering operations is reported. Cross cut saws and axes are in strong demand, and the other lines are showing better strength. We quote: Cant hooks, $12 a dozen and up; axes, $6.50 a dozen and up; axe handles, $1.15 and up; cross-cut saws (inferior) 25c per foot and up; better grades, 43c per foot and up; axe wedges, 25c a doz. and up.

SHOVELS—Colder weather would stimulate the movement in snow shovels. Other lines are somewhat slower, although fair orders are reported at unchanged prices. We quote: First and second grade of spades, 60 and 2½; 3rd and 4th, 50 and 2½; scoops, 1st and 2nd grades, 50 and 5; 3rd and 4th, 45 and 5.

WIRE—There is no changes in the wire situation, and trade is quiet. We quote: Barb wire, car lots, mixed, $2.50; small lots, $2.55; plain twist, car lots, $2.80; small, $2.85. Galvanized wire, No. 9, $2.25 in straight and mixed car lots, and $2.30 small lots, f.o.b., Montreal. Coiled spring fencing, $2.30; straight and mixed car lots, and $2.35 small lots. Plain wire, bright, annealed and annealed and oiled, $2.35 base. Staples, bright, $2.60; galv., $2.85.

TORONTO.

November 12.—Hardware trading this week has eased off somewhat. Builders' hardware and seasonable lines for stocking-up being the principal goods moving. The spring-like weather of the past few days has not induced buying, but rather deferred the placing of some orders.

Booking for next summer's wire cloth, lawn mowers, poultry netting and garden hose still goes on, but many hardwaremen are now pretty well supplied for next season's trade. Prices ruling are on about the same level as past season's quotations. Rubber hose, though, may go higher owing to the enhanced value of crude rubber. Raw rubber has increased from 75 to 100 per cent. since last season's crop, and the finished rubber is now $2.20 per pound, against $1.35 last year. Rubber footwear makers have advanced their wares 25 per cent., and it is not unreasonable to think that a corresponding increase will be made in the price of garden hose.

BUILDERS' HARDWARE—As the season advances there is a general increase of activity among builders who are seeking the immediate filling of their orders. This makes trading as brisk as at any time during the season. Not that the building trade is so brisk as in the midsummer days, but because manufacturers, jobbers and hardwaremen have been up to now two months behind in filling orders is this department kept on the move. Locks, bells, boxes, pulls, etc., are the most wantable lines. Mechanics' tools, too, are particularly active, and this week has seen an impetus given to sales of tools, especially carpenters' tools.

SEASONABLE LINES—Shelf hardware and an immense variety of hardware articles are going out in orders plentiful enough but calling for small quantities of goods. These are for replenishing depleted stocks. Some early winter goods are also moving, but the fine weather has not been provocative of big business in this line.

HEATING AND LIGHTING GOODS—Stoves, ranges and furnaces are still the go and it seems almost impossible to stop the demand. This fall has been one of the best stove-selling seasons in the history of the country. Lamps and supplies are fairly active, with some inquiry for fancy varieties.

HOUSEHOLD GOODS—House-cleaning and kitchen goods are steadily active, with no particular line pressing.

CUTLERY AND SILVERWARE—Cutlery orders are very good. The better grades of steel knives are asked for, not only for the holiday season, but for the regular trade. In silverware, spoons are better in demand than any other single line.

SPORTING GOODS—The out-of-doors sports are out of season and sales have been slow. In counting up the business in guns and rifles, one prominent local hardwareman said it was the best season he ever had. Gymnasium outfits and single articles are the sporting goods now selling, though skates, hockey sticks, tobogans, etc., are ready for the ice when winter makes its appearance.

HEAVY GOODS—Structural beams are especially active in Toronto, where are being erected a number of huge structures. Rods, pipe and bars are steady. Wire nails are at top notch in sales, and screws are equally fine in demand.

Catalogues and Booklets

Manufacturers or jobbers sending printed matter for review, should draw attention to the new lines listed; and retailers sending for catalogues or other matter, should write on their regular printed letterhead and mention this paper to make clear that they are in the trade.

Refrigerators and Screens.—A pictorial representation of the company's new factory and office at Paris forms the frontispiece of the 1910 catalogue of The Sanderson-Harold Co., makers of screen doors, window screens, refrigerators, etc. It will be remembered that the company's factory was destroyed last Christmas eve; and now on the site has been erected a larger and more modern structure. In refrigerators Sanderson-Harold make a number of sizes and grades, prominent among them are their "Imperial," "Royal Oak" and "Opalite." These refrigerators are built of solid ash and solid oak with a golden finish. Some are lined with galvanized steel; others with white enamel. The trimmings may be in polished gold or nickeled brass; and every chest is guaranteed. In screens the catalogue illustrates eight styles of doors and two of windows. The construction of these goods is especially looked after. The lumber is carefully selected, the wire cloth is the best that can be procured, and the finish is a durable one.

HARDWARE LETTER BOX

Any question on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

Canvas Gloves.—"Subscriber," asks what firms make canvas gloves.

The B. B. Glove and Mitt Co., Beebee Plains Que., and J. H. Kerr & Co., Brantford.—Editor.

Express Wagons.—J. T. Locke, Corrunna, Ont., asks what firms manufacture baby carriages, boys' wagons, etc.

Gendron Manufacturing Co., Toronto, and Woodstock Wagon Co., Woodstock. —Editor.

Wood Ashes—A. W. Humphries, Parkhill, asks if any firm purchases wood ashes.

We know of no buyer of this commodity, soap makers having found a cheaper and better material for their use.—Editor.

Stove Repairs. — R. Ross, Listowel, asks where repairs for stoves formerly made by Copp Bros., Hamilton, can be secured.

From Jones Bros., Bracondale, Toronto.—Editor.

Prism Glass in Walks.—J. W. Rorke, Norwood, asks what firms make prismatic glass for insertion in iron frames in cement walks.

Hobbs Manufacturing Company, London and Toronto.—Editor.

HARDWARE TRADE GOSSIP

Ontario.

Geo. H. Trott has sold his hardware business at Bothwell to Dent Brothers.

The Sarnia Stove Store at Sarnia have added a pipe-fitting department to their business.

H. A. Gunn, of H. S. Howland, Sons & Co., Toronto, was laid up with a slight illness during the early part of the week.

Ingram & Davey, St. Thomas, have been awarded the contract for the metal work on the Grace Methodist Church at that place.

A. Adams, Calgary, representing Wood, Vallance & Co., in the western provinces and at the coast, is spending a few days in Toronto this week.

Chairman Niven, of the Board of Health, is working on plans for the installation of a garbage system for London., Ont., to cost approximately $30,000. This should mean something for the London hardware trade in the handling of garbage cans.

The insolvent estate of S. A. Crawford, hardware merchant, St. Thomas, will pay fifty cents on the dollar on the ordinary claims, amounting to $19,095, as well as a preferred liability of $313.75, besides allowing for the costs of winding up the estate. The stock realized $13,918.10, and the store $725.68.

At a recent meeting held in Wingham, Ont., directors of the Western Foundry Co. were elected as follows: T. A. Mills, J. J. Cunningham, R. Vanstone, J. A. McLean and W. D. Varey. Mr. Mills was elected as president and the stock held by Dr. Allen, of Toronto, was transferred to Mr. Mills and other Winghamites. The Western Foundry Co. is considering the enlargement of the plant.

On Saturday evening the office and sales staff of the Pease Foundry Co., Toronto, gave a complimentary dinner in the St. Charles cafe to T. B. Medforth, who has been their accountant for a number of years, and who has accepted a position with a trust company in Vancouver. A pleasant feature of the evening was the presentation to Mr. Medforth of a case of pipes.

Edward Gurney and E. Holt Gurney, president and sales manager of the Gurney Foundry Co., Toronto, returned on Wednesday from a month's trip to the Pacific coast. They report a good normal trade being done, with no prospective shortages in stocks of heating apparatus. The announcement of the proposed establishment of a branch foundry at New Westminster they characterize as premature.

Quebec.

J. A. Wright, Sorel, Que., has been on a business visit to Montreal.

E. C. McCoy, Huntingdon, Que., has been calling on the Montreal hardware trade.

C. D. Ten Eyck, of the American Fork & Hoe Co., is spending a few days in Montreal, on his way east.

D. Freeland, of James Eadie & Sons, Clydesdale Tube Works, Rutherglen, near Glasgow, has been on a visit to Montreal.

Edmond Stanley, of the Ontario Wind Engine & Pump Co., Toronto, was a caller at the Montreal office of Hardware and Metal.

The Montreal Steel Works have purchased a large property in Longue Pointe, with the view of erecting a large plant at an early date.

Willis Mitchell, of James Courtland & Sons, Birmingham, Eng., who has been making a trip through the country from coast to coast, has left for home. He reported business as being exceedingly good.

The Rock Island Tool Co. has been taken over by the Rock Island Manufacturing Co. The business has been reorganized, and Harry Roper, of Montreal, has been appointed agent for the new company.

H. K. S. Hemming, of the Auto-Strop Safety Razor Company of Canada, Montreal, has offered a $100 trophy for the best essay on the "Pleasures of a Canadian Winter," in connection with the winter carnival movement in Montreal.

One of the reasons for the recent advance in the prices of chain quoted by the Standard Chain Co., Pittsburg, was the 5 per cent. increase in wages to the employes of the company, to be followed by another 5 per cent. at the beginning of the new year.

John Warden Paterson, president of the Paterson Mfg. Co., Montreal, Toronto, Winnipeg and Vancouver, died at the residence of his brother, Alex. J. Paterson, Mobile, Ala., where he with his wife were visiting prior to spending the winter at Pasadena, Cal.

The Valleyfield Manufacturing Company have erected a large concrete building alongside the G.T.R. track, at Valleyfield, Que., and are now manufacturing stoves and ranges, and intend to manufacture iron beds. Mr. Howard, formerly of Morrisburg, is the manager.

West.

Tenders are being called for the sheet metal roofing of the asylum buildings at Ponoka, Alta.

Lauder & Co., hardwaremen and lumber dealers, Elphinstone, Man., have changed the firm name to Leo. G. P. Lauder.

Thos. Smith, of Keyes, Man., left for Ireland last week, after a sojourn of five years in this country. He returns home to enter hardware business with his father in Felfast.

C. T. Laird, who for nearly five years past has conducted a hardware business at Indian Head, will shortly open up in the same line of business in Regina, having secured premises for that purpose.

S. A. Clark Limited, Saskatoon, have decided to discontinue business and have placed their $35,000 stock in the hands of The Fvely Sales Co., of Vancouver and Calgary, who will sell off the stock of stoves, hardware goods and ammunition and all tinware.

Trade Gossip from Canada's Eastern Provinces

New Manufacturing and Wholesale House at St. John—Another New Industry May Locate at St. John—Serious Delays in Delivery of Goods Complained of by Halifax Merchants—Change in Montreal Varnish Firm.

ST. JOHN.

Nov. 10.—There is a prospect of St. John getting another new industry. At a meeting of the city council held on Friday a communication was received from Kennedy Stinson, manager of the Stinson-Reeb Builders' Supply Company, Montreal, which deals in bricks, lime, etc., asking for a sixty days' option of a number of lots owned by the city and situated in Lancaster. Mr. Stinson asks the city to name the lowest figure for the sale of the lots. It is not stated what the property is wanted for but as there is considerable lime stone, as well as an old lime kiln on the property it believed that manufacturing along this line is contemplated. The city had practically agreed to lease the lots asked for, to the David Craig Co., for their cement industry but the lease has not yet been signed. The matter is being considered.

The aids to navigation committee of the board of trade is to meet soon to discuss matters connected with lights and buoys in the Bay of Fundy and it is stated they will urge on the government the advisability of having a repair yard here, where buoys of all kinds can be quickly repaired.

Gideon Hevenor, G. N. Hevenor, Miss Alice E. Hevenor, Mrs. A. E. Hevenor, of St. John, and B. F. Hevenor, of Toronto, are applying for incorporation as G. Hevenor, Limited, to take over and carry on the business of manufacturing and dealing in copper, brass, lead and iron in all its branches, now carried on by G. Hevenor. The application also sets forth that the firm shall carry on a wholesale and retail hardware business, plumbing supplies, roofing, electro and band plating business. The capital stock is $24,000.

The St. John Railway Company is remodelling their office building on Union Street and will convert the entire ground floor into a showroom for electric light and gas fixtures and gas stoves and accessories.

W. E. H.

HALIFAX.

November 8.—Halifax hardware dealers are complaining of the delay in the delivery of goods. The complaint is general, both as to the manufacturers in Canada and the United States. This refers particularly to shelf goods. Some of the dealers ordered goods over a month ago, and up to the present they have not received them, nor any advice of them. The delay in the forwarding of these goods seriously handicaps the dealers just at this season of the year when they have to make shipments to the outports before the close of navigation, and the orders for which are already in hand. In some cases goods bought on the other side of the Atlantic can be delievered here quicker than if they were purchased in Canada or the United States. The manufacturers may be rushed with orders, but the dealers think that they should be able to forward the goods within a month or six weeks, at least.

Business is reported good throughout the province, and the prospects are excellent for a continuance. Collections are satisfactory and in some sections they have improved considerably of late. All the large manufacturing plants are working to their capacity, and they have a good supply of orders on hand, sufficient to keep them busy until the end of the year at least.

The coming winter promises to be a busy one in the colliery districts in Cape Breton. The Dominion Coal Co. intend to operate their mines through the whole season to their fullest capacity, and they hope to bank half a million tons of coal. During past winters the company has closed down some of its collieries, and others have been worked only half-time. This decision of the company will make business brisk in the mining districts of Cape Breton.

The Malleable Iron Works at Amherst are again in operation, and are giving employment to forty men. It is possible that the staff may be increased in the near future.

J. H.

MONTREAL.

November 11.—The Dougall Varnish Co., successors to McCaskill, Dougall & Co., Montreal, has formed an alliance with the Murphy Varnish Co., of Newark, N.J., for the purpose of enlarging its business in certain directions. Mr. Dougall retains his interest in the business and will remain its president and managing-director.

The Murphy Varnish Co. has acquired the stock of certain other stockholders and will, associated with Mr. Dougall, enter actively into the development of the Dougall Varnish Co.'s business. The railway and carriage varnishes manufactured by the Dougall Varnish Co., are well know throughout Canada, and will be improved where possible. The company will also furnish their formulas and processes, for piano, fine cabinet and architectural varnishes, and these will be made in Montreal in future.

Bernard J. Coghlin, head of the firm of B. J. Coghlin & Co., hardware merchants, St. Paul Street, Montreal, died suddenly on Wednesday morning from heart failure, at the age of 73.

Mr. Coghlin was born in Ireland and commenced his commercial career in Sheffield, England, entering the firm of Hunter & Co., steel and iron manufacturers, where he remained untid 1868. In that year he came to Montreal, but retained his Sheffield connection. He began business at once on his own account as a hardware, steel and iron merchant, and son built up a flourishing trade. He extended it by becoming a manufacturer of railway supplies, such as springs and axles.

He was at one time sole representative for Canada of the White Star Line, and was connected with the Board of Trade for about thirty years. Deceased was one of the oldest members of the Montreal Hunt Club, a member of the Montreal Club, and the Montreal Reform Club. He is survived by two sons, B. W. Coghlin and G. R. Coghlin, who are in the business, and one daughter.

Interesting Trade Items Gathered in Ontario

Kingston Hardwareman Paralyzed—Good Building Season at Smith's Falls—Window Displays at Guelph — New Hardware Specialty Factory at Toronto— By-law Against Transient Traders Passed at Brantford.

KINGSTON.

Nov. 10.—Lemmon & Sons, who for a number of years have carried on a hardware and plumbing business at 351 King Street, have withdrawn from the hardware business, and will carry on a general plumbing and tinsmithing contracting business, at 273 Earl Street. Mr. Lemmon is a member of the board of health, and has given good service on that civic body. His knowledge of plumbing, etc., is the means of giving the board valuable information along sanitary lines and his counsel is eagerly sought after.

The new mica industry at Cape Vincent, N.Y., is on the point of beginning operations. A syndicate of Watertown men have taken hold of the business of grinding the mica waste, or broken mica of the Canadian mines. The reason for the establishment of the mines on the American side, is because of the excessive tariff laid on the finished product, $100 per ton, when taken over there, and where it must be sold for $40 per ton, or less. On the mine waste, and by products unmanufactured, there is no duty, and the owners, aided by Watertown capital, will finish the product on the American side. Buildings have been rented, and the mill machinery is ready to be placed in place. A big barge load of the raw material is now at the dock there, and it is hoped that enough raw material will be stored there before the close of navigation to keep the mill in operation during all the winter.

James Nugent, hardware merchant, is confined to the house with a severe illness. He suffered a paralytic stroke.

E. G. B.

OTTAWA.

November 10.—Business is very good among the hardware merchants. A specially good trade has been experienced in stores.

The Dominion Bridge Co., Lachine, have purchased property in Clarkstown, a suburb, for a storehouse for material and working plants.

During the last two weeks over $80,000 worth of permits have been issued. Of this amount one item of $11,000 was for a brick machine shop, to be erected by the Ottawa Car Co.

The following articles have been transferred to the list of goods, which may be imported into Canada: Steel imported for use in own factories in the manufacture of rough unfinished parts to be used in rifles for the Government; gun barrels in single tubes, forged, roughbored; rolled iron and steel rods not over half an inch in diameter or width, to be used in the manufacture of horse shoe nails.

Cold rolled sheets or plates of steel with sheared edges over fourteen gauge, and not less than one and one-half inches wide when imported by manufacturers of mower bars, hinges, typewriters and sewing machines, to be used in manufatories' own factories.

G. E. M H.

TORONTO.

Nov. 11.—The Collins Manufacturing Company, have erected a new factory on Symington Avenue, near the C.P.R. tracks and will occupy it this month. It is 25 x 90 feet in size and capable of enlargement. New machinery has been installed and several new hardware specialties will be put on the market soon, at present their energies being directed chiefly to sprayers, gas stoves, steam cookers, asbestos thimbles, etc.

T. S. Hobbs, whose name was recently connected with the new Dominion Hardware Company, who have secured a charter to establish a wholesale hardware house in Toronto, states that he has not affiliated himself with the new concern and does not intend to do so.

W. W.

BERLIN.

Nov. 9.—Such important questions as early closing and transient traders' licenses, were dealt with at the last meeting of the Berlin Retail Merchants' Association. Complaints were made that some merchants were infringing the early closing by-law, which set the hour for 6.15 on week days, and 10 for Saturday nights and nights before holidays. An effort will be made to have all stores in the town close at the hours set by the Association. There was considerable discussion regarding the tax on transient traders. While it was the consensus of opinion that some of the dealers who opened up with the intention of remaining only a short time were a detriment to the town, and were encouraged by the law requiring only $50, and that not in advance, it was felt that a change might prove detrimental to the small dealer, and not the large one.

W. A.

BRANTFORD.

November 9. — Local hardware and sporting goods dealers report that the sale of rifles and ammunition for the deer hunting season in the highlands of Ontario, has been very good. A large number of local hunters have already left for distant points on that score.

Alexander Lamb, has decided to erect two new stores on Colborne Street.

The contract for the erection of the new branch of the Bank of Hamilton at Paris, was let to Tindall & Sons, of Woodstock.

T. J. Minnes & Co., secured the contract for the plumbing and heating at the new Collegiate Institute, the contract price being near $10,000. They are at present installing the heating plant in Park Baptist church.

Tenders will be asked for alterations and additions to Wellington Street Methodist church, to cost approximately $15,000.

Another by-law under consideration is re the storage of gasolene within a certain limit in the city. It was at first proposed to limit the amount to 5 gallons, but this amount will be changed, as some autos carry more than that, and they would be breaking the law in coming into the city. A new by-law governing the storage of inflammable oils will be prepared.

A. W.

GUELPH.

November 9.—Guelph hardware merchants have been throwing out some timely suggestions for their customers during the past week or so Their show windows and display advertisements in the papers have been particularly appropriate for the season.

With the long winter evenings comes the increased need of lamps, and several good windows are dressed with fine displays of lamps of all kinds. McMillan Bros., and Bond's have both had good displays of this kind, and Bond's have been featuring it in their advertisements, one of which read "Come down to-night and see our window full of lamps and you'll feel light." The window was particularly attractive after dark, for it was very brilliantly lit up.

H. Occomore, in pushing the stove trade, which has been very good in Guelph this season, has followed out one idea in window dressing faithfully. He has gone in wholly for simple displays. "One good stove," he claims, "is enough for a woman to look at at one time, and so in each of his two store windows he has one stove displayed. In one was a fine kitchen range. The floor of the window was covered with oilcloth, and there was nothing else there but the one stove and its attachments. In the other window was a splendid self-feeding heater, with nothing else except a cosy looking rug in front of it. Suitable backgrounds were provided with cloth curtains of one color, plain and neat, serving as an ideal background, while detracting no attention from the goods displayed.

G. A. Richardson has been featuring sporting goods in his window displays lately, while S. & G. Penfold have been putting in some good suggestive displays of farm hardware of a timely sort.

News From the Prairie and British Columbia

Hardware Millinery Window at Calgary—Building at Victoria Shows an Increase of 69 Per Cent Over Last Year — Wire Manufacturing Plant to be Established at Vancouver—Central Heating Plant to be Established—Winnipeg Clerk Betrays His Employer's Trust and Gets Long Term in Prison.

VANCOUVER.

November 6.—The Vancouver Steam Supply Co., in which leading plumbers are interested, expect to have its franchise soon completed by the city council, and it will come up again shortly with a small alteration. As stated, the object is to supply heat to buildings from a central depot, pipes being laid on the streets, in the same way as gas pipes. The franchise will expire in 1960, the city having the right of purchase in 30 years in a year's notice.

Steadily the opportunities of the west are being noticed by prominent manufacturers in the east. The latest to take action is the Dominion Wire Manufacturing Co., of Montreal. W. H. Farrell, the president of the company, spent a week here looking over the field, and it is proposed to at once establish a factory and warehouse, which will be ready in two months. For the immediate present, the operations of the company will be confined to wire nails, and will warehouse a complete line of its product for this territory.

Another concern to start operations here is the Pacific Creosoting Co., Seattle. H. R. Rood, the head of the company, has associated with him several local capitalists, and a plant will be erected on Burrard Inlet.

Local building conditions continue good, which maintains an active demand in hardware lines and in lumber. In fact, the local trade has been a great factor in the success of the lumber business this year. Generally speaking, the lumber trade has been good, though prices have only been on an average. The shingle, though now quiet—this being the

off time of the year for business—has also been satisfactory. The prospects are very good. Permits for the past week in Vancouver building totalled $110,725, the largest being $15,000, for the remodelling of a store.

L. X. Truxler, of Vernon, B.C., has invented a new form of truck that has many advantages over the old style. It consists of a combined cement cart, brick barrow and truck, and has many points of superiority over anything on the market. The centre of gravity is so placed that cement may be dumped from the scoop in any quantity desired, and the weight rests entirely on the wheels, relieving the arms of any load. To remove the scoop and substitute a platform for the conveyance of bricks or blocks requiries only the turn of a crank, which unlocks the box and permits its removal in an instant. A third change to a plain truck is made in an equally expeditious manner, and the device, which locks it keeps it perfectly steady in any position. The invention has been satisfactorily tested.

R. B. F.

VICTORIA.

Nov. 6.—Building still continues very active. The value of permits issued during October aggregate $104,840, as against about $90,000 in October last year. This year, for the ten months the value of permits issued exceeds the whole of last year by $233,795, and for the mere ten months by $633,130, an increase of 69 per cent.

During the past week permits have been taken out for a three storey building for T. N. Hibben & Co., to cost $15,000, alterations and additions to Government Street building for E. A. Morris to cost $12,000.

Fire destroyed the mill of the Brackman & Ker Milling Co., yesterday, the loss being about $30,000. Immediate work will be started on the new building, which will be entirely of brick.

W. P. Dempster has decided to build a new carriage and blacksmith shop, to cost $4,000.

A large addition is to be made to the Empress Hotel, in Victoria. The addition will cost about $75,000. W. B. C.

CALGARY.

November 8.—The Sisters of Charity in Alberta and Saskatchewan announce that a large addition is to be made to the Holy Cross Hospital at a cost of between $75,000 and $80,000.

The new A. J. Samis block will be ready for occupancy in about four weeks' time. The block is five stories in height with basement. The first three stories are of reinforced concrete, and the two upper stories of brick. The building cost about $55,000.

Seventy thousand Americans will settle this year on 20,000 to 25,000 farms in the Canadian Northwest, and bring with them a wealth of $70,000,000.

"Did you see the hats?" were the words of every one in Calgary the past few days. A very artistic millinery window, which created the wonder of the womenfolk, and caused milliners to be envious, was shown by the Comer Hardware firm on Saturday last. Very novel effects were shown by ordinary hardware lines and were especially appropriate for Hallowe'en.

Mr. Wright, who has been traveling for the J. H. Ashdown Co., in Manitoba, arrived in Calgary on Monday to take the ground of Mr. Sales, who has been travelling in southern Alberta.

M. G.

WINNIPEG.

November 10.—J. A. G. Loomer, recently empolyed by the J. H. Ashdown Hardware Co., as manager of the electrical fixture department at the retail store, having held this position for nearly two years, prior to which he had been employed in different positions with the same company, has been convicted on several charges of theft, and sentenced to a term in prison. In October, 1909, it was discovered that Loomer had been raising time sheets turned in by workmen engaged in putting up fixtures, and with their co-operation, had fraudulently drawn the amount of such increase. On investigation it was found that this practice had been going on for about a year and a half, and further than this, it was found he had been in the habit of selling goods for cash, putting the amount in his pocket, and not turning in any cash sale slip. He had also sold goods, both for cash and credit, to an electrical contractor, and arranged with him to make the cheques out to the order of J. A. G. Loomer, instead of to the company. These cheques he cashed and applied the proceeds to his own personal uses. He also arranged with a clothing firm to do certain window lighting, purchased an overcoat from them and applied the amount due for the coat on the bill for window lighting, charging the clothier with only the difference between the contract price and the amount of the overcoat.

Loomer was arrested and charged on nine different charges of theft, to all of which he pleaded guilty, receiving a sentence of twenty-three months in the Portage gaol, in spite of the fact that his friends sent a deputation to the magistrate offering to make good any shortage and do anything in their power to give him another chance, the magistrate holding that while it was his first offence, it was such a flagrant breach of trust and extended over such a long period, and further, that his thefts were committed in so many different ways, he felt obliged, for the sake of example, to give him the sentence he did.

Healthy Condition of Western Canadian Trade

United States Banker Makes a Close Study of the Situation —Improvement Over Last Year—Board of Trade Wants Lowering of Telegraph Rates.

Staff Correspondence.

Winnipeg, Nov. 9.—A United States banker visited the west recently for the purpose of investigating actual commercial conditions. As a result of that visit the following report was published across the line.—

"In the northwest trade is not only good, but real estate transactions are increasing, money is easy and a large number of tourists continue to visit the country. A good expansion and heavy immigration is expected next year. Weather conditions continue favorable throughout Manitoba and Saskatchewan. Threshing of wheat is about completed in the first named province, and it is well advanced in the last mentioned. The weather has been excellent for plowing, and a goodly increase in acreage is indicated. The railways have all the wheat they can handle, and the movement to date surpasses that of other years. Business failures for the week ending with Thursday last, number 24, which compares with 30 last week and 32 in the same week last year. Bank clearings for the week terminating with Thursday of this week aggregate $105,361,000, sixteen per cent. below last week's, but seventeen per cent. over those of the same week last year."

An important conference is to be held in the next few days, between a special committee appointed by the Winnipeg Board of Trade and James Kent, superintendent of the Canadian Pacific Railway, telegraph department, regarding the lowering of rates. It is not known whether it is possible to lower the rates or not, and the exact nature of the board's request is not known. A committee of the Board of Trade has also been investigating cable rates, and it is understood that appeals will soon be made to proper authorities regarding some immediate relief of the commercial man's position in this direction. The board's action is in continuance of the pressure so successfully brought to bear by the Imperial Press Conference.

That which will mean much to the commercial life of the west in years to come, was seriously discussed in Prince Albert by the Board of Trade in that place. The board have decided to take up the proposition of making the Saskatchewan river navigable from Winnipeg through to Edmonton. They will at once draft a resolution to the Government, urging its attention to the project. The possibility of this project has been for years enthusiastically asserted by a few citizens of the west.

CORRUGATED IRON

We make it – either painted or galvanized, in 3, 4, 6, 8, 10 foot lengths. In 27½ inch or 33 inch widths.

Metal Siding and Shingles

Galvanized or painted, all weights. Send us your orders.

THE "HAS-MADE-GOOD" Beats THE "JUST-AS-GOOD"

THAT is why Stephens Ready Mixed Paint is demanded by discriminating buyers. IT HAS MADE GOOD. For twenty-seven years and more we have been manufacturing paint in Winnipeg. Stephens Paint is the outgrowth of an intimate technical knowledge and long experience **in this special field** of paint making. We say **special** because of the peculiar climatic conditions of the West, conditions that prevail nowhere else in Canada and which require specially prepared paints. Stephens goods are manufactured in the West, for the West. Quality, Quantity and Prompt Shipments. Three things we make a point of.

A few Reasons Why You Should Handle PEASE ECONOMY ROUND HOT WATER BOILERS

They are built especially for basements with low ceilings ---which gives them a wider demand.

They have Iron to Iron connections.

They have a large Centre Water Column.

They are set without rubber packing or washers.

They have large, powerful Direct Fire Surfaces.

They embody every modern improvement in boiler construction which is of real value either in adding to heating efficiencyor reducing fuel consumption. As a result

ECONOMY BOILERS ARE EASY TO OPERATE AND ARE VERY ECONOMICAL.

If you are a practical dealer, a perusal of our Booklet will convince you. Send for a copy to-day.

Western Canada Hardware Market Situation

Our Western Correspondent Reviews the Market Outlook — Hardware Quotations Corrected by Telegraph From Hardware and Metal's Winnipeg Office up to Noon on Friday.

Governing conditions make trade in cutlery and silverware considerably better than during the past two years. More money is in circulation and the buying is more for the better class of goods.

In safety razors a big business is being done, all makes selling really well Cutlery in cases, carvers, etc., are moving nicely and prospects are that the sale of these will be large for Christmas. A better feeling pervades the whole community and the greater ease in selling shows how the consumer is better situated than usual.

Annual Meeting of Sherwin-Williams' Travelers

Salesmen From all Parts of Canada Gather at Montreal—Spirit of Friendship and Co-operation Manifested at Banquet—How Travelers can Assist Retailers.

The annual convention of the traveling representatives, sales managers, and heads of the departments of the Sherwin-Williams Company of Canada was held at the head offices and factory, Montreal, last week, the following being present: W. H. Cottingham, president of the company; C. C. Ballantyne, managing director; W. S. Fallis, western sales manager, Winnipeg; R. C. Misson, eastern salesmanager, Montreal; J. D. Barker, superintendent; L. R. Greene, manager advertising department; traveling representatives—G. E. Boomer, R. Johnson, C. A. Thomas, J. N. Themens, W. P. Downing, J. A. Derouin, H. H. Eager, J. W. Benson, A. E. Cowley, D. Crevier, J. J. Whalen, R. Archibald, Jas. McMartin, J. E. Auger, W. J. Miller, R. Vincent, J. J. Harkness, W. R. Pottruff, K. E. Parsons, J. F. Ryan, R. E. Stinson, W. L. Massiah, and R. H. Carter.

W. H. COTTINGHAM,
President Sherwin-Williams Company of Canada, Montreal.

The convention started on Wednesday morning, and in his opening remarks Mr. Ballantyne referred to the company's successful fiscal year closing August 30, and to the very bright and promising outlook for the coming year. He heartily thanked the sales managers, heads of departments, and traveling representatives for their co-operation in bringing about such a magnificent showing.

Mr. Cottingham expressed his great satisfaction with the year the company had had, not only in Canada but in the United States and in foreign fields. He then briefly outlined the further extensions that the Sherwin-Williams Company have in view, particularly referring to the erection at the present time at their Chicago plant of a most modern white lead corroding works where the old Dutch process will be used.

The president afterwards handed cheques to the top-notcher winners—H. H. Eager, Winnipeg house, being first; R. Archibald, Montreal house, second, and D. Crevier, Montreal house, third. Cheques were also distributed to those representatives who had reached their estimates.

Following this a thorough inspection was made of the plant, including the paint and varnish factories, linseed oil mill, and box factory.

The convention continued to the end of the week, Mr. Ballantyne being in the chair. While it was felt that owing to the great increased cost of linseed oil and the advances in other important raw materials that enter into S.-W.P. and other prepared paints, prices should be advanced, it was thought advisable for the time being not to make any change in price, but the representatives were informed that unless these raw materials declined in price the company would be compelled to make a further advance in their selling prices. The convention was a most successful one, and closed with the customary banquet.

The Banquet.

With hand to hand and heart to heart
We cover every clime,
We're bound to be bigger and greater than ever
From this convention time.

It is impossible to imagine a more enthusiastic gathering than that which assembled at the Canada Club for the annual banquet. It was the termination of the convention, and after many hours of earnest deliberation and close thinking, the boys were out to enjoy themselves. And they did so, in this being encouraged by their president, W. H. Cottingham, and their managing director, C. C. Ballantyne. Topical songs rewritten for the occasion, pungent telegrams to certain members of the company, the presentation of two knighthoods of the order of the Turkish Bath, the presence of the Little Paint Man himself, and other quips and cranks, made the evening pass most pleasantly. But every now and then a serious note was struck, and it was evident that the staff were impressed with the ideals of the company as expressed by Mr. Cottingham and Mr. Ballantyne, and were going to set a hard pace for the coming year. It was not surprising that "The Glad Convention Time" song went with a swing.

Mr. Cottingham presided, and he was supported by C. C. Ballantyne, J. H. Gordon, cashier, R. C. Misson, W. S. Fallis, J. D. Barker, L. R. Greene, R. McMaster, Montreal Rolling Mills, and other members of the staff.

L. R. Greene, introduced as "Peerless Greene" by the chairman, read a letter from the Little Paint Man in which the latter referred to the qualities of a new specialty of the company, "Flaxoap,"

C. C. BALLANTYNE, MONTREAL,
Managing Director Sherwin-Williams Company of Canada.

and in a vision visited the Sherwin-Williams' Montreal factory in 1920, and was struck with its enormous size, and other evidences of great growth, and the consequent elevation of Mr. Ballantyne to the dignity of the Earl of Westmount and Flaxoap.

Mr. Ballantyne was evidently surprised at the prognostication of the Little Paint Man, but that the future had no terror for him could be seen from his smiling face. The Little Paint Man, himself appeared in time to lead the musical honors attached to the toast.

Mr. Ballantyne in proposing "Our President" referred to the wonderful success of Mr. Cottingham from the day when he commenced his business career as a retailer in Ontario, until now when he was president of the largest paint and varnish works in the world. He had attained that position by hard work, and he knew of no man who had displayed more energy than their president. His success was an example and an inspiration to them, and showed what ability, close attention to detail, and hard labor could accomplish. It was a compliment to them that Mr. Cottingham had reserved for himself the presidencies of the Canadian and English concerns.

President Cottingham's Address.

Mr. Cottingham said that whatever success he had attained was due to the assistance he had received from those around him, and he referred to the great support of Mr. Ballantyne and the Canadian staff. He was always delighted to be with them, and he took the greatest interest in their work. Mr. Cottingham referred to the policy of the management in drawing upon their own staff for the filling of high positions. This was an incentive to their men and gave them something to work for. The selection of Mr. Misson and Mr. Fallis as sales managers was an example of their policy and the opportunities that each man had before him. He believed in steady service, and men who stayed by them did better than by changing. Success was due to combination, men and methods. It was their policy to help their representatives and the men who sold their goods, and the wisdom of this was evident in the success that had attended the Sherwin-Williams Company. They wanted to make their dealers better business men, not Sherwin-Williams' men but business men in a general sense. With their literature and the talk of their traveling staff they were teaching the dealer how to sell other lines of merchandise and to be strict over his collections. Dealers could not absorb their literature without becoming better merchants. His ambition, and the ambition of the great house he represented, was to succeed fairly. They had no desire for success at any price.

G. E. Boomer proposed the health of the sales managers, and said that the work done by those gentlemen had been well started, and their success was an example for the others to follow. Mr.

The Montreal Rolling Mills Co.

Fallis said that he took great pride in being connected with such an organization, and he looked forward to the time when they would have a great manufacturing plant at Winnipeg. Mr. Misson did not see how any of their men could be a failure with the incentive to work that they had before them.

"Our Representatives," was proposed by J. H. Gordon, who referred to commercial travelers being a necessity, and there was no doubt that the harmony between the office and traveling staff had greatly helped the company. C. A. Thomas, J. J. Whalen, D. Crevier and John F. Ryan replied.

Mr. Fallis proposed the toast of the "Managing Director," and said that a great deal of their success was due to his very great ability as organizer. His fair and courteous treatment to his staff caused him to be admired by all. They took as much pride in his prominence as he did himself. They hoped that Mr. Ballantyne would be their managing director for many years to come, and he could always depend upon their loyalty and support. Mr. Fallis also spoke of Mr. Ballantyne's public work.

Mr. Ballantyne said he would not for one moment take credit for the success of their business. He was fortunate in being assisted by the very best help. It would always be his aim to see that his staff had the chance of promotion. Referring to his public work as one of the Harbor Commissioners of Montreal, Mr. Ballantyne said that he and his colleagues on the board intended to make Montreal the best equipped port on the continent.

The toast of "The Accounts Department," "The Factory," and "The Visitors," concluded a most enjoyable evening. With

Sis! Boom! Ah-h-h!
S-W-P! Rah! Rah! Rah!

the company dispersed feeling that it was up to them to show the management that past success were nothing compared to those that were coming along.

PAINT AND OIL MARKETS

MONTREAL.

November 12.—Trade conditions are much quieter than they were, although some fairly large general orders for the last boats have come in. Stocks in dealers' hands are not reported heavy, but they are well assorted, and a good showing should be made in household specialties this and the following month. Staples are without feature, and any speculative element in linseed oil seems to be eliminated for the present.

No changes are reported in quotations, and the markets generally are firm with a good tone.

TURPENTINE.—Owing to a weakening in the turpentine market, and to the hand-to-mouth character of the buying there has been a sagging in turpentine prices, and a decline of 2c. per gal. is announced. We now quote 78c. for single barrels.

LINSEED OIL—Further advances have been checked for a time, and the market presents a much quieter appearance. The demand is on the light side. Stocks were well replenished before the recent advances, and buyers are at present content to stay off the market. We quote: 1 to 4 barrels, in one delivery, raw, 73c per gal.; boiled, 76c per gal.; net 30 days, f.o.b., Montreal.

GROUND WHITE LEAD—Like the other stapels the demand for ground white lead seems to have received a check, and only a fair turnover is reported. The market does not show much alteration as regards prices, and quotations are: Strictly pure about $5.25 to $5.75, according to quality, and No. 1 $4.85 to $5.25 f.o.b., Montreal.

RED LEAD—A healthy trade is reported in red lead, buyers being anxious to stock up before the winter rates commence. There is no change in prices, and we quote: Genuine red lead in casks, $4.25; in 100-lb. kegs, $4.75; less quantities at $5.75 per 100 lbs.; No. 1 red lead, casks, $3.75; kegs, $4.25, and smaller quantities, $5.25.

WHITE ZINC—A little better inquiry is noticed in white zinc tending to show that decorators in the larger centres are still busily engaged. The market is unchanged, and we quote: Dry V.M. Red Seal, 7½c; Red Seal, 7c; French V.M., 6c; Lehigh, 5c; white zinc, ground in oil, pure, 8½c; No. 1, 7c; No. 2, 5½c.

VARNISHES AND JAPANS—Prices have been lowered both for orange and white shellac gums, but no change in varnish prices are anticipated. General lines of carriage and furniture varnish are being shipped in good quantities.

PUTTY—Users are taking advantage of the short time remaining for low freights, and are buying in good quantities. The market is unchanged, and we quote: Standard putty, 800 lbs., in casks, $1.75; in 100-lb. drums, $2; bladder putty, 400 lbs., in barrels, $2.15; in 100-lb. cases, $2.25; in 25-lb. tins, $2.15; 12½-lb. tins, $3.25, f.o.b., Montreal.

TORONTO.

November 12.—While trading is fair and steady and above complaint, the passing week is probably the quietest business week for many moons. With the exception of glass, not a single paint line has risen above normal. Prices are unchanged and firm, the outlook being for higher figures if any change occurs.

Work among painters is brisk, and there seems to be a scarcity of workers. This year should prove a satisfactory one from the standpoint of the painter.

GLASS—Window glass is the particu-

White Lead

At the present time the white lead situation is interesting.

We are the only firm in Canada who corrode and grind white lead, in addition to making Varnish, Dry Colors, Paints, Enamels, etc., etc.

Our white lead proposition is naturally the very best.

INTERNATIONAL VARNISH CO., Ltd.

Makers of Fine Varnishes **TORONTO** **Branch of Standard Varnish Works**

NEW YORK CHICAGO LONDON BERLIN BRUSSELS

lar bright line of the week. Sales keep up—increasing in many cases. Stocks are very low. Some small importations have come in, but the present demand will soon exhaust these supplies. One of the trans-Atlantic vessels carrying glass came up to Montreal yesterday, and local jobbers anticipate that some of this glass is for them. The last boat up the St. Lawrence with glass stocks is expected next week. Prices are firm, the discount being about 30 per cent.

LINSEED OIL — The market is exceptionally firm, but jobbers are prepared to book orders for delivery any time between now and the last of March at the prices ruling at present. It is believed that there cannot be any reduction in this time, but if the seed market remains where it is just now there may be a further advance. Some few weeks ago it was thought that after January 1 prices would decline but as the present stock of seed has been investigated there seems little chance of this taking place and it is believed that present prices will be fully maintained for the winter. Raw is 73c for single barrels; 72c for 5-barrel lots and 71c for 10 barrels. Boiled oil is 3 cents higher for like quantities.

TURPENTINE—The market has been a little irregular during the past week. At the same time correspondence from Savannah shows that the indications are that for the months of November and December the quantities likely to come forward are expected to be much less than they were last year for the same months, and if the varnish makers should have their regular demands, it is not improbable that there might be a spurt during these two months and prices be advanced. Locally stocks are very light. Buying is also light. The ruling quotation is 83c, though "turps" are yet offered at 81c and 82c for single barrels by some jobbers.

WHITE LEAD—With prices still ranging from $5.55 to $6, according to grade, the market conditions remain unchanged from last week. There are fewer orders for lead to-day than there were a month ago. With the quietness of the market there are heard rumors of the association members coming together again, and if not advancing prices yet making the quotations more uniform.

RED LEAD—Demand is slightly more active. Orders are more frequent, but they call for small quantities. Prices are unchanged. Cask lots are $4.25 and 100-lb. packages $4.50 to $4.55.

PUTTY—Shipments are not so large as last week, but they are seasonably large. Country points are placing spasmodic orders for small supplies. The market is firm with quotations unchanged. Casks, $1.75; 100-lb. drums, $2; and bladders, $2.15 to $2.25.

PETROLEUM—The whole oil situation is unchanged. There was a slight flurry early in the week due to the lower prices for Standard Oil lines across the border, but no change has taken place here and the market has come together again. Pratt's astral is 17½c; water white, 15½c, and prime white, 13½c.

THE CHRISTMAS TRADE.

Writing on the subject of special trade lines for Christmas, the Oil and Color Trades Journal says: What is wanted above all is that the attention of the public is attractied and held by an original scheme of decoration, there shall be several new things which will force people to enter the shop-door. It is almost an axiom amongst good salesmen that once a potential customer is inside it is a comparatively easy matter to convert that person into an actual buyer of goods. With the male portion of the community this rule works almost invariably, for no man likes to leave a shop without purchasing something; and he will not do sc unless driven out by stupidity or want of tact. With the gentler half of humanity, however, the rule does not work quite so well, but for both men and women it is of the first importance that distinct and interesting novelties should be shown. Now is the time to consider what is likely to be attractive amongst the many new things which are constantly being brought befor the retailer by manufacturing firms; but if the matter be postponed for consideration in December, there will be little leisure to pick and choose and thus to have in readiness the best business-bringers amongst the novelties of the season.

It has been suggested that, where the thing is not impossible, a sepaeate counter should be set aside for novelties. Of course, this requires a comparatively large establishment; but, whenever it can be done, it is almost sure to pay well. The display is much easier and more effective in this way; and the attention of the buyer is fixed more completely; and wherever there is space, another feature for Christmas-time is well worth considering, viz., a counter with as great a variety of articles as possible at a uniform price. Human nature is a curious thing, or, to put it in the immortal words of Mr. Squeers, "She's a rum 'un, is Natur,"; and it is simply astonishing how many people have a distaste for inquiring the price of a thing. This distaste, in the man, is associated, no doubt, with his dislike of leaving a shop without purchasing something. He does not like to inquire the price lest it should be more than he wants to give; and hence he would be left in a delimma, either to buy at an inconvenient price or to go out without buying. The prosperity of the penny, threepenny, and sixpenny bazaars is based upon this feeling; and the legitimate retailer, if he be wise, will, where possible, make an effort to accommodate it. There is plenty of money spent at Christmas-time: people are in an expansive mood, and get many things then which they woul dnot buy at other times.

The up-to-date salesman reads and studies, just as men in other professions do.

. . . The stocks of the CANADA PAINT COMPANY are largest and most comprehensive of any in the Dominion of Canada. The country North, South, East or West can be served economically and expeditiously from our manufacturing plants in Montreal, Toronto or Winnipeg. We invite comparison with our advertising matter. A Seasonable Suggestion

It pays the paint dealer to watch the seasons and push the proper paint at the proper time. So much easier to sell what the people want **when they want it.** Just now **Floor Paint** is the proper paint to push — and right now, as for the past twenty-five years, there is no other floor paint that is so easy to sell, or that gives such universal satisfaction, as

IT'S MADE TO WALK ON

Senour's Floor Paint

IT STANDS THE WEAR

The same good words can be said of the entire **Martin-Senour Line of Paints for all Purposes.** There are no other paints so easy to sell at any time. But **Floor Paint** is acknowledged as the test of the paint-maker's skill. The exacting requirements of such a paint are so numerous and varied that the ordinary paint maker is at sea for a solution of them. We have solved the secret so successfully in **Senour's Floor Paint** and the sales on it have grown so enormously that we have been compelled to devote an entire plant to its manufacture exclusively.

This seasonable suggestion is for the dealer who wants to sell more paint. We have another suggestion that will put more paint profits in your pocket —write for it today.

Department of Railways and Canals

QUEBEC BRIDGE

TENDERS FOR SUBSTRUCTURE

NOTICE TO CONTRACTORS

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Bridge Substructure," will be received at this Office until 16 o'clock on Tuesday, the 30th of November, 1909, for the building of the Substructure of the Quebec Bridge.

The General Specification and form of tender will be ready about November 20th ; but in the meantime, Contractors are invited to visit the Office of the Quebec Bridge Board of Engineers, Canadian Express Building, Montreal, for the purpose of securing preliminary information to enable them to submit tenders for this work.

Parties tendering will be required to accept the fair wages Schedule prepared or to be prepared by the Department of Labor, which Schedule will form part of the contract.

Contractors are requested to bear in mind that tenders will not be considered, unless made strictly in accordance with the printed forms, and in the case of firms, unless there are attached the actual signatures, the nature of the occupation, and place of residence of each member of the firm.

An accepted bank cheque for the sum of $120,000 made payable to the order of the Minister of Railways and Canals must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work, at the rates stated in the offer submitted.

The cheque thus sent in will be returned to the respective contractors whose tenders are not accepted.

The lowest or any tender not necessarily accepted.

By order, L. K. JONES, Secretary.

Department of Railways and Canals,
Ottawa, 26th October, 1909.

Greening's Patent Cow Tie has been proved by the tests of time, wear and endurance to be the strongest on the market. Back of it is a reputation of a score of years. These Ties are of seven kinds and are made in six sizes.

We have a complete line of all sizes ready for shipment.

Insist on getting "Greening's" from your jobber.

MANUFACTURED BY

The B. GREENING WIRE CO., Ltd.

HAMILTON, ONT. MONTREAL, QUE. WINNIPEG, MAN.

"CANADIAN MONARCH" FENCE

Our "MONARCH" is a staple lock fence of the latest and most approved type. The strands have but a very slight kink at the lock, therefore are as strong at the lock as at any other point.

The locks, strands and stays are made of number nine wire and all the wire used is Hard Drawn Steel, thoroughly galvanized.

If you want an agency for this, also our "SAFE-LOCK" fence, which is a wrapped stay, either number nine or number twelve, write us for prices, and get our wholesale list of fences and gates with discounts.

THE OWEN SOUND WIRE FENCE CO., Limited

CURRENT MARKET QUOTATIONS.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

The Ross Sporting Rifle

A U. S. SPORTSMAN'S ESTIMATE

From all over the world come testimonials similar to the following—each an unqualified endorsement of the Ross Sporting Rifle:—

Uno M. Montin, Calumet, Mich., writes on April 12th, 1909,—

> "The Model E Sporter I ordered arrived yesterday. Allow me to compliment you on the excellent and superior finish all through. It is all up to my expectations. I consider it the best value in the shape of a sporting rifle I ever had for my money."

When sportsmen everywhere have this opinion of the Ross Rifle—men who are acquainted with all makes of fire-arms—isn't it more than likely **the demand in your own neighborhood** will increase?

ROSS RIFLE CO. - - QUEBEC

THE FLYER

PATENTED 1909

It means washing with the hard work left out

¶ A Big machine, Big in every way—Big in power, Big in speed, Big in ability to do the work, Big tub with a Big opening, Big seller.

Has simple, strong and accurately machined mechanism seated on steel ball-bearings. Is fitted with a large evenly balanced fly wheel that is easy to start and carries the action over its heaviest load with little effort. The entire working gear is attached to the cover and lifts easily with it. No troublesome connections to make.

THROW A SPRAT TO CATCH A MACKEREL

You can't fish without good bait.

It's not the cost of the bait, but the knowledge of just what bait to use to catch the kind of fish you are after.

A want ad. in HARDWARE AND METAL is the right kind of bait to use when you have any proposition of interest to Hardware, Stove and Tinware dealers, clerks or travellers.

The cost of advertisement will be very small compared with the results you will secure. 25c. or 50c. per insertion will pay for a want ad. which may prove worth dollars to you.

Every day you delay you are handicapping your business.

If it is a set of tinner's tools you have to sell, why not get them out of the way and get the money for them which you can use in your business?

If you want to sell your business, let the men know about it who would be interested in buying it, and you will realize a higher price than if you only negotiate with two or three people.

If your proposition has anything to do with the hardware trade, try a Want Ad. in HARDWARE AND METAL. Address our nearest office.

The Latest and Greatest

One or two Speed

"EASTLAKE"
METALLIC SHINGLES
BEST BY TEST

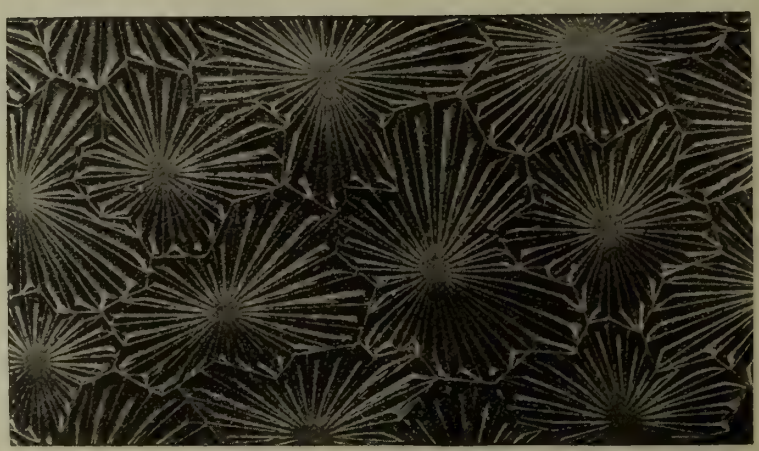
Make **all** your customers permanent ones—do not experiment; sell them goods that you **know** will give satisfaction—goods that have **proven** themselves.

25 years ago, after months of experimenting and designing by our experts, in deciding on just the right requirements, we began manufacturing "**Eastlake**" Steel Shingles. We have never changed the first design—in fact, time has shown that it could not be improved upon. We can show you roofs that were covered with "**Eastlake**" shingles the first year and are in perfect condition to-day. Is not this proof that we selected the right design and used the best material—a 25-year actual test proves them the best.

Tell your customers you know "**Eastlake**" shingles are the most satisfactory in every respect — fireproof, weatherproof, durable and easiest and quickest to lay. You are backed by the oldest and largest sheet metal building material firm in Canada—a firm that has always "protected the trade."

The same high quality material and manufacture has placed all our goods in the front rank. **Steel Ceilings and Walls, Siding, Lath, Cornices, Skylights, Ventilators, Finials, Conductor Pipe, Eavetrough,** and a complete line of Architectural Metallic Goods.

Look around you—go after those unsatisfactory roofs; send us measurements for estimates.



"To my mind AN ACTUAL TEST is much safer than one of those PAPER GUARANTEES that will not hold water."
—The Philosopher of Metal Town.

TORONTO LONDON WINNIPEG

IDEAL Carriage Heaters

The Ideal No, 1

The Petty No. 2

Did it ever occur to you why you never see an advertisement for Nails, Bar Iron, and such like? The reasons are many:

In the first place, every buyer knows that an up-to-date hardware store cannot be run successfully without such staples; another good reason is that if an advertisement costs anything it would be hard to get this cost out of such unprofitable goods, and, if a hardware dealer depended on such lines to pay his expenses, there would be more failures than there are to-day.

Successful merchants are always looking for something that will satisfy their customers and also pay them well for handling them.

Did you ever try to sell a **Carriage Heater?** If not send us a sample order, and you will then see how easy it is, and the person who buys it will wonder why they ever did without it, as it certainly fills a long-felt want.

Petty Coal is manufactured from best material all through, burns to a clear white ash, no waste or incombustible matter remains, it will not go out when most needed, it burns without smoke, odor or flame.

Ideal Heaters and Petty Coal Are Absolutely Guaranteed.

There Are the Best Kind of Profits for You in Handling the Disston Line

YOU know how it is yourself—you always buy again from a manufacturer who has proved the honesty of his goods. You are sure of this when you recommend a DISSTON SAW OR TOOL to a new customer—he'll come again to buy. Those dealers who begin trading with DISSTON stay with DISSTON, so that now the DISSTON PLANT (the largest saw-making plant in the world) covers 50 acres. Just so surely will your business grow, and your profits increase by handling the same product that DISSTON handles—DISSTON Saws (the saw you see from sea to sea) and DISSTON Tools and Files.

FREE A postal will bring you the latest DISSTON catalogue, beautifully illustrated. It may be the means of increasing your profits.

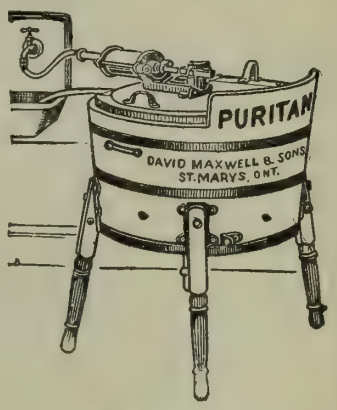
Corner King Street and Spadina Avenue

Toronto

"Maxwell" Hardware Specialties



are known and appreciated in thousands of homes throughout Canada. Dealers find them active, steady sellers, particularly as new and improved types are continually being brought out. The latest is the

"Champion High Speed" Washer

This is really a "Puritan" tub and reaching dolly with a new "momentum" driving mechanism. Working the upright lever starts the dolly and also the heavy balance wheel, which revolves several times for every stroke of the lever. The momentum of this heavy wheel keeps the machine running smoothly and makes the "Champion" very quick and easy working.

The "Puritan" Motor Washer

takes all the work out of wash-day. Tap water runs it, in nearly every case at no expense to the user. The motor is simply, strongly made, and is far less liable to get out of order than other water motors. Works on a pressure of 35 pounds up.

The "Blue Belle" Washer

is a new machine of the "rubber" type. While the tub revolves in one direction the upper board turns the opposite way, making the machine wash very rapidly.

The "Blue Belle" Wringer

has no equal either in Canadian or imported machines. Has ball bearings, enclosed gears, swivel tub attachment, five year guaranteed rolls, and is extra well finished.

The New "Royal Mangle"

is a thoroughly up-to-date machine, which we have recently placed on the market. Splendidly made throughout and highly finished. A most useful machine in any family, boarding houses and hotels.

Write for prices and full information about our Churns, Lawn Mowers, Wheelbarrows, etc.

Sell Clark Heaters and Coal

Here's the "BIG HIT" Assortment

2 Leader Heaters
2 No. 5B Heaters
2 No. 7D Heaters

6 Dozen Clark Fuel Brickettes (Best Grade)

Some of these heaters you can sell as low as $1.20 and make a good profit.

The Proposition to Dealers is Mighty Interesting

Its a proposition that means ready sales and liberal profits.

Everyone who drives or owns a carriage, wagon, sleigh, automobile—any kind of vehicle—needs them. Everybody traveling in cold weather needs them. The need is known—the demand is positive—It's for the dealer to supply the product and pocket the profits.

Clark Heaters and Clark Coal sell wherever displayed. The wonderful compactness, the unique principe of heat distribution, the neat appearance, the low price—all are factors that make Clark Heaters the unchallenged leaders.

Our guarantee goes with each, and the guarantee protects the dealer and the consumer.

And the coal is just such another proposition. To **prove conclusively** that it's better than other fuel, we give a guarantee, **with each brickette,** that it will give 25 per cent more heat than any other heater fuel made.

DEALERS——ACT NOW

The season is on. Send for the "Big Hit" assortment and add more dollars to your profit. Send to your jobber. Put a heater just inside your store—where customers can **feel** the goodness of it. "Warm them up" to the necessity of buying from **you.** We'll help.

No. 60 Breast Drill

Manufactured by

Ryall Tool Company, Montreal, Canada

RYALL TOOL CO. Breast Drill is carefully designed and proportioned, durable, easy working and strong.

FRAME—Finished in black and yellow enamel.

HANDLES—Polished Hardwood.

BREAST PLATE—Adjustable to any position.

GEARS—All gear teeth cut from solid metal, and the small pinions from rolled steel bars. Double gears equalize the bearing.

CHUCK—Nickel-plated, three-jawed chuck with knurled sleeve, holding round straight shank drills No. O-½ in. in diameter.

LEVEL—Is set in perfect alignment with the chuck and handle, which enables the drill to be held true. It is set in solid iron where it can be seen while in use, and is protected from all but intentional injury.

SPEEDS—Two speeds, one approximately three times faster than the other, readily changed to fast or slow by turning the knurled nut on the frame marked "F" and "S", at the same time turning the large gear slowly so the clutch may drop in.

SPINDLE—Runs in case-hardened, anti-friction cone bearing.

Length: 16 inches over all. Weight: - 61 lbs. per doz.
Packed one drill only in a linen reinforced cardboard box.

HOLIDAY PRIZE COMPE-TITIONS

SIX PRIZES FOR WINDOW DISPLAYS

For the three best selling window displays shown in a city over 10,000 population, and for the three best in towns and villages under 10,000 population.

In each division there will be three prizes as follows: 1st, $5 in cash; 2nd, and 3rd, copies of "Hardware Window Dressing" (cloth bound) $2.50—making in all six prizes, totaling in value to $20.

To enter the contest send a clear photo of one or more Christmas windows, made up of articles usually sold in hardware stores, with a description and the name of the person who arranged the display. Photos must be mailed to us by December 31.

TWO PRIZES FOR HOLIDAY ADS.

Two prizes of $5 each are offered for the best newspaper advertisements about Christmas goods, such as cutlery, silverware, sporting goods, lamps, stoves, carpet sweepers, household goods or other holiday lines. Forward one or more clippings from your local paper to us, with the name of the writer of the advertisement, and the name of the paper it was clipped from. As in the window competition, a division is made, one prize being open to those in cities over 10,000 population, and another to those in smaller places.

With the ad. send a copy of any booklet issued, and a description of any special selling plans or display features used during the holiday season.

The awards will be made by experts, and will be announced, with reproductions of the prize ad, and windows, shortly after the close of the contest. All entries should be mailed not later than December 31.

EVERY IMPERIAL OXFORD RANGE YOU SELL PROCLAIMS YOURS AS A QUALITY STORE

"An Enviable Reputation"

IMPERIAL OXFORD WITH RESERVOIR AND HIGH CLOSET

That's just what every ambitious merchant desires—the confidence of his trade, and what surer method than in dispensing quality—a needful factor, a positive necessity towards stove satisfaction. So with this preliminary we again bring to your notice the "Imperial-Oxford" Range. Words are hard to get—the kind that best express the qualities that this range possesses.

If you are a Gurney-Oxford dealer, then we are of one mind—enthusiastically so. To you, Mr. Merchant, who may not know this range—then for your reputation's sake—your bank account's sake—aye—even for your health's sake—ask us to prove why it will best suit your trade—why it will mean quicker and more permanent sales—and lastly, why there's less worry and much benefit to the dealer who sells the Gurney-Oxford Lines.

Don't you want to know the answer to all this? We want to tell you.

Woodstock, Ontario

Western Warehouse: 132-4 Portage Ave. East, Winnipeg, Manitoba

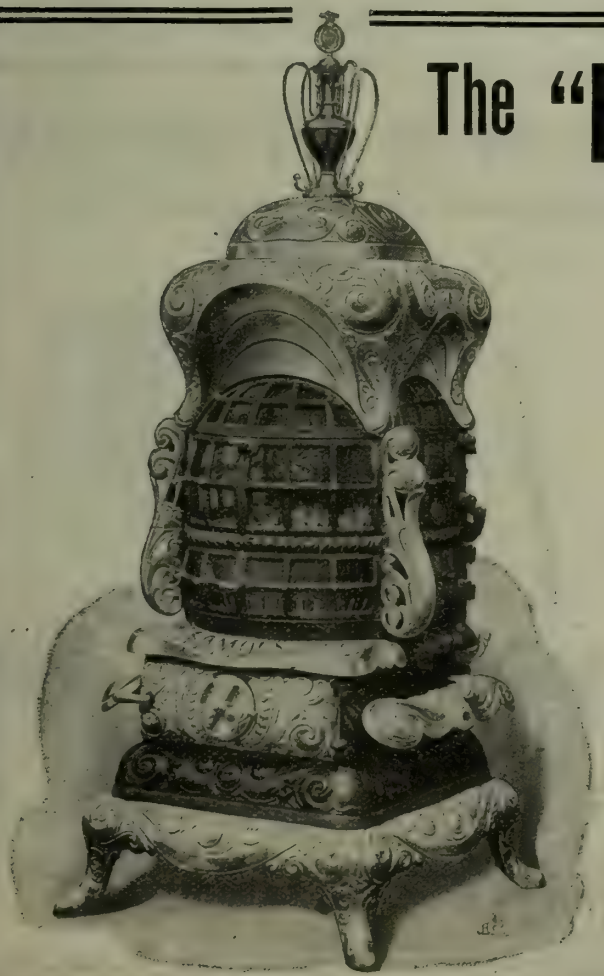
DAVIDSON'S
"Premier Marathon"
STEEL RANGE

IS NOW A LEADER on account of its proved perfection and neat appearance

We have used heavier gauge steel than usual in making the body of this range.

Special attention has also been paid to adapting the fire box for wood as well as coal and it will take comfortably a 28-inch stick.

The New Duplex Draft with which every "Premier Marathon" is fitted assures perfect combustion at both ends of the fire box.



This range has many other desirable features and the number of repeat orders received plainly show that the criticising public have found them satisfactory.

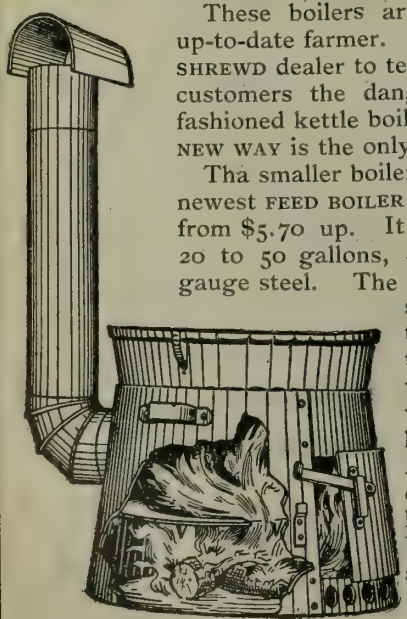
"JEWEL" STOVES and RANGES

The Ideal Jewel Heater With Its New 1909 Dress



Dress does not make the man, neither does it make the stove, but it certainly improves the appearance of both man and stove.
The Ideal Jewel has been on the market for a number of years and proved itself a Perfect Heater in every way. Now, that it has been redressed, it is one of the handsomest and most thoroughly reliable heating stoves on the market.
Mr. Stove Dealer—If you expect your full share of the fall trade you must keep your stock up-to-date. The Ideal has every modern improvement known to the stove trade. With or without oven.

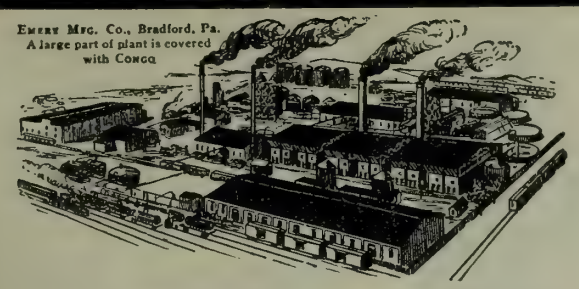
Manufactured by

The Burrow, Stewart & Milne Co., LIMITED

Hamilton, Canada

Two Real Farmer's Friends

These boilers are necessities for every up-to-date farmer. It will be easy for the SHREWD dealer to tell his farmer friends and customers the danger of having an old-fashioned kettle boiling in the yard. The NEW WAY is the only SAFE WAY.



Tha smaller boiler, the RUHMANN, is the newest FEED BOILER on the market, and sells from $5.70 up. It has a capacity of from 20 to 50 gallons, and sells on sight. 12 gauge steel. The LARGE boiler is a sure seller, too. It is just what the farmers need, and at this time of the year it will attract. It will boil water in 20 minutes. We have different weights. Approximate weight of of this size, No. 25, 225 lbs. ; of No. 30, 311 lbs. We have 25-gallon pots also, weight, 51 lbs.

A large part of plant is covered with Congo

CONGO NEVER LEAK ROOFING

THE GUARANTEED ROOFING

One of the most attractive features about Congo is that you get a genuine Surety Bond with EVERY ROLL. This Bond is issued by the National Surety Company. EVERY roll of 3-ply Congo is guaranteed for a period of TEN YEARS if printed directions are followed.

Thus the buyer is protected for a long time by the strongest guarantee ever i sued, backed by a Surety Company whose bond is as good as the Government's.

That Congo is made of the right stuff durab.e and lasting, is attested to by the fact that the Surety Company was willing to back it, and for so long a period.

Congo is really a better purchase than ever before.

In addition to the Surety Bond, we furnish with every roll GALVANIZED CAPS, instead of the tin caps or nails supplied by others The galvanized caps can't rust or bend or break. Liquid cement is also furnished free.

We mean to get the roofing trade of the country and think these SPECIAL FEATURES will come pretty near landing it.

Send to-day for free Sample of Congo and a copy of the Guarantee Bond.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, munufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

VALUE OF GOOD COPY

Personally, I believe "ads." in trade papers should be made so attractive, so interesting in some way that the merchant as he glances through the trade journal will stop and see what you have to say. The simple announcement that you are in business is not enough. I don't care how prominent a firm is, they should not get the idea they are so big that all they need to do is to reproduce their name on a page in a trade journal and say nothing more. They should do something to make the merchant curious; in fact, somewhat anxious to meet the travelling man you are sending out to represent you.

PLYMOUTH ROPE

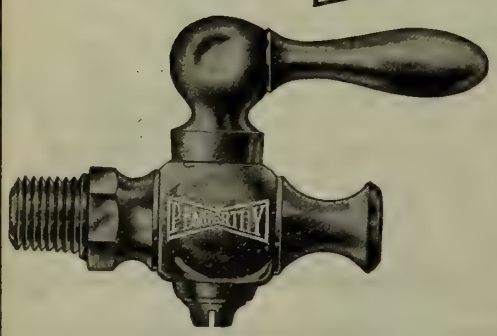
MADE BY

PLYMOUTH CORDAGE CO ---- PLYMOUTH—WELLAND

¶ A Satisfied Customer is the best advertisement you could possibly have ; therefore you should give each customer the best value for his money.

¶ This, in the case of rope, does not mean the greatest number of pounds for a certain sum, but rather the greatest length, together with the necessary strength and durability.

¶ **PLYMOUTH** rope is made with this end in view. Costs a little more per pound but will be found cheaper in the end and much more satisfactory. Quality in rope is economy.



¶ The successful dealer appreciates the above facts and demonstrates them to his customers.

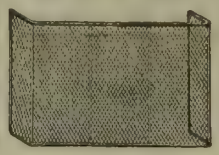
Branches Throughout the United States

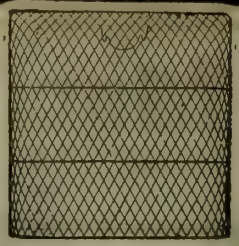
SIMONDS No. 8½

This Saw is of the general style and shape which carpenters have been accustomed to using for years past. Has a carved apple handle with highly polished sides and edges, making a very pretty Saw. Holds its cutting edge and saws true. Its high quality and even temper are due to the fact that it is **Made of Simonds Steel.** Covered by the broadest Simonds warranty.



A Great Selling Team

¶ Buyers must be moved through several steps to be brought to the buying point.



¶ They must have their attention attracted to the article. They must have their interest in it awakened. They must be informed as to its nature, utility and merits. They must be convinced of its value. They must be moved to action—to closing.

¶ Good salesmen and good trade-paper advertising make a great team to carry the buyer through these several stages to the buying point. Alone, the salesman is at a disadvantage.

Montreal and Toronto Travelers' Nominations

Presidents of Both Associations Re-elected—Not Many Contests in Sight—Few Hardware Travelers in the Race for Office—Preparations Being Made for Annual Meetings and Banquets—Big Increase in Membership.

THE MONTREAL MEETING.

Montreal, Nov. 17.—Samuel J. Mathewson was re-elected president of the Dominion Commercial Travelers' Association at a general meeting held in Montreal on Saturday evening last.

Other officers were re-elected as follows:—Vice-president, J. Bevans Giles; Treasurer, Max. Murdock. Five retiring directors were replaced by E. Daoust, A. M. Ellicott, J. A. Dawson (re-elected), Luke F. Moore and Bruno Trudel. No ballot had to be taken.

A good attendance made the meeting an interesting one, and it was announced that the membership had increased to 6,500, a gain of 425 over last year.

As usual, a banquet will be held in December, at a date to be decided upon at a special meeting. The committee appointed to make arrangements consists of W. J. Egan, chairman; D. M. Lefebvre, S. Woods, R. O. Watkins, J. B. Giles, Armand Chaput, E. Daoust, A. M. Ellicott, J. A. Dawson, Luke F. Moore, Bruno Trudel, J. T. Dwyer, F. S. Cote, Max. Murdock, C. Petrie, R. Langelier, I. Wotherspoon and P. H. Burns.

December 11 was the date decided upon for the annual meeting, which will be held at the Windsor.

Samuel J. Mathewson's re-election to the presidency will be a matter of general rejoicing. Under his management the association has made excellent progress during the past year, as the large increase in membership alone should testify. He is a practical worker, whose experience on the road leaves him in possession of the problems the commercial traveler has to overcome. Nothing is too good for the salesman, in his opinion.

"Bev." Giles is another favorite official, and an indefatigable worker, while Max. Murdock is everybody's friend.

MEETING AT TORONTO.

Toronto, November 17.—The Commercial Travelers' Association of Canada held their annual nominations for officers for the coming year, on Saturday, November 13. The president, John Gibson, was in the chair. Before calling for nominations he congratulated the meeting on the continued prosperity of the association and intimated that the current year was one of the best in its existence.

The president, John Gibson; 1st vice-president, Robert Gemmell, and 2nd vice-president, S. M. Sterling, were re-elected by acclamation. The only contest for office is that of E. Fielding and John H. Kenny for treasurer. Mr. Fielding is the present incumbent, and has held the office since 1904, when he led in the fight to retain the maximum mortuary benefit at $1,000 against the claims of several actuaries that the association should reduce the amount to be paid to members of ten years standing. Mr. Fielding, speaking at the nomination meeting, said that the claim he then set up had been verified in every particular, quoting figures in support of his contention. He also showed the amount of present liability, the number of members, and the cash reserve. The latter has increased by 51 per cent. and the liability by 21 per cent. during the past five years.

ADAM TAYLOR, GUELPH,
Again Re-elected Vice-President of the Guelph Board.

The other nominations were as follows:—

Directors for Toronto board—James G. Cane, H. B. Ellis, J. H. Lumbers, W. J. Micks, W. H. Scott, C. A. E. Colwell, W. M. Fielding, George W. Moore, M. Matthews, C. J. Tuthill, J. W. Charles, P. M. Goff, W. R. Mosey, D. H. MacKay, J. H. Wildfong, Alexander Cook, R. G. Hector, Anthony Mitchell, A. C. Rogers; nine to be elected.

Hamilton board—1st vice-president, E. J. Fenwick; 2nd vice-president, John Stoneman, elected by acclamation. Directors—George M. McGregor, H. G. Wright, C. C. Smye, E. O. Zimmerman, P. A. Sommerville. Six directors are to be elected.

Berlin board—Fred Doering and W. J. Moody, directors, elected by acclamation.

Kingston board—W. H. Graham and W. S. R. Murch, directors, elected by acclamation.

Guelph board—Adam Taylor, vice-president; one director to be elected.

Brantford board—J. S. Hamilton and D. J. Waterous, directors, elected by acclamation.

Montreal board—S. O. Shorey, vice-president, elected by acclamation; Wm. Cauldwell and D. Adair, directors, one to be elected.

Winnipeg board—H. Miller, vice-president; A. C. Merrett, director, elected by acclamation.

Vancouver board—Fred Buscombe and Robert Stewart, directors, elected by acclamation.

Ottawa board—John Everett, director, elected by acclamation.

Brockville board—J. W. Hooke, director, elected by acclamation.

The following were elected scrutineers of the ballot—H. Clearihue, Robert Keyes, and Walter Madill.

The ballots are being distributed this week and the election will close at noon on Monday, December 20. The result will be made known at the annual meeting, to be held in St. George's Hall on Thursday, December 23. A meeting of the executive will be held on Saturday next to decide upon the time and place of the annual banquet.

M. Matthews, traveler for the Canada Metal Co., is the only representative of the hardware and metal trades nominated for the Toronto board.

The Hamilton directorate has three hardware nominees, W. H. Dean, of Wood, Vallance & Co.; A. F. Hatch, of the Canada Steel Goods Co., and H. G. Wright, of E. T. Wright & Co.

Adam Taylor, of the Taylor-Forbes Co., Guelph, has again been elected vice-president of the Guelph board and H. Miller, of the Miller-Morse Co., Winnipeg, as vice-president of the Winnipeg board.

A TIMELY TIP.

When the fodder's in the silo,
And the oats are in the bin;
When the farmer sits and chuckles
As he sees the corn roll in,
Then its time to dust the ledger,
Figure up his year's account;
Hit him quick, while he is laughing,
He will pay the whole amount.

Business Methods of Canadian Hardwaremen

Pioneer Storekeeping in Saskatchewan—Early Closing Movement at Kingston—Chatham Merchant Uses a Sticker on Parcels—Keep the Silverware Bright—Barn Paint and Lost Opportunities.

PIONEER STORE KEEPING.

Davidson, Sask., Nov. 15—J. R. Ward, of Saskatoon, was in town Tuesday and Wednesday, and in an interview stated that he and Louie Kiel, both former Davidson boys, were about to open up business on the Goose Lake Line about 20 miles northeast of Kindersly. At present there is nothing but the town site and a pair of steel rails running through, and on which the construction gang is still at work. However, the boys think they see ahead of them a future town of no small size, and are seizing the opportunity of getting in on the ground floor. It is the intention of Mr. Ward to open up a general store, while Mr. Keil will branch out in the hardware line. Until such time as they can get separate buildings erected the two gentlemen will open up their stock jointly under canvas. Mr. Ward has arranged for an immediate shipment of stock and lumber to his proposed new place of business, and left here himself for the Goose Lake country on Wednesday's train.

SHOULD USE MORE BARN PAINT.

Chatham, November 9.—"There is room for more enterprise in pushing a cheap barn paint in Canada. Less than five per cent. of the farmers' barns are painted."

The foregoing was the comment voiced in this city recently by an Ohio man who, in the course of business, recently visited Kent county, indicating that possibly paint manufacturers and hardwaremen are missing an excellent opportunity to add to their revenues.

While the unpainted barn does not strike the average Canadian as in the least out of the way, it was speedily noticed by a man hailing from a section of another country where painted barns are the rule rather than the exception. And, if Ohio farmers buy paint for their barns, why cannot Canadian farmers be induced to do likewise?

A small but progressive section of the farming community are already painting their barns; and that more are not doing likewise is probably due to the fact that barn paint and its value have not been featured as they should. No great distinction has been made either by manufacturers or retailers between barn paint and house paint, nor has any energetic or systematic advertising campaign been made to educate farmers on the subject of barn painting.

There are a host of reasons why the farmer should paint his barns, and with the steadily increasing price of lumber, these reasons grow stronger every day. The trouble largely is, however, that paint has been pushed from the aesthetic rather than the practical point of view. People have painted their houses in order to add to their attractiveness, and have looked upon the barn, from a scenic point of view, as something that no amount of paint can redeem.

The value of paint as a preservative is the strong point which retailers and manufacturers can urge. If the use of $40 worth of paint will extend the natural life of a barn three or four years, then the $40 is money well invested. As a matter of fact, the use of paint will extend the life of the barn to a far greater extent. And, with the price of lumber steadily going up, the returns from the use of paint promise to be even greater than the present cost of the barn would indicate.

Of course, the improvement to the looks of the barn can also be urged. But from the farmer's point of view, the practical and money saving side of the question will be most appealing.

ANOTHER CHRISTMAS WINDOW.

Fredericton, N.B., November 16.—R. Chestnut & Sons, Fredericton, who have a fine hardware store in this city, are great believers in using their windows for advertising purposes, especially in the holiday season.

Holiday Window at Fredericton.

During Christmas week a year ago two of their window displays, dressed by Fred Melick, attracted a lot of attention, one of them being shown in the small engraving reproduced herewith. It was arranged, as will be seen, in the form of a crown resting on a base, in the centre of the crown being a star. Silver-plated spoons, pocket knives and small scissors were used in constructing the crown and star, underneath being table cutlery, pearl-handled fruit knives, nut crackers, teapots, thermometers, watches, etc., while on the base of the window were carving sets in cases and a stand on which small nickeled and brass bells were hung. Price tickets were used wherever possible, and the windows were made bright as day by the use of acetylene lights, people coming from all parts of the town to see the displays.

Similar displays will be made this year and readers of Hardware and Metal can look for even better examples of the window trimmers' art.

EARLY CLOSING MOVEMENT.

Kingston, November 16.—The movement set on foot some months ago, for the early closing of all the stores, at 9 o'clock on Saturday nights, has failed. The agitation was brought about by the members of the different young people's societies of the churches, which is composed for the most part, of clerks. At a big rally of the societies, the early closing movement was made the one topic of discussion, and a resolution was passed, asking that the executive meet with the retail merchants' association. The conference was held, and the merchants urged that if early closing was desired, that a petition be sent around among the merchants, and then sent on to the city council. The petition was circulated, but it was met with such strong opposition, that it was not considered advisable to press the matter. The members of the societies, however, say that they are not at all discouraged at the result, and that they will, some time in the near future, again bring up the matter. They do not believe that their work has been wasted.

Most of the stores now close at 10 o'clock on Saturday night, but the hour aimed at by the young people was to have them closed at nine. Hardware merchants would not find this at all satisfactory to them, as at that hour, the streets are lined with people who have been out shopping, and attending the theatres, and while the sales might not be very large there is the chance for advertising, and they believe firmly in the old slogan, "Advertising is the life of trade."

The strong argument put forth by those agitating for the early closing is that it will be the means of having a much larger attendance at the church services on the Sunday morning, but there are many merchants who take a strong objection to this argument, and say that there is nothing to it at all.

"It is absurd to think that it will help along the church attendance," remarked one merchant to your correspondent. "I am kept at my store sometimes until nearly midnight, and I can always be at church in the morning. I do not think that the late hour has anything to do with it. If a person wants to go to church in the morning, he will get up and go. Church does not open until 11 a.m. and I think that this gives a person ample time for sleep."

E. G. B.

JUST PASTE A STICKER.

Chatham, November 16.—The expression introduced by a popular show some years ago, "Just Paste a Sticker," may have had something to do with the inception of an advertising scheme, adaptable to almost any line of business, which has recently been utilized by S. F. Park & Co., druggists, of this city. The main feature of this scheme is the constant reiteration, in every branch of the firm's advertising campaign, of a catchy phrase consisting of just four simple words: "Get it at Parks'." In the firm's newspaper advertisements, in place of having the name set up in ordinary type, a two column cut was used with the mystic words neatly engraved in plain, clear script. Here, as elsewhere, they are supplemented by a statement of the business location, in smaller type: "2 Doors East of Market."

Neat stickers with the same words in white script upon a colored background are pasted upon parcels sent out from the store. A rubber stamp with the same words is also used for a similar purpose. Practically every parcel going out from the place of business is thus stamped. Formerly blue was the color used for the stickers; but this has been superseded by a striking red.

In this connection the firm makes good use of the advertising literature supplied by manufacturers and wholesalers in the way of booklets, circulars, etc., every piece of this literature placed upon the counter bearing the familiar "sticker." The expression also apears on all bill heads, letter heads and envelopes in place of the firm name. Finally, the words "Get it at Parks'" in big white script for a long time adorned a large, black sign placed on the roof of the store. This, at night, was illuminated by incandescent bulbs, attracting much attention.

The "catchwords" seem to have caught on, and have from all accounts proven of very material assistance in the firm's business growth.

V. L.

SEEK AID FROM GOVERNMENT.

Ottawa, Nov. 17.—The Ottawa Retail Grocers' Association will go after the peddlers and hawkers this year with greater effort. The action taken last year by the organization came a little late in the year and therefore no bill was brought up in the provincial legislature as had been proposed. This late start was mostly due to the organization waiting for the other trades to join them, particularly the dry goods, which is asking for a law restricting transient traders.

The grocers have now decided to go on without them and only take up the question of hawkers and peddlers. It will be necessary to get a bill through the provincial legislature to enable the city council to pass any by-law which would help the grocers. The great complaint is that the peddlers pay no taxes into the city and the license is so small that it does not count. Yet they are able to compete against merchants paying heavy taxes and rents. N. O.

VANCOUVER "CARTOON" WINDOW.

Vancouver, November 12.—The accompanying illustration shows a Thanksgiving window trimmed by W. H. Jeffery, salesman and window dresser for McLachlan Bros., 131 Hastings St. West, Vancouver. It being in the form af a local hit on a live topic of general conversation in Vancouver a month ago, when the citizens voted favorably on a by-law appropriating $900,000 to construct new bridges. The city already has two bridges and a Second Narrows bridge is now proposed.

The background was painted to represent the Narrows of Burrard Inlet. The bridge built entirely of hardware, was crossed and recrossed by a train operated by electricity. The screw jacks forming the four pillars of bridge were surmounted by amber colored globes which were alight at night. The centre of window bottom was made of mirror plate representing water on which plied small sail boats. On either side of the water the sandy shores appeared, and stretching beyond, lay the green fields. Potted ferns, and Egyptian cherry trees loaded with fruit, with shocks of corn here and there, added to the beauty of the landscape. Melon vines bearing melons were in abundance. Some Mexican jumping beans which the trimmer imported, attracted much attention as they tried to mount the walls of their corral. Unfortunately they cannot be seen in photo as they are placed behind a shock of corn stocks. Two moons in the sky were intended to fulfill the prophecy of many pessimists who have long said that the two cities of North Vancouver and Vancouver proper, would never be so joined before such a phenomenal occurrence as this had transpired.

Similar cartoon windows from time to time are making McLachlan Bros. widely known in the fast growing City of Vancouver.

D. J.

Novel "Cartoon" Window Shown in a Vancouver Hardware Store.

POLISH THE SILVERWARE.

Brantford, November 17.—Very often when a customer enters a hardware store to buy something in the silverware line, they are handed as a sample an article which from the appearance has not been cleaned since it was first placed in stock, the tarnish taking away its appearance of newness and brightness which is so captivating to the eye and the purse. Every hardware store keeps in stock some reliable metal polish, and a few minutes of the spare time of one clerk every day would give silverware an entirely different appearance. Keep the silverware bright.

A. W.

DISPLAY OF WORKING GLOVES.

Chatham, November 16.—A rather effective window display of working gloves, such as are used for corn husking, was put on last week by Westman Bros. A small corner window, about 4 feet square was used. The bottom of the window was covered with gloves, neatly arranged. The back of the window and the side were hung with gloves, while gloves were suspended very thickly from the ceiling. Practically every style was shown, and the large quantity used made the display rather impressive.

USE PRICE TICKETS FREELY.

An important factor in making the holiday season trade a success is in preparing to handle customers as speedily as possible and have the goods sell themselves when they can be made do so. And to this end there is nothing betten than the liberal use of price tickets both in the window and on goods in the store.

Every store, of course, uses some price tickets, but few use them as liberally as they might. If pricing goods is a good policy for the five and ten cent stores, it ought to be equally profitable in hardware stores, into whose business the "syndicate" stores cut most freely.

The purpose of price tickets is to interest people in other goods than they had intended purchasing when they entered the store. And following this idea out it can safely be considered that until shoppers can tell the price of every small seasonable or household article without asking the price, enough price tickets have not been used.

The average buyer of holiday gifts likes to look around and fix his or her ideas on some gift before asking a clerk for assistance. Encourage them in this by making it possible for them to pick out the kind of a present they want to give and then use salesmanship in selling the article selected or something which the judgment of the clerk suggests as a better gift.

In a store where goods are not price-marked, it frequently happens that a customer sees an article which he fancies. He examines it and in a few minutes he knows everything about it but the price, for it is not marked. As yet the decision to buy is not strong enough to induce him to ask the price, so he lets it go. A possible sale has been lost.

Customers will invariably go to a counter where goods are displayed with a price on them. They see a sign, "Anything on this counter for ten cents," and immediately they want to see what they can get for ten cents. Often they will pick up articles and sell it to themselves without any effort on the salesman's part. It is the price card, mostly, which is responsible for the sale.

LACK OF ADEQUATE HELP.

All merchants, if they stop to think, realize the necessity of having sufficient assistance behind the counter. As the Christmas season approaches this necessity becomes more apparent although during the year and especially on Saturday nights the trouble and loss caused by inadequate help is quite easily recognizable.

Frequently one hears complaints from customers that they can never get waited upon promptly in some stores; nothing will tend to destroy the trade of a merchant quicker than to have some person tell this a few times. It spreads rapidly and very soon customers begin to drop off.

Prompt service is required above almost everything. If a merchant and the salesmen he employs cannot serve those who want to purchase from him without five or ten minutes delay, then he should increase his staff. If Saturday is a busy day he should secure an extra salesman or saleslady. Never allow a customer or even a transient purchaser to go away with the story that he cannot get waited on promptly in your store. Show him that you are interested the moment he enters and see to it that his wants are supplied without delay.

With Christmas only a month away make your plans for increasing your staff so that it will be efficient in catering to the wants of those who are purchasers of your produce.

CLASSIFY PROFITS AND LOSSES.

Failure to classify profits and losses according to the various departments of a retail business is often responsible for a smaller net balance at the end of the year than might otherwise be secured. Such a classification need not be very elaborate, but it should be carefully planned and accurately carried out.

An exchange instances the case of a hardware merchant who, in addition to a general line of shelf hardware goods, is carrying more or less in the way of agricultural implements, housefurnishings, sporting goods, and a line of paints and varnishes. Unless he has adopted a system of properly departmentising his accounts, he cannot tell for the life of him what percentage of his profits has come from each of these kinds of goods. In fact, he may be actually losing money on one department and making an excellent percentage on another.

Merchants whose books are kept in such a way as to show the profits or losses from each branch of their business know what a satisfaction such figures are. If it is known that the silverware and cutlery department is proving profitable, for instance, the suggestion that it pays to push these goods is naturally followed by more sales and bigger profits another year. It may be that the merchant could make some sort of a rough guess at these profits without the figures; but there is much greater satisfaction and safety in knowledge.

It isn't necessary that a merchant should be an expert bookkeeper to departmentise his accounts. If he doesn't care to work out a system himself, a few dollars spent for a set of books especially planned for retail hardware accounts, would be an excellent expenditure; and the time required to keep these books, once a start is made, would probably prove to be little or no more than that formerly spent in puzzling over less up-to-date forms of accounts.

THE NEED OF ADVERTISING.

Merchants throughout the country must not be misled by statements that mail-order houses are not looking out for trade in the communities in which they are doing business. The following quotation from the Palmerston (Ont.) Spectator, indicates the policy of these houses :

> A representative of the T. Eaton Co., was in Palmerston last week looking after the local customers of that big institution. He had a list of names of the T. Eaton patrons and made a personal call for the purpose of soliciting orders and stimulating trade. If the country merchants are not going to be wiped off the map, they must arouse themselves, from their lethargic condition and grapple with problems confronting them. There are ways and means of meeting the departmental store baits, but there are few country merchants who appear capable of successfully coping with the situation.

This serves to show the necessity of merchants paying more attention to the advertising of their stores and goods. They should point out through their advertising and conversations just how much a consumer loses by sending for certain goods to the mail-order houses, as such arguments cannot fail to be convincing.

EFFECT OF STEEL MERGER ON BUSINESS.

It cannot be said that the consolidation of the Dominion Iron and Steel and Dominion Coal Corporations, announced on Monday after the completion of the sale of 50,000 shares owned by James Ross, president of the Coal Company to a Toronto syndicate holding strong interests in the Steel Company, caused much surprise in the iron and steel world. For some considerable time rumors have been circulating as to the probability of such a deal, and a reference to this effect was recently made in Hardware and Metal. There is no doubt that with interests so closely allied, a merger was the natural outcome for the two corporations.

The recent historic trouble between the two companies showed how essential it was that the corporation should work together, and that there should be no danger of any further trouble similar to that which had occurred. The Coal Company had given birth to the Iron and Steel Company, but in the course of time it was apparent that the latter should assume control of the former. A great development is going on in the younger company. Recent information given in Hardware and Metal showed that great extensions and improvements are contemplated at Sydney, in the erection of ovens, furnaces, mills, etc. Exporting produce to all parts of the world, it was necessary that an undisturbed coal supply should be secured once and for all, and this has now been done.

Mr. Ross has sold his 50,000 shares at $95, giving him $4,750,000, and transferring the control of the Coal Company to Iron and Steel interests, represented by E. R. Wood, Toronto, Col. Sir Henry Pellatt, Toronto, and C. J. McCuaig, Montreal. A large number of the other shareholders have signified their intention of holding their securities and going into the merger, so there is thus brought into being one of the greatest industrial enterprises in the country. The combined bond and stock capitalization of the two companies is about $57,000,000, and thus some nature of the deal can be estimated by outsiders.

So far as the effect upon the iron and steel trade is concerned, merchants generally do not anticipate much difference. It is not as though the merger was one of two iron and steel interests, and although the control of its coal will strengthen the Dominion Iron and Steel it will not bring about any revolution in the iron and steel trade, and the merger is regarded very quietly by the interests affected in an indirect way. "It is a very good thing for the Iron and Steel Company and that is all," said a prominent merchant, and that is about the general verdict.

The opinion among Toronto metal men seems to incline to the view that the merger is a stock proposition pure and simple, and that it in no way affects the metal business of the country. In support of their contention they state that none of the names of those mentioned in connection with the deal are iron, or steel, or metal men, but are rather financiers. If there was a linking up of two or more iron or steel industries then the question of metal prices might be discussed, but as it stands the effect on the market for metals in Canada is only an indirect one, and but simplifies the system of business of one of the big iron and steel concerns of the country.

Hardwaremen, too, see only an indirect result on the market situation. There certainly will not be lower prices because of the merger, and almost as certainly there will be no increases, though the merging together of the coal and iron interests naturally indicates that a stronger and a firmer feeling will develop. Not of itself will the merger affect the business world, but only because it is one more link in the chain which for the past several months has been growing, and as it grows strengthens the market as it affects hardware lines and metals. First there was the return of confidence in the business outlook, followed by the increase of orders; the reopening of industries; the impetus to building; the further stretching out of the railways—all of them making demands, enormous demands, on the metal plants everywhere, and as the chain kept growing longer, stocks grew less—until one by one the manufactured iron and steel lines increased in price.

Naturally, therefore, a crop of rumors relating to the ultimate merging of other Canadian concerns has sprung into being. One report gives the consolidation of the Dominion Iron and Coal, or what it may be called, the Soo Corporation, and the N.S. Steel. Here would be a vast merger—a paid up capital of over $89,000,000 and a bonded indebtedness of some $31,000,000—A second U. S. Steel Corporation. Such a merger may come one of these days, but not at present. No authorization for any such mergers can be found, and they all must be put down to pure street talk.

T. J. Drummond, president of the Lake Superior Corporation, interviewed on the subject of any probable merger, said that there was no truth in any of the rumors concerning the Soo Corporation or its subsidiary companies. They were not thinking of any merger. "The Lake Superior Corporation is giving its attention to operating its own plants in the best interests of its shareholders, and is at present also carrying forward a plan of improvements and extensions mainly in connection with its iron and steel industries. During this and next year something like $5,000,000 will be spent in balancing up and extending the various plants." Mr. Drummond referred to the improvements going on at the Soo, and already given in this paper, and said that with these extensions the Soo plant, backed by its iron properties, would be a perfectly balanced and self sustaining industry, thoroughly equipped for independent life, no matter what might be merged.

Mr. Wood, of the Toronto Syndicate, was asked if the American steel interests were behind the deal in any way, but he denied this entirely, and inquiry of the U.S. Steel Corporation representatives in Canada brought forth the statement that such a rumor was news to them. So far as they knew there was no truth to the statement. A meeting of shareholders of the Hamilton Steel & Iron Co. was held at Hamilton on Wednesday, to confirm the action of the directors in increasing the number of directors from seven to nine, and the election of E. B. Osler, M.P., and W. D. Matthews. It was announced that extensive improvements, involving an expenditure of $1,000,000, were to be made to the plant, and that there is no liklihood of the company being gobbled up in the big Steel and Coal merger. What led to this rumor is believed to be the fact that J. K. L. Ross, son of the Coal Company's president, is a son-in-law of W. D. Matthews, who recently with E. B. Osler, bought some of the Hamilton stock.

A still further rumor reported about the "street" was to the effect that the Montreal Steel Works, the Hamilton Steel and Iron Co. and another iron and steel company in Ontario, would shortly be merged, the Ontario Iron and Steel Co., Welland, being the name most prominently mentioned. The rumor further stated that K. W. Blackwell and Jas. R. Wilson, of the Montreal Steel, visited Toronto to further the project. The Ontario Iron and Steel Co., however, give the rumor a flat contradiction, and other prominent metal men say there is nothing in the statement that Hamilton and Montreal interests contemplate a deal.

CANADIAN METAL MARKETS

See Itemized Market Quotations on Page 74.

MONTREAL.

Nov. 19.—No changes have been announced in the metal markets this week although there has been a strengthening movement in tin and copper which, if the primary markets go on advancing, will result in higher figures here. Trade has been very good in a jobbing way, and heavy orders have been received from outside points. First hands report quieter times, although the galvanizing interests are buying well.

Iron and steel continue to show good business. The pressure on Canadian furnaces has not let up, and prices are firm. Imported iron is arriving in heavy consignments, but all the same a scarcity before the spring comes round again is not unlikely.

The two great points of interest this week have been the consolidation of the Dominion Iron and Steel and the parent Coal Company, and the rumored billion dollar copper trust under the wing of J. Pierpont Morgan. It cannot be said that the former news, although it has affected stocks, has had much influence on the local iron and steel trade. It would take a bigger merger than this to alter prices especially as the Dominion is out of the market so far as pig iron is concerned. The copper rumor, however, is distinctly inflating copper quotations, for if there is any truth in it, and the merger is quite feasible, a strong grip will be taken on production, which is all that is required to make copper soar.

PIG IRON.—There is little change from last week. Canadian furnaces are in the same position of being full up with orders, while imported pig is steadily arriving. We continue to quote $20 for No. 2 Canadian foundry iron at foundry and $20.50 for No. 2; Middlesboro No. 3, $19; Summerlee No. 2, $20.50; Cleveland, $19.75.

Record breaking outputs continue in the States in both industries and this month is expected to be better even than October. Pig iron prices are stationary, while finished steel products show a hardening tendency. The Dominion Iron and Steel directors have decided to erect another rod mill, the demand for this article having grown beyond the capacity of the present plant.

TIN.—Local prices for tin showed a firmer tone under better primary influences, but jobbing prices remained unaltered at 32½c., with the prospect of an advance. Local trading is good, and an encouraging interest is taken in the market. Good buying is reported both in London and New York, and there has been less speculation and more steady buying than for some time past.

COPPER—The advancing strength in New York copper, induced by the rumors as to a billion dollar corporation to control some 1,400 million pounds of copper annually, caused the local market to firm up, but although prices in some quarters advance, jobbing lots could still be obtained at 14c. Inquiries have developed in strength, especially from larger users, and the market is being anxiously watched. The effect of producers' statistics showing an increase in U. S. stocks of about 10,000,000 pounds for the month was neutralized by the great merger reports, and there was no sagging, but instead an advance. There is no doubt that production must be checked. The consumption has been very heavy all the year through, but it has been swamped by the record production. This year's output will be about 1,400 million pounds, and if the present rate is maintained, the returns will be terrific next year. Consumption can hardly be expected to catch up.

SPELTER.—There is no change in spelter prices, although an advance may occur at any moment and $5.75 is still quoted. Good buying is reported, and the market is very firm. London and St. Louis are but little changed, and there is no sign of the control being upset.

LEAD—Lead has been a little stronger in the English market, but local prices are unchanged, and $3.60 for imported and $3.50 for Trail still obtains. Buying is steady with perhaps a slight improvement.

SCRAP—Cast scrap is still scarce, due to good buying from Ontario, and a good inquiry for zinc obtains. No changes are announced, and we quote: Heavy copper and wire, 11c; light copper bottoms, 10c; heavy red brass, 10c; heavy yellow brass, 8c; light brass, 6¼c; tea lead, 2½c; heavy lead, 2¾c; scrap zinc, 3c; No. 1 wrought iron, 12c; machinery cast malleable, $9; miscellaneous steel, $7.

TORONTO.

November 19.—Copper has this week jumped to the middle of the stage, and with iron and steel is dividing honors. Whether it is the talk of the big merger which has induced the buying of copper, or whether it is simply an impetus that has been given to industry is problematical. Nor does any local dealer in copper wish to express an opinion on the point. Copper has been going up and down every few days for a year past, that all hands prefer to wait a week befor hazarding a statement. Certain it is, though, that copper buying which up to now, while increasing in size of orders, has been for immediate use, this week is being booked for future delivery, some of it after the turn of the year.

In iron and steel the coal and steel merger is all the talk, though not a single metal man thinks the merger will affect the market here in Canada. Buying is as active as ever. Indeed some of the structural concerns are said to be refusing to tender on new work. Whether this is because of rush of orders or not cannot be stated definitely, because some interests closely allied say it means simply a waiting for increased prices.

PIG IRON—Pig iron is still being freely purchasel. Consumers are in the field and buying not only for present but future needs. The prices show added strength, though no actual change in quotations is noted. Canadian foundry pig iron, No. 2, is $22 f.o.b., Toronto, and imported lines are $21 for Clarence and Middlesboro, No. 3; $21.75 for Cleveland, No. 1; and $23 for No. 2 Summerlee.

COPPER—The market is excited, due to the billion dollar copper merger across the line, and primaries report the metal as rapidly rising. Toronto quotations remain at 14c and 14½c for casting and lake ingots and the red metal is firm at these figures.

SPELTER—At $6 for hundred pound lots, foreign spelter remains unchanged in condition and price from last week. It is still active however, and very steady. Sheets (foreign) range from $6.75 to $7, and are firmer than last week. American spelter is selling from $8 to $8.50, the New York price being $6.25.

SHEETS AND PLATES—There seems to be a feeling abroad that galvanized sheets are slated for an advance in the not distant future, the high price of spelter lending truth to this opinion. Business in unabated volume continues to be done. A great many plates for use in the north country has been sold this month.

LEAD—Rather firmer outside but quiet locally appears to cover the lead situation this week. Supplies are plentiful. Imported lead is quoted at $3.65 locally, with Trail at $3.55.

TIN—Firm and active is tin this week, showing some improvement over a week ago. The quotation, 32½c, is stronger than a week ago, though really unchanged. It is harder to beat below this figure to-day than earlier in the month.

OLD MATERIALS—There is a further strengthening to old metals due to higher prices asked and offered outside. Dealers in Toronto have not altered their offerings, however. For heavy copper wire 11¼c is offered; for copper bottoms, 10½c; heavy red brass, 10¼c; heavy yellow brass, 8¾c; light brass, 6½c; tea lead, 2½c; heavy lead, 3c; scrap zinc, 3¾c; No. 1 wrought iron, $11; machinery cast scrap, No. 1, $15 to $16; stove plate, $13; malleable and steel, $8; old rubber, $9c.

SIXTEEN MILLION IN BOUNTIES.

Ottawa, Nov. 16.—According to figures furnished by the Department of Land and Commerce, the Dominion Government since 1896 has paid out in bounties $16,507,205 of all kinds.

During the fiscal year which closed March 31, 1908, the total amount paid was $1,864,614, and for iron and steel as follows:—Algoma Steel Co., Soo, $304,789; Dominion Iron & Steel Co., Sydney, $1,067,528; Nova Scotia Stee Co., $130,374; Hamilton Steel Co., $252,311; Canada Iron Furnace Co., Midland, $39,968; Canada Iron Co., Radnor Forges, $3,742; John McDougall & Co.,

Drummondville, $3,394; Lake Superior Co., Soo, $45,890; Ontario Iron Co., Welland, $6,887; Can. Iron Corporation, Midland, $9,295; and the same company for its Drummondville forges, $431.

Binder twine bounties reached a total of $34,561, divided in this way:—Can. Cordage Co., Peterboro, $4,692; Brantford Cordage Co., $2,977; Colonial Cordage Co., Toronto, $1,831; Consumers Cordage Co., Montreal and Dartmouth, N.S., $13,530; Kingston penitentiary, $1,897; Farmers' Binder Twine Co., Brantford, $1,713, and Plymouth Cordage Co., Welland, $7,918.

HARDWARE MARKETS

MONTREAL.

November 19.—No striking feature is noticed in the markets this week. A firm tone is prevalent all the way round, but no changes are announced, and no line seems prominently billed for an advance, except maybe rubber goods. There is a strong movement in cutlery, silver and plated ware, and in other lines, such as razors, etc., that are always active at this time. Builders' hardware continues to show up well, and, of course, lumbermen's supplies. Household utilities are in steady request.

Little booking is being done, and dealers will probably not order ahead much until after Christmas. Stocks are light, and the new year will open in a very healthy condition, with a confident feeling as to consumption and light shelves with the certainty of rising markets to induce prompt and adequate purchasing. Although perhaps trade this fall has not been of the magnitude anticipated by some, yet there is a general feeling of satisfaction. As one jobber said "I'd rather have things as they are, with merchants holding light stocks for the spring, than dealing with a boom that would result in heavy stocks being held over."

BUILDERS' HARDWARE—A good movement still continues in lock sets, bolts, butts, escutcheons and sash cords. Delivery has improved in lock sets. No changes are announced, and we quote: Lock sets (inside), $4 per doz and up; lock sets (outside), $13.20 and up; common rim locks, $1.10 per doz.; porcelain knobs, $1.10 per doz.; sash cords, 32½c to 33c.

WINTER LINES — Booking is still quiet, and the greater part of the trade is being done in sorting up orders in weather strip, sleigh bells, sleigh heaters, horse blankets, burners, lanterns and staple fixtures. There is a good demand for enamelware, especially from the northwest, and tin ware is also selling well. Staple household lines keep up steadily, a strong call being noticed for cleaning goods. The market is firm and unchanged.

CUTLERY AND SILVERWARE — The good movement in lines suitable for the Christmas trade continues. Carvers in cases, table cutlery and spoons are in prominent call. In fact, there is a good wholesome demand all the way round, and one that is above the average. Ordinary and safety razors, and shaving sets are good sellers.

SPORTING GOODS—Skates, hockey sticks, snowshoes and toboggans are moving out strongly, the local trade being encouraged by the first snowfall. The call for guns and ammunition is quiet. Air guns and gymnastic lines, such as exercisers, clubs, etc., are showing fair movement.

MINERS' SUPPLIES—There is not much character to the demand, a quiet movement, showing in pick handles and powder. We quote: Miners' picks, 16½c a pound; prospectors' hammers, 16½c; pick handles, $1.85 a dozen; drilling hammers, 6c a pound; crowbars, 3½c; drill steel, 8.

BOLTS AND NUTS—The market continues very firm, under a steady demand, and in sympathy with conditions across the border. No change in quotations is announced: Discounts on carriage bolts, ⅝ and smaller, 70; machine bolts, ⅝ and smaller, 70; machine bolts, ⅝ and less, 60, 10 and 10; coach screws, 75; stove bolts, 80 and 7½.

NAILS—The market continues strong and unchanged. Good orders are being received at the following quotations: Wire nails, $2.25; cut nails, $2.40.

LUMBERMEN'S SUPPLIES—There is a good active demand showing for all lines. Camp supplies also are moving well. The market is unchanged, and we quote: Cant hooks, $12 a dozen and up; axes, $6.50 a dozen and up; axe handles, $1.15 and up; cross-cut saws (inferior) 25c per foot and up; better grades, 43c per foot and up; axe wedges, 25c a doz and up.

SHOVELS—The fall of snow locally stimulated the sale of snow shovels. Otherwise the demand has been quiet. We quote: First and second grade of spades, 60 and 2½; 3rd and 4th, 50 and 2½; scoopes, 1st and 2nd grades, 50 and 5; 3rd and 4th, 45 and 5.

WIRE—Orders are on the light side, although some booking is noticed for spring delivery. We quote: Barb wire, car lots, mixed, $2.50; small lots, $2.55; plain twist, car lots, $2.80; small, $2.85. Galvanized wire, No. 9, $2.25 in straight and mixed car lots, and $2.30 small lots, f.o.b., Montreal. Coiled spring fencing, $2.30; straight and mixed car lots, and $2.35 small lots. Plain wire, bright, annealed and annealed and oiled, $2.35 base. Staples, bright, $2.60; galv., $2.85.

TORONTO.

November 19.—There is a noticeable improvement this week in hardware lines, though last week was by no means poor. Christmas trading has hardly opened up to the expectations of some jobbers, though cutlery in fancy boxes and useful sets have been rather freely sold since the opening of November.

Builders' hardware is almost as pressing as ever, though there is a little let up in new orders. Manufacturers are catching up with demands for this line that caught them unawares. There is still some difficulty, too, regarding the filling of some unstaple hardware goods.

Prices are unchanged, beyond the fact of some smaller lines that are fluctuating from day to day. There is a stronger feeling abroad that some iron and steel goods will go still higher, though probably not more than $1 a ton. The snow this week is expected to hurry along orders for winter goods.

BUILDERS' HARDWARE—The first glimpse of winter this week has made a pressure on hardwaremen catering to this trade to hurry along orders. Manufacturers say that they are catching up, and jobbers are hurrying along their part of the contracts. New orders are lighter than last week, no doubt due to the closing of the season, though the building permits issued are as numerous as ever. It is probable that some work may be carried over to next year.

SEASONABLE LINES—There have been some few delays in the filling of unstaple goods by manufacturers, but these are going out fairly well now, shelf goods are steady, though orders call for small lots. Christmas goods are beginning to move better now, though hardly up to expectations. Snow shovels, sleigh bells and blankets have had good calls during the week, and weather strip has been a fairly active line.

HEATING AND LIGHTING GOODS —There was a slower demand during the early part of the week, due, no doubt, to the mild weather. Even furnaces which all fall were so active showed a lighter demand. The snow on Thursday may help business next week, at least so it is expected. Stoves and ranges while hardly as good as even last week have been selling well. Lamps and sundries are active.

HOUSEHOLD GOODS—A further demand has sprung up for enamelware and tinware from outside points. Kitchen goods are steady and a slight impetus has been given to cleaning lines.

SPORTING GOODS — Outside hardwaremen are buying indoor sporting articles for winter, and especially boys' presentation holiday sales. Hockey sticks are yet a feature. Some sleds were shipped to nearby points this week.

Southams, Limited, manufacturers of tickets, tags, labels and specialties, Montreal, have added a new department to their business, a folding box department which includes a full assortment of machinery for the manufacture of folding boxes or cartons.

Will Merchants Be Represented at Farmers' Clubs?

Proposal to Bring About This Situation Meets With Favor From Government Official—Chief Object Will be to Prove to the Farmer the Financial Benefits of Dealing at Home—Other Questions That Might be Considered to Mutual Advantage.

The question has often arisen, how are the merchants going to educate farmers to co-operate with them in the building up of a community and hence mutually aiding each other from a financial standpoint?

Merchants know that they have not the co-operation from the farmers that they desire, and that they should have. They know that great numbers of the farming community around their places of business are sending past them to catalogue houses for goods; they are conscious of the fact that if they were in a position to carry on an educational campaign, pointing out the evil effects of such methods in plain dollars and cents that the mail-order situation would be alleviated.

If there were a proper medium in which to conduct such a campaign, as well as to deal with other questions, such as the proper attention to eggs, butter, etc., that have to pass through the hands of the merchants to the consumers, many of the troubles in the trade would be eliminated.

Those who are acquainted with the methods of farmers appreciate the value of Farmers' Clubs and Institutes. Through this medium they secure a great portion of their education. Then, why not use it to bring about the desired changes that are necessary to enhancing the wealth, value and standing of the community. The question is, how can it be done?

Bring Matter Before Institutes.

Hardware and Metal recently talked over the situation with Geo. A. Putnam, superintendent of Farmers' Institutes for Ontario, and suggested the idea of having representative merchants or other interested speakers, address the Farmers' Institutes on trade questions—this to be done with a view to better co-operation between farmer and merchant, tending to the strengthening of the community and to the placing of more dollars and cents into the pockets of both.

The proposal met with the favor of the dairy instructor. He had not looked at the matter in that light, but stated that he would consider the question, and in all probability, retail merchants will be given an opportunity to present their case before the farmers regularly at Farmers' and possibly Women's, Institutes and clubs.

The merchants, however, should not be inclined to work on sentimental lines in their talks to farmers. One simple, plain fact stated concisely, showing a farmer, or for that matter, any other person, how he can make $10 or how he can increase the value of his farm, is worth more than an all-night's talk catering to his sentiments.

Plain Money Talks Needed.

It will not be sufficient to say to a farmer that he must not buy from the mail order house because it is not fair for him to purchase goods past his own merchants. It is necessary that he be shown that he can buy goods cheaper at home than he can from the catalogue houses, and that he is actually losing money through mail order purchases. When it touches his pocket then he begins to listen and reflect.

The farmer must be made to see that the value of his land is enhanced, according as his home town grows. If he is positively assured that his land increases in value in direct proportion to the standing of the nearest village, town or city, and that it means direct money to him if he buys his goods at home, then he will certainly do so.

On the other hand, if he is told that the mail order house—which is considered as a legitimate institution — can sell more cheaply than the home merchant, but that the home merchant should get the business on general principles, then the effect of the whole argument is lost. Dollars and cents count, practically, every time, and the situation must be faced on this basis. It has been demonstrated from time to time that merchants in country districts can undersell the catalogue houses. Specific instances illustrating this are necessary in order to talk to the farmers so that the talk will be convincing.

While the mail order problem is one of the most important that could be discussed at Farmers' Institutes, there are other questions that could well be handled to mutual advantage.

Marketing Farm Products.

It is a fact well known, for instance, that the marketing of butter, eggs and poultry could be improved upon. Eggs are often allowed to remain in the farm houses for days and even weeks in the hot summer-time, when they should have been marketed. The merchant who handles them has to bear the complaints of the consumer, while in reality the farmer is to blame, in all probability, unconsciously. But the farmer must be shown how he is losing money by selling stale eggs before he will correct the error. Only then will he make an effort to sell fresh eggs. The merchant knows what he has to contend with in selling to the consumer and the better the quality of eggs and butter, the better will be the demand and, therefore, the more money will be paid to the farmer. Stale eggs will certainly not tend to create a demand for eggs and the more there are, the fewer will be the eggs consumed.

These are but a few of the questions that might suggest themselves were the retail merchants' associations given the privilege of having speakers attend the gatherings of the farmers. Much education could be accomplished on the catalogue house question, because the arguments against it could be made so convincing that farmers would be compelled to listen. It could be easily shown, that, while one mail order purchaser couldn't injure the community very much, scores would do considerable harm by sending their wealth away from the place, in the success of which they are directly interested. It simply means, as before pointed out, that the importance of their home towns and villages are lessened, and hence the value of their own farms decrease. Money talks, and they will have to be approached on no other basis.

Specific instances can easily be shown where land values have decreased simply because the home-town merchants were overlooked. Villages and towns go to pieces and land purchasers are difficult to find.

How Merchants Can Assist.

Of course, merchants themselves are to blame for many of such conditions. Live merchants who constanly boom their businesses and who work together can hold the trade of the surrounding community. Some years ago this was demonstrated out west in a small town just after a large mail order institution was established in Winnipeg. The merchants united, formed a joint-stock company, and made a specialty store out of each general store then established. One specialized on groceries, another on dry goods, etc., etc., and every business was run on the latest, up-to-date methods. The result was that little or no money went past this small town to the catalogue institution—because the townspeople and farmers were satisfied with what they were getting at home.

However, education among the farmers is needed, and, as Mr. Putnam intimates, there seems to be no better method than by bringing it about through the Institute meetings.

HARDWARE TRADE GOSSIP

Ontario.

The Jones Hardware Co., Ltd., Uxbridge, has obtained a charter, with a share capital of $11,000.

Geo. Andrew Elliott, hardwareman, Brantford, was married in Toronto last week to Miss Nettie May Lanning.

Smith & Johnson, hardwaremen, Meaford, have dissolved. The business will be continued by Benjamin Smith.

The Peterborough Hardware Co. supplied the large plate glass windows used in the new Braund block at that place.

While at work in the factory of the Toronto Wire & Nail Works, David Bailey was stricken with heart failure, and died in a few minutes one day early this week.

J. B. Bunt & Co. have purchased the hardware and tinware business of Lemmon & Co. at Kingston. Mr. Bunt is a hardwareman of 17 years standing, all that time with A. Chown & Co.

The Maple Leaf Harvest Tool Co, Tillsonburg, have been making extensive additions and alterations to their plant and have succeeded in getting the new works in operation for the coming season's trade.

The Frost Wire Fence Co., Hamilton, at the beginning of the season, offered a trip to California to sixteen of their agents who would sell the largest quantity of their wire fence during the season. One of the successful salesmen is R. H. Porter, Mulmur, who succeeded in selling about 5,000 rods. The party left Hamilton on November 3. The trip will probably last three or four weeks.

The three storey warehouse recently erected at Fort William for Fife & Co., wholesale and retail hardware dealers, was opened last week for business. Fort William has been chosen as the headquarters for the firm, which does an extensive trade between Nepigon and Winnipeg. The new quarters will supply all the other branches of the company, and Mr. Fife will make Fort William his permanent home.

The McMurtry Hardware Co., Galt, is enlarging its business and after January 1 will be known as the McMurtry Hardware Ltd., a joint stock company having been formed and a charter applied for. The new company will have a capitalization of $40,000. At present the company has three stores, one in Galt and two in St. Thomas. The manager of the Galt store will be Charles P. Brown, who has been with the George Taylor Hardware Co., New Liskeard, for the past three years, and was previous to that a member of the McMurtry Hardware Co. A. W. Pratten, who is now manager of the Galt store, will be manager of the two stores in St. Thomas, and W. J. McMurtry will be general manager. These three gentlemen have had a wide experience in the hardware business and are the principal stock holders in the new company.

Quebec.

J. B. Damour, Ste. Plilamene, Que., was in Montreal this week.

J. A. Dugas, Rawdon, Que., has been on a business trip to Montreal.

G. W. Dawson, Inspector of Penitentiaries, Ottawa, called on the Montreal hardware trade.

G. J. Crowdy, of James Hutton & Co., Montreal, has returned from a trip to Newfoundland and maritime provinces.

N. S. Neil, secretary of the Caledonian Iron Works Co., Montreal, has been appointed Industrial Commissioner for Port Arthur.

J. E. Maranda, of St. Paul St., Montreal, has been appointed agent for the Charles Fawcett Mfg. Co., stoves, etc., Sackville, N.B.

F. Hankin, manufacturers' agent, for some time in the Board of Trade Building, Montreal, has moved to the Coristine Building.

E. K. Spinney, Yarmouth, N.S., called at the Montreal office of Hardware and Metal. He spoke confidently of prospects in the maritimes.

At a meeting of the Stark-Seybold hockey club, Montreal, Herbert Seybold was elected president and E. Montgomery captain of the team.

Alfred Renaud, at one time connected with the iron trade in Montreal, died last week in Montreal in his 63rd year. He was born in St. Esprit, Que.

The hockey team of the Canadian Rubber Co., Montreal, has resigned from the Manufacturers' League owing to the game interfering with business duties.

H. G. Lawrence, president of the Lawrence Hardware Co., Halifax, N.S., builders, mechanics, and general hardware, has been a caller on the Montreal hardware trade.

R. E. Harris, president, and J. Walter Allison, director, of the Nova Scotia Coal and Steel Co., have been staying in Montreal in connection with the affairs of the company.

F. P. Jones, general manager of the Dominion Iron and Steel Co., has accepted the general management of the Canada Cement Company—the big cement merger. His salary will be $25,000 a year.

The Canadian Bronze Powder Co.'s works at Valleyfield, Que., have an equipment for the manufacture of bronze and aluminum castings. The factory also affords accommodation for a jobbing iron foundry.

The Canadian Iron Furnace Co.'s works on the Ste. Maurice, Three Rivers, have been partially burned out, the loss being about $50,000. The fire will probably throw some 200 men out of employment for some time.

A representative of Hardware and Metal recently caled upon Lamarre & Co., St. Remi, Que., who reported a good demand for ranges and heaters. The firm have a specialty in a No. 4 Tortoise heater with an all steel side oven.

R. W. Robb has been appointed manager of the Montreal office of the Robb Engineering Co., Amherst. Mr. Robb is a practical engineer, having had experience at the works, as well as erecting and operating the firm's engines in various parts of Canada.

Western Canada.

Claresholm, Alta., proposes to establish a garbage collecting system.

Fire at Harding, Man., destroyed the hardware store and warehouse of W. V. Stevenson. The loss amounted to over $10,000, with about half that amount of insurance.

Maritime.

A. W. Way, vice-president of The Lawrence Hardware Co., Ltd., Halifax, was a recent visitor to Sydney. The Lawrence Company is the reorganization of the old H. H. Fuller & Co., for whom Mr. Way was the travelling representative for so many years. H. G. Lawrence is president, and C. H. Bennet is secretary-treasurer of the new concern.

Catalogues and Booklets

Manufacturers or jobbers sending printed matter for review, should draw attention to the new lines listed; and retailers sending for catalogues or other matter, should write on their regular printed letterhead and mention this paper to make clear that they are in the trade.

Twine Making.—Manifestly one of the first things necessary for making good twine is good raw material. The principal materials used for making twine are manila and sisal fibre. The manila all comes from the Philippine Islands, and sisal chiefly from Yucatan in Mexico. These fibres vary so much in quality that it is a hard matter to secure the grade best suited for making good twine. The Plymouth Cordage Company, from whose recent publication the facts are taken, has been using these fibres ever since they began to be imported to this country. But the fibre is only the primary factor in making good twine or rope. Just the right amount of oil must be put in; the fibre must be hackled thoroughly; the sliver or band of fibre that is prepared to spin into twine must be carefully tested and weighed to be sure that it is just right for spinning into the exact size of twine required. When it comes to the spinning, perfection of work is imperative. This is a very important thing in twine-making. The best of material may be spoiled by poor or careless spinning, which will produce uneven, lumpy twine. The spinning machines wind the twine upon bobbins, after which it is taken to the balling room. The machines are almost human which take the twine from the bobbins and wind it into those solid, even balls.

Trade Gossip from Canada's Eastern Provinces

St. John Hardware Firm Purchases a Large Building to Add to Their Present Premises—Woodenware Company to Rebuild Plant Destroyed by Fire.

MONTREAL.

Nov. 18.—C. Edward Wood, who in 1906 was appointed general sales manager of the Dominion Cartridge Co., Montreal, has severed his connection with the company, and joined forces with

C. EDWARD WOOD, MONTREAL.
For the Past Three Years General Sales Manager of the Dominion Cartridge Company.

the Standard Arms Company of Wilmington, Del., in the same capacity of general sales manager.

Mr. Wood will probably be looking up many of his old friends in Canada in the interests of his new firm. Before joining the Dominion Cartridge Co., Mr. Wood was associated with the Simmons Hardware Co. Mr. Wood was given a great send off by his friends in Montreal, and he was wished the best of luck in his new sphere of work. F. J. A.

HALIFAX.

Nov. 15.—Hardware jobbers report the volume of business for the season of year as very satisfactory. The travelers now on the road continue to send in good orders and the outlook promises a continuance until the end of the year. The high prices asked for many lines of goods has had the effect of curtailing sales in some districts, but otherwise the conditions are fully up to expectations.

Metals continue high in price, and cordage also has an upward tendency. At the present time the manufacturers will not quote prices on cordage for spring delivery. This is taken as an indication that quotations will be higher. Cement stocks are now running low but prices are firm, ranging from $2.05 to $2.20. Linseed oil has been advanced one cent per gallon. Boiled oil in barrel lots is quoted at 76 cents, and raw at 73 cents. Nails are in good demand with prices firm. Prices have not changed, however, since the recent advance noted in this column. Bar iron shows an advance of five cents. The quotations are $2.05 base.

All the stove dealers report business brisk, the demand for stoves this season being much greater than for some years. The call is for hall and bed room stoves. Some of the dealers have had to bring their workmen back at night to make up pipe, as they could not turn out sufficient in the day time to keep up with the demand. There is also a fairly good demand from the outlying districts for wood stoves. J. H.

ST. JOHN.

November 17.—An important property purchase for which negotiations have been going on for some time was completed this week, whereby the wholesale and retail hardware firm of W. H. Thorne & Co., became the owners of the five-storey brick building on King street, occupied by J. W. Montgomery, as a clothing house. The purchase of this property will mean a large addition to the premises of the firm, which already included nearly 90,000 square feet of space, and will give them a frontage on King Street, which is the main business thoroughfare of the city. By acquiring this property the firm will be better able to divide their business into different departments. It is their intention to use the King street store for the sale of solid silver, plated ware, cut glass, cutlery and other goods of a similar nature. At present these goods are in close proximity to the department containing small hardware and cannot be shown to advantage. The upper floors of the new building will be utilized for wholesale warerooms. About $10,000 will be spent by the firm in making improvements on their new building and connecting it with the present premises on Prince William street. The rear of the two building meet almost at right angles and an addition is to be built so that there will be an uninterrupted passage from one to the other. The new building has a frontage on King street of 42 feet and extends back 50 feet, while the present premises on Prince William street have a frontage of over 100 feet. While the new building will afford a larger and better space for showing costly silverware, etc., the removal of this department from its present situation will also make it possible to display shelf hardware to much better advantage. The work of remodeling will be commenced in a few weeks and when completed the firm should have one of the finest hardware stores in the Dominion. The enterprise was founded in 1867 by W. H. Thorne, the present head of the firm, and it has been gradually increased to its present large proportions.

The Canada Woodenware Company, whose plant at Ossekeag, King's county, was burned in June, 1907, is being reorganized, and sufficient capital is being secured to build an up-to-date plant at South Bay, St. John county. Exemption from taxation and a free site have been promised and it is expected building operations will commence shortly. The company was doing a profitable business previous to the destruction of the plant, and it is believed it will be even more successful at South Bay. George C. Weldon, president of the S. Hayward Co., wholesale hardware dealers of this city, is president of the company and William Brown, will again be manager of the concern.

Interesting Trade Items Gathered in Ontario

Brantford Hardware Merchant Married — Kingston Hardware Business Changes Hands—Presentation to Cookstown Merchant —Grocer Buys St. Mary's Hardware Store.

KINGSTON.

November 17.—At a meeting of the board of governors of the School of Mining, tenders were awarded for the erection of a new chemistry building. The contract for plumbing, heating, ventilation, metal work and slating, was secured by McKelvey & Birch, for $7,672; the painting and glazing by T. McMahon & Co., for $1,940; and the lighting and wiring by the Newman Electric Co., for $1,195.50.

J. B. Bunt Co. have purchased the hardware and tinware establishment of Lemmon & Co., and are putting in a new line of goods. Mr. Bunt will have the active management of the store. He is a young man, with enterprise and progressiveness, and has been in the hardware business for seventeen years, all that time with A. Chown & Co., of this city.

It is stated on reliable authority, that among those interested in the new lease of the government dry dock, is the Collingwood Shipbuilding Company, and that when the lease is finally accepted by the government, as there seems to be no doubt it will be, it will mean the establishment of a very large repair plant in connection with the dry dock.

"Something occurred the other Satur-

day night, which would not make me favor the closing of stores at 9 o'clock," said a hardwareman. "After that hour, I made two sales of stoves, amounting to $75. Our business is rather peculiar; it is not like in a grocery store, or dry goods store; a person has to have someing in these stores, and if they do not come for it one day they will another time, but not so with the hardwareman, especially in the selling of stoves. You have got to be on the job when the people take the notion, and have the money."

E. G. B.

CORNWALL.

November 16.—One of the oldest established hardware businesses in this district is "Pitts' Hardware," located in Cornwall, it being established over half a century ago by Hiram Pitts. The present proprietor, R. J. Pitts, took the business over in 1886, and has developed the business to a commendable extent, the store and warehouse now occupying a floor space of 25 x 200 feet and two stories in height. Mr. Pitts was a traveler in his younger days before joining his father in business. He is also interested in several local manufacturing concerns, and is doing what he can to develop Cornwall as an industrial centre.

W.R.

SMITH'S FALLS.

November 10.—Thirty-six new houses were erected in Smith's Falls during 1909, at a value of $83,400. This includes St. John's Parish Hall, costing $8,000. The demand for hardware and tinsmithing has therefore been excellent. In addition to the above, there are three houses under way, making a total of 39 houses for the year. The $83,400 does not include improvements made during the year. About twenty new cottages were erected on the Rideau Lake near the town during the summer.

There have been 65 new connections to the town system of waterworks and sewage. The system has been greatly extended and will probably show a surplus of $6,000 for 1909. Over five miles of new granolithic walks have been constructed.

Frost & Woods are taking on men and by the end of the year over 500 will be on the payroll.

Inspector Barnes has started on a fire eescape cruasade to make the owners of every hotel and public building three stories high, equip the building with fire escapes.

G.C.K.

BRANTFORD.

November 17.—A by-law regulating the storage of gasoline in the city limits was passed by the council on Monday evening. The terms in brief, provide that no one in the city shall keep more than a barrel of gasoline without a permit. Persons desirous of keeping more than one barrel must secure a permit by application to the council, and must instal a Bowser tank in such location as the chief of the fire department shall select, and may keep therein not more than 300 gallons. The chief of the fire department shall also maintain an inspection for which the holder of the license shall pay $5 per year.

A quiet home wedding takes place this afternoon at the home of Mr. and Mrs. J. B. Laming, Toronto, when their only daughter, Nettie May, becomes the bride of George Andrew Elliott, hardware merchant, of this city.

With 5,000 working men employed for the most part in implement factories and iron foundries, there is a very brisk demand in this city for reliable machinists' tools. This is a feature which all local hardware dealers are not unaware of, and, with a well-stocked line of their needs, they make special inducements to mechanics to secure none but the best tools for use in their employments. This week Watt & Squire and A. Ballantyne show attractive windows of mechanics tools with a special view to this trade.

The day of the transient trader who comes here for a few days, and by the aid of generous gifts of various articles induces the citizens to purchase a pair of scissors or a razor, appears to have passed, or rather is in danger of extinction. At the last city council meeting, a by-law governing auctioneer's licenses, without which no peddler can offer goods for sale, was introduced, and given its first and second readings. By it auctioneer's licenses are issued by the city clerk, vised by the chief of police, who must be satisfied as to the character of the applicant, and finally passed by the city council at a regular session. An applicant must have a place of business in this city, and furthermore, the license may be cancelled at any time. For an infraction of the by-law, the maximum fine of $50 or thirty days may be imposed.

A. W.

COOKSTOWN.

November 16.—J. S. Willoughby, who recently sold his hardware and grocery business here and who is known to many hardware merchants throughout Ontario on account of his activity in the work of the Ontario Retail Hardware Association, is leaving Cookstown to locate with his family in Toronto. His friends here took the opportunity of making a presentation to him before his departure, accompanied by the following address:—

Your many friends of the Village of Cookstown having heard with regret of your intended departure to a wider field of opportunity and usefulness in Toronto, cannot permit you to depart without expressing our appreciation of you. You have always taken such an active part in everything that pertained to the welfare of our village, in its business life, church and Sunday school work and in our fraternal and patriotic associations, that we assure you we will miss you very much, and we wish you to know that your work has been very highly apreciated by your fellow citizens.

As a slight memento of our admiration and esteem we ask your acceptance of this secretary and bookcase, and as you use it, we know it will sometimes remind you of the many warm friends and well wishes you left in Cookstown.

F. E. E.

ST. MARY'S.

November 16.—James Chalmers, who recently announced his hardware business for sale, has sold to John M. Adam, a local merchant, who has shown exceptional ability in building up one of the best grocery businesses in this district. Mr. Adam will appoint a manager to conduct the grocery store and will devote his personal attention to the hardware business. He will make several changes and improvements in the store.

Mr. Adam intends joining the Retail Hardware Association, and will be an interested listener during the various sessions of the retail hardware convention at London next February.

F. E.

BARRIE.

November 15.—H. Dreyer, salesman in H. H. Otton & Son's store, had a fine hunting-goods window display, which attracted a gread deal of attention a fortnight ago. The floor was made up of maple leaves with a background of spruce trees. Beside one tree was the figure of a hunter in regulation costume, aiming rifle at squirrel, which was just emerging from a hole in a tree across the window. The full front of a deer was also shown behind a tree in the background and the whole effect was characteristic of a scene in the woods, Mr. Dreyer taking care not to destroy the hunting scene for the sake of showing a few goods for sale.

G. W.

BEAVERTON.

Nov. 13. — W. Glassford, hardware merchant, Beaverton, has returned from a hunting trip to Mowat, on the C.N.R., with the Beaver Hunting Club, of Beaverton. The six men in the club brought back six does and six bucks, as the reward of their energy, two of the bucks, brought down by Mr. Glassford's rifle, weighing 200 and 196 pounds respectively.

W.W.

MOUNT FOREST.

Nov. 13.—A centre of attraction last week was C. J. Thornhill's hardware store where a demonstration of cooking was conducted by representatives of the McClary Co., on one of that firm's ranges. Lee Thornhill's artistic hand was in evidence by way of an appropriately dressed window of a Thanksgiving design, with a live turkey in the corn with a thief and watchman.

News From the Prairie and British Columbia

Victoria Paint Concern Takes Out Charter for Half Million Dollar Company—New Buildings at Calgary.

WINNIPEG.

November 17—The Railway Commission sat in Winnipeg on November 15, and received deputations from several sources. The commission has been in the west for several weeks, and have been chiefly engaged with the freight rate question at various points. An application was made by the City of Regina, for a lowering of the tariff on certain goods shipped from eastern points. One of the complaints voiced was that Winnipeg is unduly favored by the railways. Regina it is claimed is a distributing centre, and should have better rates from Fort William.

D'Arcy Scott, chairman of the commission, spoke enthusiastically of trade conditions of the west. There was no car shortage either in handling the grain or distributing merchandise, and everything was moving satisfactorily.

The following are the officers of the Wholesale Hockey League for the coming season:—President, Tom Hodgson, (Geo. D. Woods); Vice-Pres., W. F. Auger, (Ashdown's); Sec.-Treas., R. Dunn, (Marshall-Wells); Committee, G. P. Hoskins, (Geo. D. Wood); K. David, (Marshall-Wells); W. Martin, (Ashdown's).

R. C. Wrigglesworth, formerly clerk in Batty Bros., store, Norwich, Ont., has been engaged to manage the hardware department of the business of D. J. Wallace, Winnipeg.

H. Miller, of the Miller-Morse hardware house, has left the city for a month's vacation in West Baden, Indiana.

The International Importing Co. has opened up an office in Winnipeg, under the management of Percy W. Dyde. At present the company are confining their attention to importations of cutlery, small hardware and firearms.

Nevin McWilliams, chief clerk of the plumbing department of the J. H. Ashdown retail house, was married on Wednesday, November 17. His friends and fellow employees made him a presentation.

Retailers are making strenuous efforts to land splendid Christmas trade. Fancy goods, such as brass and nickel-plated ware are already on display.

The retail paint, putty and glass business keeps up well. The interior work output is very heavy, and retailers expect that this condition will prevail for a month or more. Paints have been going out heavily all season, and the trade is in excellent condition. The metal trade is quite active, and the quantity of interior metal finishings in demand this year is numerous, all over the west there is considerable building still in operation, and metal roofing is greatly in demand.

The wholesale sporting goods houses of Winnipeg report a splendid fall trade in sporting goods, and the prospects for winter business were never better. The abundance of big game throughout the forests has resulted in an exceptionally heavy demand for sporting rifles, ammunition and all hunters' equipment. Traps and trappers' supplies are also selling well. Large orders for curling stones, skates and hockey goods of all kinds are being received from points both east and west, and the demand for these lines will doubtless increase in volume as the season advances.

The James Stewart Mfg. Co., are comfortably located in new premises, at 156 Lombard Street, following their fire of three weeks ago.

H. F. Nobbs, manager of the Metallic Roofing Co., was in Toronto last week.

Joe Bassinette, accused of stealing a stove, two dozen shovels, eight axes and a pipe-cutter from Johnson & Co., hardware merchants, was found guilty and given six months in jail with hard labor.

VICTORIA.

November 11.—The Victoria city council will be in the market shortly for an up-to-date street flushing machine.

The Provincial Gazette contains notice of the incorporation of W. J. Pendray Co., with a capital of $500,000 to take over the business carried on by W .J. Pendray under the trade name of the B.C. Soap Works and the British America Paint Company.

The city council is to draw up another money by-law to raise the necessary funds to construct more sewers.

The Western Motor Co. will build a fire proof garage.

A. J. Clyde, the sheet metal worker and hardware dealer who recently bought out the B. C. Trading Co., has moved his stock to their premises 558 Johnson street, where he will continue business.

The city council is calling for tenders for ornamental steel pillars for carrying arc lights. The lights are to go along the causeway in front of the Empress Hotel.

The new pumps for the salt water system installed by the D'Olier Engine Co., Philadelphia, after repeated tests have failed to work satisfactorily. It may be necessary to get new bearings from Philadelphia.

John W. Balfour, Victoria, was in the city this week, and told the Hardware and Metal that his company, the Balfour Patents, Ltd., is meeting with very encouraging success in promoting the two pronged spike for railway purposes, which it controls. The proposition is not to manufacture, but to dispose of the rights to prominent steel workers.

W. B. C.

CALGARY.

November 15.—Trading is good, the demand at present being for heaters and builders' hardware, while holiday lines in the shape of cutlery, silverware and platedware are in better call and a very satisfactory trade has opened up. While the volume of business is hardly so heavy as last month, hardwaremen are well satisfied with what is passing. Sentiment in the trade is more than optimistic, some of the houses already being able to show sales records ahead of any previous year in their business.

Plans have been drawn by Architect McElroy for the Y. W. C. A. building, which will cost $45,000. The excavation work will be finished this fall and the construction work will no doubt be started next spring.

An addition, costing $20,000 will be built on Braemar Lodge.

M. G.

TO REINFORCE BRICK WORK.

A revolution in brickwork has been brought about by the introduction of a system of wire reinforcement in the same way that concrete is reinforced. A wire mesh is enclosed in the mortar by which means a homogeneity is given to brick walls and great extra strength. By the use of this wire reinforcement brick walls do not require a continuous foundation. They support themselves and a load; they have a strength in proportion to their height; and buildings are rendered soundproof, fireproof, dry, while an even temperature is preserved. A striking economy is effected in space, combined with the highest efficiency. In fact previously the mortar was only used to bed and fill the interstices between the bricks, while now with the use of the wire, the mortar becomes the strength and the bricks the filling. This wire, which can be conveniently handled by any hardwareman, is manufactured by Johnson, Clapham & Morris, Manchester, England, and the sole agent for Canada is F. Hankin, Coristine Building, Montreal.

EGYPTIANS WANT LONG CREDITS.

Dealers in hardware at Cairo state that there is a steady demand for American builders' hardware and tools in Egypt. Carpenters' tools of the cheaper grades are popular. Machine tools do not find an extensive market, as there are practically no manufactories in Egypt requiring their use.

There would be a wider sale for American hardware if the Egyptian dealer was granted the terms of credit granted him by European merchants, a credit of from four to six months.

A good proportion of the American hardware now sold in Egypt is placed though a New York company, which has an agent in Cairo to look after its business and payments and through whom it conducts sales on the terms to which the local merchant is accustomed.

Condensed or "Want" Advertisements

Those who wish to sell or buy businesses or stocks, obtain competent help, connect with satisfactory positions or secure aid in starting new enterprises should not fail to use the Want Ad. Advertisement page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere who is looking for just such a proposition as you have to offer.

Medicine Hat and Its Hardware Stores

A Municipally Owned Natural Gas Well—Cheap Light, Heat and Power—Three Hardware Stores—All Report a Very Satisfactory Condition of Trade—Favorable to Formation of a Retail Hardware Association.

The natural gas city of Medicine Hat is situated on a level plateau, in a bend of the south branch of the Saskatchewan river. The land upon which the business portion of the city is built gradually slopes towards the river, while the surrounding hills are adorned with the handsome residences of its successful business men. This city owns its own natural gas well, and supplies the citizens at 13½c per 1,000 cubic feet. Gas is used for lighting, cooking and heating, and is so cheap that the city allows the street lights to burn continuously, it costing less to do so than to employ men to turn it out mornings and relight at night.

James Rae, a Pioneer Hardwareman at Medicine Hat.

Three Hardware Stores.

The Marshall Hardware Co., of which W. B. Marshall is president and H. A. Hunter, vice-president and manager, began business two years ago, as successors to W. B. Marshall & Co. They occupy the greater portion of The Marshall block on Toronto St., a three storey and basement building. The main store and show room is 32x80 feet, full depth of the building being 126 feet. The hardware section of the store is fitted up with oak front Bennett shelf boxes, made by Cameron & Campbell, Toronto. Samples are fastened to the fronts of the boxes. The firm's business shows an increase of at least 25 p.c. over the preceding year, brought about by the large influx of new settlers, who are engaging in mixed farming, and supplanting the large ranchers, as well as by increased activity in building within the city. The Marshall Co. are making a speciality of window displays, cuts of which frequently appear in Hardware and Metal, their plan being to make displays appropriate to the season. At present they have a "Harvest Window." This was preceded by a "Fishing Window," and will be followed with a "Cutlery Window."

The many friends of Fred Hocking, formerly of The Hockin Siddons Co., Moose Jaw, who now occupies the buyer's desk at The Marshall Hardware Co., will be glad to learn that the climate of Alberta is proving beneficial, and that the rheumatism from which he so severely suffered is leaving him.

James Rae, whose store is also on Toronto St., succeeded to the present business in 1904, although Mr. Rae was a member of the firm whom he succeeded. His store and basement are filled to overflowing, and he also has a large warehouse on the railway tracks. Mr. Rae says that this year promises to exceed all previous years, in the volume of business, and collections are extremely satisfactory. Crops and prices are good, and money plentiful. Mr. Rae's son, who is associated with him in the business, has very decided ideas as to the great value a good Provincial Hardware Association would be to the hardware men of Alberta.

Enlarging a Store.

J. J. Hewitt, who succeeded to the business of R. E. Walton in December last, was formerly connected with The Marshall Hardware Co., and occupies a fine brick store on Main Street. Mr. Hewitt has just completed an addition to the rear of his store, into which he is moving his tin-shop; the portion formerly used as a tin-shop is being thrown into the store, which will give him a show-room of 24x90 feet. A pair of offices will be fitted up at the rear of the store, one being for the bookkeeping and general business, and the other a private office for Mr. Hewitt, and for buying. Above the offices a deck will be arranged for the display of plumbing goods, the purpose being to show a complete bath room outfit. Mr. Hewitt has a force of fifteen men in all departments. He is also a strong believer in the necessity for a Provincial Association, in order that the abuses which are gradually creeping into the trade may be dealt with before they become more formidable.

H. N. J.

NEW CATCH FOR LANTERNS.

It is curious how often the greatest successes in business are the result of small improvements of the simplest kind The effective manner in which these simple devices perform just what is intended of them is often amazing. Such an improvement is a new patent catch the Ontario Lantern & Lamp Co., Hamilton, are equipping all their "Banner" lanterns with. This catch is on the side of the tubular part of the lantern and by a turn of the thumb the lift is held in position so that it is impossible for the same to drop, whilst with another turn of the thumb the lock is released and the shade lowered into position.

The immense increase in the business of the Ontario Lantern & Lamp Co., has necessitated the building of a new wing which is now about completed. This wing provides about 25 per cent. more floor space and is equipped with all the latest and most improved machinery. The very high standard set by this company on their goods necessitates a constant attention and watchful care.

Who makes the goods talk—whoever exhibits the true nature and uses of an article of commerse—whoever correctly and interestingly tells the news about his merchandise—he is the true advertiser.

A few Reasons Why You Should Handle

PEASE ECONOMY ROUND HOT WATER BOILERS

They are built especially for basements with low ceilings ---which gives them a wider demand.
They have Iron to Iron connections.
They have a large Centre Water Column.
They are set without rubber packing or washers.
They have large, powerful Direct Fire Surfaces.
They embody every modern improvement in boiler construction which is of real value either in adding to heating efficiency or reducing fuel consumption. As a result

ECONOMY BOILERS ARE EASY TO OPERATE AND ARE VERY ECONOMICAL.

If you are a practical dealer, a perusal of our Booklet will convince you. Send for a copy to-day.

Western Canada Hardware Market Situation

Our Western Correspondent Reviews the Market Outlook — Hardware Quotations Corrected by Telegraph From Hardware and Metal's Winnipeg Office up to Noon on Friday.

Nov. 18.—With the continued spell of beautiful weather the trade although of a sorting nature, continues heavy. The past season has seen so much building in every part of the country that both builders' supplies and household goods have been in demand steadily. The increased population of the country has had a tendency to rapidly deplete stocks in the cautious retailers' hands, and repeated orders for several lines has been a feature of the fall trade. This was perhaps more noticeable in heating goods and stoves. Merchants stocked on the basis of last year's trade but they have found that this year they were altogether too light. They were wise in buying conservatively, but much to the gratification of all retailers everywhere are lengthening their cords and strengthening their stakes.

Holiday goods are going out from wholesalers freely just now. The Xmas trade promises to be an excellent one. Mr. Lawrence, manager of the Ashdown retail, who was in Chicago last week, stated that manufacturers and wholesalers of holiday goods anticipated the heaviest season's trade they have ever experienced, and their attention is directed toward Western Canada.

Winnipeg Quotations.

SHERWIN-WILLIAMS
FLAXOAP

A Household Necessity Cleans all Surfaces

Flaxoap is a product which every dealer should handle because it is a splendid seller and nets a good profit. It is a pure linseed oil soap put up in paste form. Owing to the fact that linseed oil soap is the life of paints and varnishes, Flaxoap is the best cleaning material that can be used on all painted and varnished surfaces, as it tends to keep the paint or varnish film in perfect condition.

Write us for further particulars now and place a stock of Flaxoap on your shelves.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal waterworks and sewerage systems, railway or mining news, etc.

Industrial Activity.

The Western Motor Co. will erect a large modern garage at Victoria.

The National Elevator Co. will at once erect a 60,000 bushel elevator at Port Arthur.

The Battle Creek Health Food Co., London, will build a four storey addition to their plant to cost $2,500.

The Parker Dye Works, Toronto, have applied for a building permit for a large and complete gasoline cleaning plant.

The Canadian Corrugated Pipe Co. has purchased several lots at Portage la Prairie and will erect a plant there.

A new steel manufacturing plant is to be established in Longue Pointe by the Montreal Steel Works, the property for the new establishment having been purchased last week.

The Brackman-Ker Milling Co., Vancouver is planning to move to larger quarters, and it has acquired for $100,000 a new property. It is planning to build in the near future.

Mr. Armitage, of Cleveland, Ohio, proposes the building of a $40,000 worsted industry at Ingersoll; and H. S. Peters, or Dover, N.J., may also establish a Canadian branch factory there for the manufacture of "Brotherhood Overalls."

Hourd & Co., London, have commenced work on additions to their factory which will increase the capacity of the plant over 50 per cent. Two new buildings are being erected. It is understood that a number of additional men will be taken on when the work is completed.

A wire factory is an industry that will probably be established in New Westminster in the near future, and Thomas F. Black, of the Black Hardware Co., Winnipeg, is at present conferring with the city council and board of trade there on the matter of securing a suitable site for the proposed plant.

The Regal Automobile Co., of Detroit, proposes to establish its Canadian branch at Windsor, and a new company is being organized, including E. N. Richards, of Windsor, who is to be manager. To supply the Canadian trade the company proposes to establish a $100,000 plant, with a capacity of five cars a day. Negotiations for a suitable site are being made and it is expected building will begin in two or three weeks.

Negotiations have been concluded for the location at Welland of a large steel plant, where smelting will be done by electricity. This company will be known as the Electric Steel Co. of Canada, with head office in Toronto and branch office in Buffalo. The men behind the industry have large interests in steel and iron in the Pittsburg section. They are: President, Tyson S. Dynes, St. Louis, Mo.; vice-president, George G. Goodrich, Saratoga, N.Y.; secretary, A. S. Ramage. Work on the initial building, the billet mill, will begin in a few days. One thousand horse-power for the operation of the mill have been contracted for with the Falls Power Company. The daily output will be 1,000 tons, which will require 2,000 tons of ore daily or a shipload a day. Five vessels are already under contract to deliver ores before the close of navigation, for it is anticipated that the mill will be ready for testing before the opening of navigation next season. It is intended to erect next year other mills for the making of finished products in iron and steel.

Municipal Undertakings.

A $4,000 water main will be laid at Welland.

A new main sewer will be constructed at Sackville, N.B.

Work is being pushed on Prince Rupert's waterworks system.

A number of extensions will be made to the Vancouver waterworks system next year.

Victoria is making surveys relative to undertaking the construction of a waterworks system from Sooke Lake.

The installation of New Liskeard's waterworks connections is held up by the lack of the necessary fittings.

Wingham ratepayers will in January vote on a by-law to construct a waterworks system and a main sewer.

The Canada Foundry Co., Toronto, at $630 was awarded the contract for steel pipe required for the Ottawa waterworks system.

The Ontario Railway and Municipal Board have approved by-laws under which Cobalt township is to spend $75,000, and the town of Cobalt $25,000 upon a water works system.

Despite numerous threats on the part of the Windsor Council, work on the Walkerville relief sewer is progressing rapidly. On the ground that to allow the sewer to empty into the river so close to the Windsor water works would pollute the water used by nearly every family in Windsor, the matter has been referred to the Provincial Board of Health.

By installing a gravity system, which will do away entirely with maintenance and operating expenses, Hamilton hopes to save save about $25,000 a year on the new west end sewage disposal plant, which will be built next year if use in ermany.

system will be the first of its kind in this country, although there is one in use in Germank.

Public Buildings.

A C. N. R. and G. T. R. union station is proposed to be built at Cobourg.

The Morris vaudeville trust will spend $1,000,000 on new theatres in Canada.

A new $70,000 vaudeville theatre will be built at Ottawa by Buffalo interests.

A new post office building is promised to be built at Weyburn, Sask., next year.

A $10,000 wing is proposed to be added to Royal Victoria Hospital, Barrie.

A special committee has recommended the building of a $30,000 hospital at Wetaskiwin.

The Waterloo, Ont., Board of Trade endorse the proposition to erect a new market building there.

The Yorkton, Sask., school board are to erect a collegiate next spring at an approximate cost of $13,000.

The Presbyterian College at Saskatoon will begin building next April, if $50,000 has been collected by that date.

Queen Street East Methodists hope to erect a substantial new building in a more favorable location at Toronto.

The new Parkdale Public School Toronto, is to be constructed at a cost of $5,000. A permit for the building has been granted.

Macleod council has under consideration a project to build a $25,000 hospital, and run it as a civic venture, equipping it in up-to-date fashion.

A new eleven-room public school on Logan Avenue, Toronto, instead of the proposed five-room structure, is now the desire of the Board of Education.

The congregation of St. Andrew's Roman Catholic Church, Port Arthur, have decided to adopt the plans of G. E. Tanquay, of Quebec, for a new cathedral that will cost from $85,000 to $100,000.

A temporary station will be built by the B. C. E. R., so that the present depot may be razed, to make room for the magnificent new station which the company has planned to erect for its New Westminster terminus.

Plans for the reconstruction of the burned wing of the Toronto Parliament Buildings were submitted to Hon. Dr. Reaume, Minister of Public Works, by Mr. E. J. Lennox, the architect. The cost is estimated at $285,000.

It is stated on good authority that the Canadian Northern have had plans prepared for a new up-to-date station fitted up with all modern improvements. Those who have seen the plans say that it will be one of the best stations along the main line.

A deputation representing the Toronto Reform Association interviewed the Ottawa government with respect to the consolidation of the various Toronto

Electrical Goods Development in Holiday Trade

Make a Good Showing of Electrical Goods—Lines to Use in an Attractive Window Display—Miniature Lamps for Christmas are Good Sellers.

For the Christmas trade the hardwaremen can make a good showing of electrical goods. There are a number of novelties on the market, some useful, others more of a toy character, but all good sellers. In addition to electrical lines being attractive in themselves, they are not done to death by severe competition, and they carry a fair profit. A good electrical display is an advertisement for a store in a general way as there is nothing more certain to attract observers.

Window of Electrical Utilities

A window of electrical household utilities would prove a great attraction, and one not difficult to design or very expensive in character. The trim could be that of a sitting room, and, of course, the merchant could make his fillers of staple lines. In prominent position, he could show a sewing machine operated by a little electrical motor, and nearby, in happy juxtaposition, an electrical flat iron on an ironing board. It will be noticed that both these lines serve to display staple goods of hardware. On a table might be placed an electric cigar lighter, an electric chafing dish, coffee percolator, and tea pot. Going more into elaborate articles an electric luminous heat radiator could be shown, which not only gives out heat, but lights up with a cheerful glow, and a cupboard with an electrical attachment whereby the opening of the door turns on an electrical light inside, and the closing shuts off the connection. A vacuum sweeper might also be included. To this list could be added these articles which carry their own battery with them, and can be used in any home. There is the electric candle, which has its battery in the candlestick, the clock with its light over the face, or the watch stand also supplied with its tiny bulb. There is a wide range of novelties which the enterprising merchant can show.

Miniature Lamp Display.

Splendid decorative effects can be produced by miniature lamps, and the consumption field is a very wide one. At Christmas time, especially, when so much entertaining is going on there should be a good demand for these lights as they can be made to produce such charming effects, and can be installed by anyone. The ordinary Christmas candles for lighting effects are a back number. Besides, candles are unsafe. Nothing adds greater charm to the decoration of a room than the gem-like gleams of tiny electric lights from the flowers, or the dinner table, or from the walls, columns, balsutrades, and chandeliers. The Edison Electric Decorative Lighting outfits sold by the Canadian General Electric Co., Toronto, produce very beautiful results, as each lamp gives twice the light of the ordinary Christmas candle. They are very convenient to arrange. It is simply necessary to twine the festoons among the vines and flowers, or drop them over the trees and other objects to be decoroted, screw the little lamps in place, and put the attaching plug in the nearest regular lamp socket. The outfit is flexible, constructed in a thoroughly practical manner, and is a serviceable and valuable household possession. An outfit will last for years. For Christmas trees they are especially good, as they do away with all danger of fire, and are so well insulated that children can handle them with safety. For decorative effect the hardwareman could show them to advantage in his own window.

Inverted Gas Burners.

An inverted gas burner has been invented which does away with many of the disadvantages attached to the old style, especially that of discoloration. In this burner, by a peculiar construction of the upper portion, the heated air is deflected, while the aid of an insulator inserted in the gas tube prevents the fitting above the burner becoming heated and discolored. The burner has a two way smoke diffuser which obviates the blackening of the ceiling, while an efficient dust trap and pressure regulator ensures the right quantity of clean gas and air entering the mantle to fill it and keep it wholly incandescent.

A novelty in burner construction is that of the insertion of a convolute spring between the mixing chamber and the body of the burner, by which means the latter is held in suspension, and shocks at the mantle are obviated. The spring and an asbestos washer, used in connection with it, act as non-conductors of heat between the gas nozzle and the gas regulator, and thus keep the latter comparatively cool so that it may be adjusteh when the gas is burning. The flexible joint effects a considerable saving in mantles, and also saves the expense of fitting special anti-vibration apparatus where mantles are particularly liable to shock.

English-made Glass.

A distinct revival has lately taken place in the demand for English made glass for gas and electrical light purposes. This is due largely to the improvements that are being made in the product, and to the unique designs that are being gotten up. Shades for both gas and electric purposes are now being made in various finishes, including opalescent colors, tints, etchings, and intaglio decorations. The last-named decoration, though new to this generation, is in reality a revival of a very ancient art; and it is as beautiful as it is old. It takes the form of an incised decoration on the plain surface of the glass, and is effected by a process which is neither cutting nor engraving but a mixture of both. The effect produced, especially when applied to large and expensive flower vases, is strikingly brilliant and beautiful. It is hardly less pleasing when applied to gas and electric shades, and perhaps at night, when illuminated, the brilliance would be even more marked.

Push Oil Lamps.

Although the development in electric and gas lighting has hit the sale of lamps very heavily, in some districts, still there is a great sale for these articles not only in those communities where they are still in monopoly, but even where the more modern means of lighting are now in vogue. Many people prefer oil to gas or electricity, especially for reading, while artistic lamps make handsome additions to the furniture. It is therefore wise to keep on pushing lamps, not only because of the profit on the article alone, but because the sale of a lamp is always productive of other sales rendered necessary by the demands of the lamp for fuel and for up-keep. When a lamp is sold there is an excellent opportunity of making a customer for the oil, and it is also most natural that the continual demand for lamp chimneys, globes and wicks shall be made at the same store where the lamp came from originally. These are all profitable commodities to handle and they assist to hold the trade together by compelling the users to seek the store where the goods are supplied. Lamps have fallen under some condemnation on account of their liability to smoke and smell, and their failure to render a powerful light. But in nearly all these cases the actual cause is the neglect of the owner, and not in the least the fault of the lamp. Undoubtedly lamps are well worth pushing despite later methods of illumination.

BUSINESS CHANGES HANDS.

Electrical Specialties, Limited, Toronto, have sold their plant for manufacturing electrical batteries to Alfred Landau, of the Canadian Carbon Company and have removed to 115 Church Street, where they will continue their auto and motor boat supply business.

The Canadian Carbon Company will continue at 12, 14 and 16 Shuter Street, Toronto, where they will devote their attention to the manufacture of "X cell" batteries and the importation of "Fabius Henrion" carbons, Mr. Landau being manager.

The Retail Paint Trade

TAKE INTEREST IN CUSTOMER.

A great factor in a merchant's success is the treatment of his customers, and especialy is this so in connection with the paint department. Some people have most crude ideas of painting. Not only are they uncertain as to the color that they really want, but they are ignorant as to the best way of applying the paint, and the right kind of brush to use. It is, therefore, with a certain feeling of doubtfulness that they enter the store, and upon their treatment while buying depends their further relationship with the merchant.

It can be easily seen that a customer in this uncertain state of mind is readily affected by the treatment he receives. If the clerk is off-handed, and seems surprised that the purchaser does not know his own mind on such a simple subject, and makes no attempt to find out what really is required then, already predisposed to feel any lack of interest, the purchaser buys the goods and goes away feeling that it will be a long time before he purchases any more paint at that store. In a case where the customer knows exactly what he wants then any lack of attention, if not unnoticed is not felt to such an extent.

But if a clerk takes an interest in a customer who is in doubt, a feeling of appreciation is felt that will mean many dollars and cents to the store. The difficult question of what color would go best is solved between the two, the right kind of brush is bought, and the customer goes away primed up with those simple little painting rules which are so easily learnt and yet mean all the difference between good and bad work. "That is a fine store" is the thought when the purchaser goes away, "and I am going to tell So-and-so about it." Just think of what this means to a paint department.

Especially at this time of the year when the womenfolk are buying household lines such as varnish, stains, enamels and such like, is it essential that the dealer and his clerks should take an interest in each purchase and put the customer on the right road. Even in the quantity required there is a chance of putting the store on a good footing with the customer. Women have a very vague idea of the amount of paint that they will require, and often ask for a large tin when a small one will do. The merchant does not lose in the long run when he prevents a customer from overloading herself. He may lose on the sale, but he gains a friend, and it is friends that a merchant wants, not customers who would as soon buy from a competitor as from him.

Then, again, comes the question of complaints. It is the complaints that never reach the merchant which hurt his trade so much. A purchaser goes away

"the finish"
"that endures"

Floorglaze

This is the new super-good floor finish—now coming in Transparent Lacs as well as Solid Enamel Colors—that your customers will always want and talk about. With a line of M.L. and owing to no instruction from the salesman puts on the paint improperly, and without giving the surface any care. A bad appearance is the result, and the paint and the dealers are at once condemned. If the customer comes back with the story, the merchant has a chance of putting the matter right, but as in many cases the complaint does not come under his notice a great injury is done to his trade, all because his salesman in the first place took no trouble to give the purchaser some hints as to how the stuff should be applied. Too much attention cannot be paid to a customer, and the greater the interest taken in the purchase the greater the ultimate profit to the store.

PAINT AND OIL MARKETS

MONTREAL.

November 19.—An improvement has been noticed in general business due no doubt in some measure to the fact that the mild weather has encouraged some rush orders. The renewed activity has not been confined to any particular line, but distributed evenly in all branches of the trade. The cut in turpentine does not seem to have completely effected its purpose, and the buying is still on the quiet side. Linseed oil is firm and showing good activity, while there is a better movement in ground white lead. Red lead is in steady request. Household lines are moving in an encouraging fashion.

TURPENTINE—Notwithstanding the drop in some quarters in turpentine the hand-to-mouth buying that has been in evidence for some time past has not improved to any material extent, and the buying has been quiet, especially considering that at this time of the year turpentine should be in good request from all the large factories. We quote 78c to 80c for single barrels.

LINSEED OIL—A good feeling is apparent in linseed oil. Buying is active, and an optimistic feeling prevails regarding market conditions for the future. We quote. 1 to 4 barrels, in one delivery, raw, 73c per gal.; boiled, 76c per gal.; net 30 days, f.o.b., Montreal.

GROUND WHITE LEAD — A better inquiry is noticed. No change in market conditions has occurred and quotations are still as follows: Strictly pure about $5.25 to $5.75, according to quality, and No. 1, $4.85 to $5.25, f.o.b., Montreal.

RED LEAD—Prices keep remarkably steady, and the trade, without being particularly busy, report a satisfactory output. We quote: Genuine red lead in casks, $4.25; in 100-lb. kegs, $4.75; less quantities at $5.75 per 100 lbs.; No. 1 red lead, casks, $3.75; kegs, $4.25, and smaller quantities, $5.25.

WHITE ZINC—White zinc has been in fair request for some time, and good sized orders have come in during the week. Quotations are unchanged: Dry V.M. Red Seal, 7½; Red Seal, 7c; French V.M., 6c; Lehigh, 5c; white zinc, ground in oil, pure, 8½c; No. 1, 7c; No. 2, 5½c.

VARNISHES AND JAPANS — For brown and gold size japans the output this week has been very good, mild and damp weather calling for the free use of dryers. Varnishes are also in good demand.

PUTTY—Putty is in good request at very firm quotations. We quote: Standard putty, 800 lbs., in casks, $1.75; in 100-lb. drums, $2; bladder putty, 400 lbs., in barrels $2.15; in 100-lb. cases, $2.25; in 25-lb. tins, $2.15; 12½-lb. tins, $3.25, f.o.b., Montreal.

TORONTO.

November 19.—The continued mild weather has induced a better buying of paint lines. Many of the larger hotels and warehouses which ordinarily wait until spring to furbish up are this season joining the growing army of fall painters. Nor is the painting fever confined to these larger concerns. Hardwaremen state that in the country points farmers and small home owners have gone on with painting at a better clip than during any previous fall season. The farmer has been doing as much outside work as possible while the mild weather lasts. Having finished his fall plowing and many of his repairs about the farm and barns, he has of late been brightening up his house. This condition has helped good sales of white lead in oil, which has been a prominent feature of trading of late, and particularly this week.

Prices are stationary compared with a week ago, though there is a distinctly easier feeling in regard to turpentine prices.

LINSEED OIL—This line remains unchanged, but the price of flaxseed seems to keep advancing, which tends to strengthen the market, although there is not any great demand for oil at the present time. Single barrels of raw oil are at 73c a gallon; 5-barrel lots, 72c; and 10-barrel lots, 71c. Boiled oil runs 3 cents higher than these figures.

TURPENTINE—"Turps" at the Southern States have suffered a slight decline ranging from two to three cents per gallon. At the reduced price one of the large exporters cleaned up the market the latter part of last week when a new advance took place, but as the demand was not quite as strong as it had been the market declined again. It is still claimed that the quantity produced shows a very great shortage. Turpentine may be had in Toronto at various prices ranging from 80 to 83 cents. One house has dropped its quotation for single barrels to 80c from 82c. Trading is quiet.

GLASS—Prices are still firm at 30 per cent. Some little glass has come

White Lead

At the present time the white lead situation is interesting.

We are the only firm in Canada who corrode and grind white lead, in addition to making Varnish, Dry Colors, Paints, Enamels, etc., etc.

Our white lead proposition is naturally the very best.

NEW YORK CHICAGO LONDON BERLIN BRUSSELS

up from Montreal this week, which has temporarily relieved the situation.

PUTTY—Still good business is being done at unchanged quotations.

WHITE LEAD—The market seems to be firmer this week on rumors of a better understanding among grinders. Demand is better, also, and a very fair selling week is this present one. Prices run from $5.55 to $6 for small quantities.

RED LEAD—Sales are steady for small lots at quotations ranging from $4.25 to $4.55, according to quantity and quality.

PETROLEUM—Very active are all oil lines, though prices continue steady. Pratt's astral is 17½; water white, 15½c; and prime white, 13½c.

RETAIL PRICES OF OIL

F. W. S. Davis, salesman for Sanderson Pearcy & Co., Toronto, writing to Hardware & Metal, suggests that this is a good time for retailers to advance the price of linseed oil and turpentine. The quantities sold at this season are small and the opportunity for educating customers to the higher prices now ruling on these lines is much better now than next May or June. The retail prices suggested are as follows.

	Raw Oil	Boiled Oil	Turpentine
5 gallon lots at	$0.90	$0.95	$1.20
1 " "	95	1.00	1.25
½ " "	50	50	65
¼ " "	25	25	35
pint "	15	15	20
½ pint "	10	10	10

PRINCIPLES OF WINDOW DISPLAY.

In displaying paints, not many fixtures are necessary, but what are used are none the less important. Have good material for background and base—something that may be easily changed.

Use a plain colored carpet or cloth for floor, with a well-painted background; or, better, good hangings on a rod, in black or brown or blue, to match the floor.

The display, if it is to help sell goods, must attract attention by its novelty, interest by its suggestiveness, and educate by giving information regarding the articles to be sold.

It is not enough simply to amuse or to astonish, but the display in some way must be connected with the article you want to sell.

A stump of a tree put in the window would no doubt attract much attention and lead to questions as to the cause of its being there, largely because it would seem so foreign to the business. It would not, however, sell paint. But a card, "'High Standard' Paint will cover even such wood as this," would connect the display with the article you want to sell and would set the passer-by to thinking.

In making up a window display it is important to try to look at it from the standpoint of the buyer. The question is what arrangement of your paint will best show the purpose for which it is to be used, or the method of using it so as to attract the passer-by and suggest his need?

Show what you can to advantage and no more. The quantity in the window is not to be in proportion to the size of the stock carried. Very often a single can or the article to be covered with the paint is sufficient for the display.

GOOD FOR THE CUSTOMER

BETTER FOR THE DEALER

¶ Poor paint is a poor purchase for the customer. It costs just as much to put it on as the good kind but it won't wear long enough to be profitable. The economical, careful man wants the best paint he can buy. It's up to the dealer to sell him paint that will satisfy his ideas of economy—that's

Martin-Senour Paint—
100 Per Cent Pure

—it never fails to make friends for the dealer.

¶ Quality paint is always a good purchase for the customer—it gives satisfaction and is economical in service. Measured by its years of wear

Martin-Senour Paint—
100 Per Cent Pure

is the cheapest paint in the world. That's why it is the best paint for the dealer to sell. Get our line and let us help you convince the paint buyers in your town that your store is the place to trade. Write today for our plan.

Turn Your Losses Into Profits

Every drop of oil you are now losing through leakage, evaporation and waste means just so much out of your profits.

Stop these losses, turn them into profits by selling your oil from a Bowser Self-Measuring Oil Tank. The Bowser adds to your profits every year an amount that would surprise you.

Is not an investment like this at least worth a thorough investigation? It will cost you but one cent to send a postal for Catalog 5446. Write to-day.

S. F. Bowser & Co., Limited
66-68 Fraser Ave. - TORONTO

If you have an old Bowser and Want a new one, write for our liberal exchange offer.

"SAFE-LOCK"

and

"CANADIAN MONARCH" FENCES

We can fit you out with both a "staple" lock and a "wrapped" lock fence of all number Nine wire. No other one fence company in Canada is so situated and prepared to meet all requirements, and those who handle our two lines of fencing have as complete a variety as if buying from two or more firms.

Write us for particulars and agency for Fence, Gates, etc.

Solid Stem Expansive Bit

The Only One Made

Drop Forged from Best Cast Steel

Especially adapted for Boring in Hardwood

This bit is a great improvement over the old form in which the dovetail method of holding the cutter is used, it being so constructed that the cutter will stand the severest strain without creeping, springing or loosening.

The binding screw holds the cutter firmly in place, the small set screw preventing it from being forced in either direction, thus forming a double locking device with cutter immovable until screws are released.

If your jobber cannot supply you, write us for illustration and prices.

SMITH HARDWARE CO., LTD.

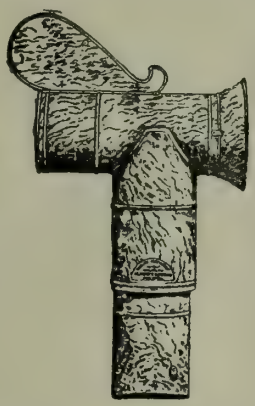
EXPERIENCED ADVERTISEMENT WRITERS

who are open for a situation are requested to register their names with the MacLean Publishing Co., at any of their offices. Inquiries are occasionally made by manufacturers and wholesale houses who contemplate establishing their own advertising department.



FIX UP YOUR CHIMNEYS

Even the best stove or furnace will be unsatisfactory if the chimney does not draw well. But the

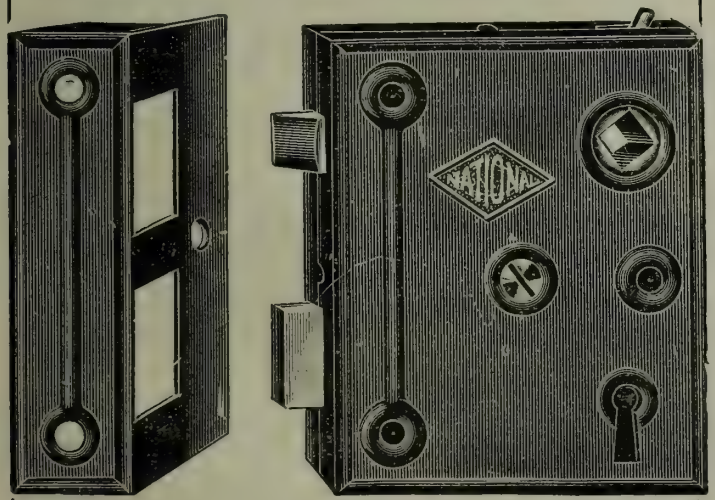
"Zephyr Ventilator"

will give a good draft to any chimney. It will even allow the burning of soft coal in the stove, with good results.

We want you to sell the "Zephyr Ventilator" in your town. There is money in it, and the satisfaction that it gives will bring you new customers. **The "Zephyr"** cannot be excelled for ventilating the rooms of **Clubs, Steam Laundries,** etc. **The "Zephyr" makes high chimneys unnecessary.**

Penetanguishene, Jan. 18, 1909

J. W. Harris Mfg. Co., Ltd.
Montreal.



Gentlemen :—
In reply to yours of the 15th inst., regarding the two (2) "J. W. Harris Rotary Ventilators" which I got from you in September 1907, I must say that my customer is well satisfied, and he told me that they work fine and could not work any better.

Yours truly,
M. A. Gendron.

CURRENT MARKET QUOTATIONS.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

A DEALER'S OPINION OF THE

ROSS SPORTING RIFLE

TORONTO, April 24th, 1909.

"I have just opened the cases holding rifles, and am mightily pleased with the appearance of the rifles. I am going to keep one of the next shipment for myself. If it is possible select me something pretty good. You notice I say 'if possible.' What I mean is that I think the perfection mark seems nearly reached, therefore I add the words 'if possible.'"

A. ELLIOTT.

Dealers naturally prefer selling rifles that are growing in popularity—that are winning their way rapidly into public favor—that have long passed the experimental stage and are endorsed by dealers and sportsmen everywhere.

If you are not yet handling them write us for full particulars.

THROW A SPRAT TO CATCH A MACKEREL

You can't fish without good bait.

It's not the cost of the bait, but the knowledge of just what bait to use to catch the kind of fish you are after.

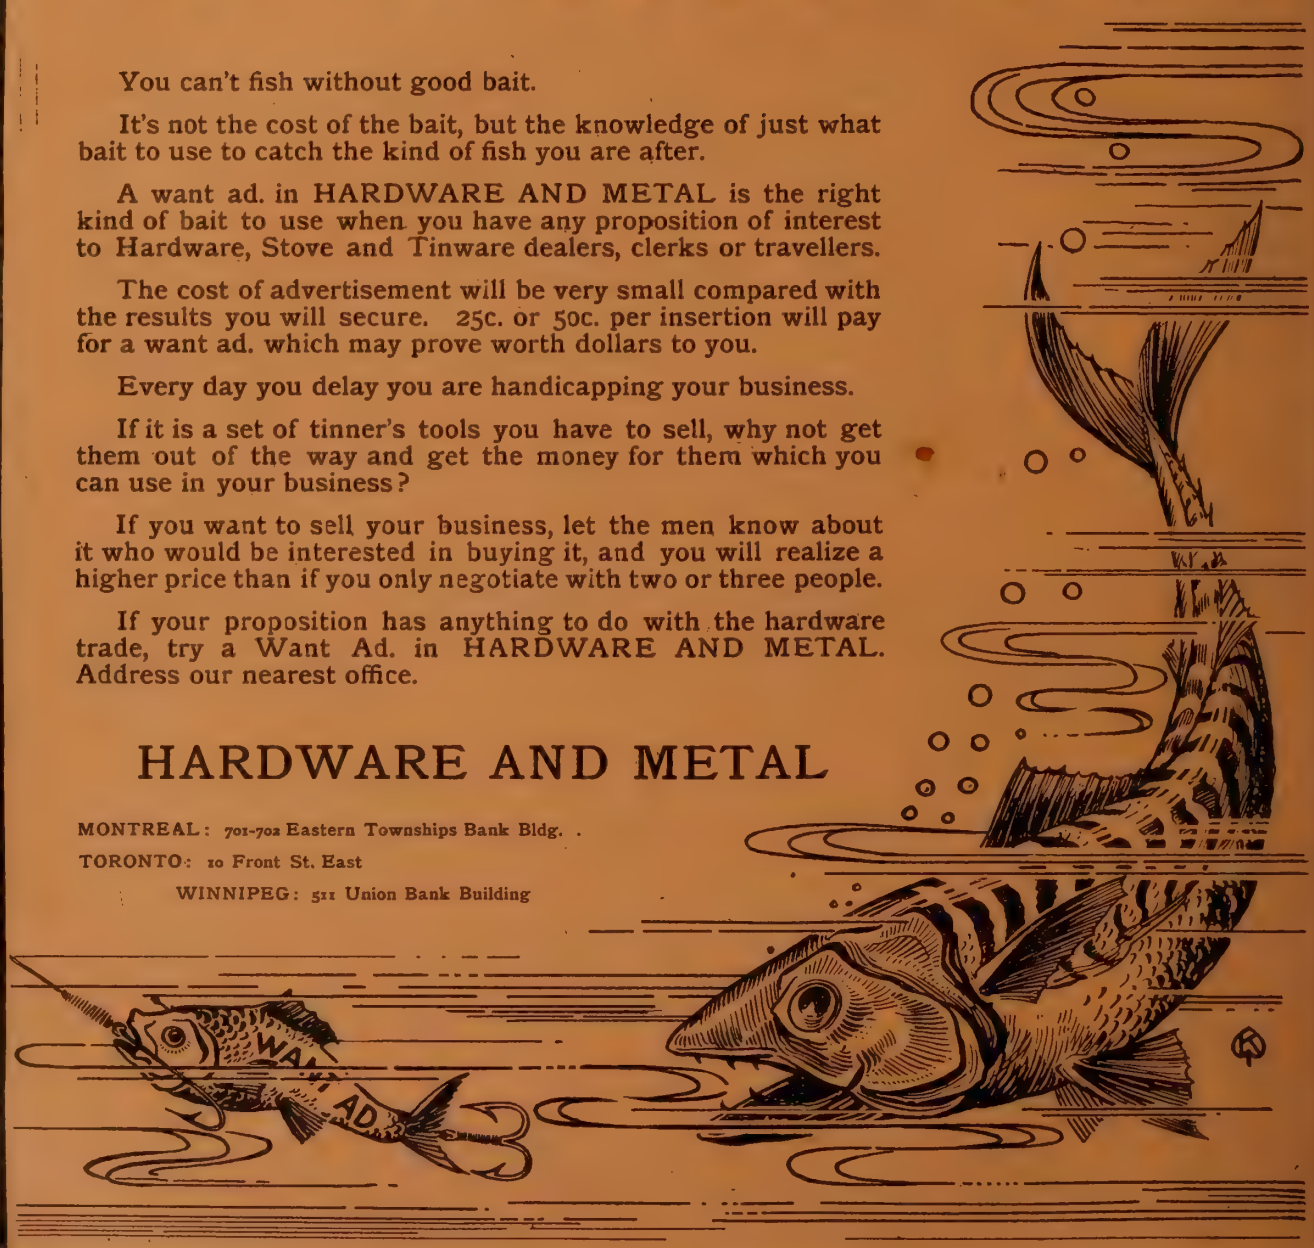
A want ad. in HARDWARE AND METAL is the right kind of bait to use when you have any proposition of interest to Hardware, Stove and Tinware dealers, clerks or travellers.

The cost of advertisement will be very small compared with the results you will secure. 25c. or 50c. per insertion will pay for a want ad. which may prove worth dollars to you.

Every day you delay you are handicapping your business.

If it is a set of tinner's tools you have to sell, why not get them out of the way and get the money for them which you can use in your business?

If you want to sell your business, let the men know about it who would be interested in buying it, and you will realize a higher price than if you only negotiate with two or three people.



If your proposition has anything to do with the hardware trade, try a Want Ad. in HARDWARE AND METAL. Address our nearest office.

"A satisfied customer means many sales."
—The Philosopher of Metal Town.

CORRUGATED IRON

Three Points of Superiority in Our Galvanized Corrugated Iron:

Only the finest COLD-ROLLED steel is used, because cold-rolled steel is a much tougher and finer material than the hot-rolled article.

The steel, to pass our rigid inspection, must be properly galvanized—guaranteed a perfect, even, bright coat. The poorly coated material is not as good as painted black iron.

Then the corrugations of our corrugated iron are absolutely uniform. They are PRESSED ONE AT A TIME, not rolled; for with the rolling process the corrugations are not uniform, and will not fit accurately.

It's absolute perfection in workmanship and quality of material used that makes *our* galvanized corrugated iron SUPERIOR TO ALL OTHERS.

Flat or curved—galvanized or painted.
Any size or gauge.

Our special prices on car lots or season's requirements will interest you. Send for our new catalogue—No. 70. It contains interesting information on the roofing question.

Graham Nails are the Best

There Are the Best Kind of Profits for You in Handling the Disston Line

YOU know how it is yourself—you always buy again from a manufacturer who has proved the honesty of his goods. You are sure of this when you recommend a DISSTON SAW OR TOOL to a new customer—he'll come again to buy. Those dealers who begin trading with DISSTON stay with DISSTON, so that now the DISSTON PLANT (the largest saw-making plant in the world) covers 50 acres. Just so surely will your business grow, and your profits increase by handling the same product that DISSTON handles—DISSTON Saws (the saw you see from sea to sea) and DISSTON Tools and Files.

FREE A postal will bring you the latest DISSTON catalogue, beautifully illustrated. It may be the means of increasing your profits.

WASHING MACHINES THAT SELL

¶ The "Maxwell Line" of Washing Machines has recently had a notable addition -- the "Champion High Speed" Washer, illustrated below. There is now a Maxwell Washer to suit every taste and every purse. When you handle the "Maxwell Line" you need fear no competition.

The "Puritan" Washer has become a great favorite throughout the country. Thousands have been sold, and the "Puritan" is recognized as the leader of its type.

The "Puritan" Motor Washer is a comparatively recent addition to our line, and one which has taken splendidly wherever there are water-works. The motor is very simple, very strong and very durable, and works under a low pressure. Costs absolutely nothing for power in most cities and towns.

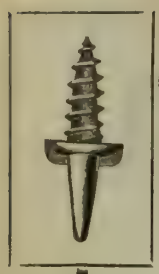
The "Champion High-Speed" Washer has the same tub and dolly-board as the "Puritan," with an improved driving mechanism. The heavy "momentum" wheel runs very fast, gaining a force which is used to carry the dolly-board through the hard parts of the stroke, making the machine run very smoothly and easily and do quick work.

The "Blue Belle"

is a new and improved machine of the "rubbing" type—a type which many prefer. The tub revolves in one direction while the upper board turns the other way, making it very fast. Mounted on a light but rigid angle-iron frame, with adjustable wringer stand.

The "Spotless"

is a new box machine, also of the rubber type. Clothes are rubbed on both upper and under sides. A good low-priced machine.



Write for full imformation and prices on our

Washers, Wringers, Mangles, Churns, Lawn Mowers, Wheelbarrows,

etc. etc.

Sell Clark Heaters and Coal

Here's the "BIG HIT" Assortment

2 Leader Heaters
2 No. 5B Heaters
2 No. 7D Heaters

6 Dozen Clark Fuel Brickettes (Best Grade)

Some of these heaters you can sell as low as $1.20 and make a good profit.

The Proposition to Dealers is Mighty Interesting

Its a proposition that means ready sales and liberal profits.

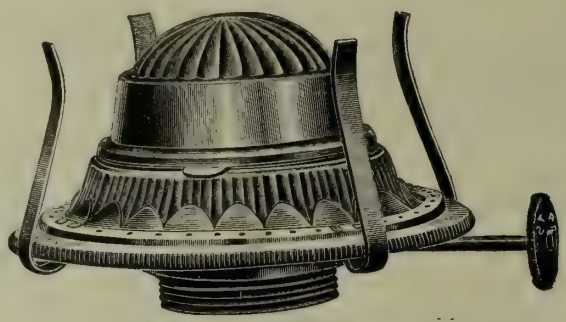
Everyone who drives or owns a carriage, wagon, sleigh, automobile—any kind of vehicle—needs them. Everybody traveling in cold weather needs them. The need is known—the demand is positive—It's for the dealer to supply the product and pocket the profits.

Clark Heaters and Clark Coal sell wherever displayed. The wonderful compactness, the unique principe of heat distribution, the neat appearance, the low price—all are factors that make Clark Heaters the unchallenged leaders.

Our guarantee goes with each, and the guarantee protects the dealer and the consumer.

And the coal is just such another proposition. To **prove conclusively** that it's better than other fuel, we give a guarantee, **with each brickette,** that it will give 25 per cent more heat than any other heater fuel made.

DEALERS——ACT NOW



The season is on. Send for the "Big Hit" assortment and add more dollars to your profit. Send to your jobber. Put a heater just inside your store—where customers can **feel** the goodness of it. "Warm them up" to the necessity of buying from **you.** We'll help.

HOLIDAY PRIZE COMPE-TITIONS

SIX PRIZES FOR WINDOW DISPLAYS

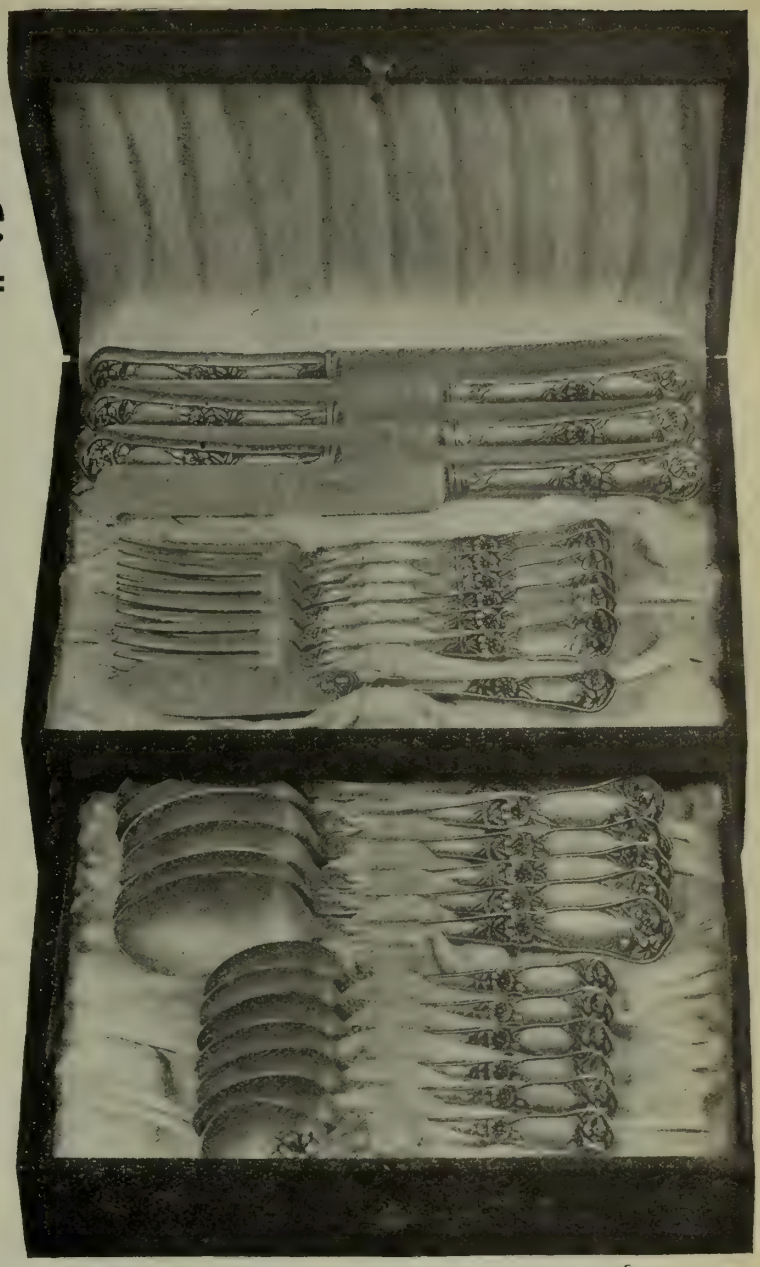
For the three best selling window displays shown in a city over 10,000 population, and for the three best in towns and villages under 10,000 population.

In each division there will be three prizes as follows: 1st, $5 in cash; 2nd, and 3rd, copies of "Hardware Window Dressing" (cloth bound) $2.50—making in all six prizes, totaling in value to $20.

To enter the contest send a clear photo of one or more Christmas windows, made up of articles usually sold in hardware stores, with a description and the name of the person who arranged the display. Photos must be mailed to us by December 31.

TWO PRIZES FOR HOLIDAY ADS.

Two prizes of $5 each are offered for the best newspaper advertisements about Christmas goods, such as cutlery, silverware, sporting goods, lamps, stoves, carpet sweepers, household goods or other holiday lines. Forward one or more clippings from your local paper to us, with the name of the writer of the advertisement, and the name of the paper it was clipped from. As in the window competition, a division is made, one prize being open to those in cities over 10,000 population, and another to those in smaller places.



With the ad. send a copy of any booklet issued, and a description of any special selling plans or display features used during the holiday season.

The awards will be made by experts, and will be announced, with reproductions of the prize ad, and windows, shortly after the close of the contest. All entries should be mailed not later than December 31.

Address: "The Editor HARDWARE AND METAL," 10 Front Street East, Toronto.

GENASCO
THE STANDARD OF EXCELLENCE
TRADE MARK

Why It Pays

It pays to sell Genasco Ready Roofing because—

1. We have created a brisk demand by our continuous campaign of national publicity.
2. The quality of Genasco backs up our advertising statements and doesn't disappoint customers.
3. Genasco is made of Trinidad Lake asphalt, which is bound to give it lasting life.
4. We tell the people what Genasco is made of. They want to know what they pay for—and they have a right to know.
5. Genasco makes satisfied customers and repeat orders, and with a little effort on your part, means bigger business and increased profits for you. Mineral and smooth surface roofing. Backed by a thirty-two-million-dollar guarantee.

Write for samples and full information.

Ready Roofing

ALL THINGS COME TO HIM WHO —GRASPS THE OPPORTUNITY . . .

Just a slight change to an old proverb. The man who waits sometimes misses the mark---it's the man who grasps the opportunity that wins out—and who are the stove winners to-day? It's the hustler and the man who realized his opportunity—and grasped it—"GURNEY-OXFORD," the stove sign that betokens quality—that's the heart and soul of the brightest stove proposition. Back of that proven quality you have a firm that has the goods---the kind your trade demands. Don't say "guff" until you've proved us. It's not too late yet. Get our catalogue as a "feeler"—its worth having—a post card will bring it post haste to you. A mighty helpful service awaits you—there's a bigger, brighter future ahead for the dealer who'll only seize the opportunity—even Gurney-Oxford betterment.

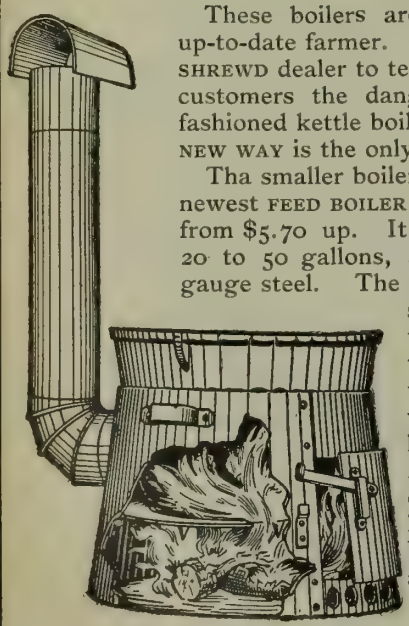
"JEWEL" STOVES and RANGES



The Ideal Jewel Heater With Its New 1909 Dress

Dress does not make the man, neither does it make the stove, but it certainly improves the appearance of both man and stove.
The Ideal Jewel has been on the market for a number of years and proved itself a Perfect Heater in every way. Now, that it has been redressed, it is one of the handsomest and most thoroughly reliable heating stoves on the market.
Mr. Stove Dealer—If you expect your full share of the fall trade you must keep your stock up-to-date. The Ideal has every modern improvement known to the stove trade. With or without oven.

Two Real Farmer's Friends

These boilers are necessities for every up-to-date farmer. It will be easy for the SHREWD dealer to tell his farmer friends and customers the danger of having an old-fashioned kettle boiling in the yard. The NEW WAY is the only SAFE WAY.

Tha smaller boiler, the RUHMANN, is the newest FEED BOILER on the market, and sells from $5.70 up. It has a capacity of from 20 to 50 gallons, and sells on sight. 12 gauge steel. The LARGE boiler is a sure seller, too. It is just what the farmers need, and at this time of the year it will attract. It will boil water in 20 minutes. We have different weights. Approximate weight of of this size, No. 25, 225 lbs. ; of No. 30, 311 lbs. We have 25-gallon pots also, weight, 51 lbs.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, munufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

IT LOOKS SMALL

but there are a hundred little services a "want ad." in Hardware and Metal can perform for you cheaper, quicker, more thoroughly and more satisfactory than can be done in any other way.

It can get a customer for you for any show cases, counters, or any other fixtures you are anxious to dispose of; it can secure for you a set of tinsmith's tools, a typewriter, a silent salesman or any other article which you are anxious to buy cheaply.

The wider your market the better the bargain you will be able to make.

Our "want ad." page will put you in touch with practically every Hardware Merchant in Canada, and out of our thousands of readers it seems reasonable to suppose that there will be some man who is looking for just such an opportunity as you have to offer.

PLYMOUTH ROPE

MADE BY

PLYMOUTH CORDAGE CO ---- PLYMOUTH—WELLAND

¶ A Satisfied Customer is the best advertisement you could possibly have ; therefore you should give each customer the best value for his money.

¶ This, in the case of rope, does not mean the greatest number of pounds for a certain sum, but rather the greatest length, together with the necessary strength and durability.

¶ PLYMOUTH rope is made with this end in view. Costs a little more per pound but will be found cheaper in the end and much more satisfactory. Quality in rope is economy.

¶ The successful dealer appreciates the above facts and demonstrates them to his customers.

Cheaper Fire Insurance for Hardware Merchants

Committee of Ontario Retail Hardware Association Doing Practical Work—Preparing for Campaign in Ontario Legislature—Manufacturers Form a Committee of Insurance Premium Payers to Obtain Fair and Ample Insurance Facilities for Canadians—To Fight Insurance Monopoly Before Dominion Parliament—Several Associations to Assist.

One of the most important questions confronting Canadian manufacturers, wholesalers and retail merchants at present is that of the high fire insurance rates charged by the companies in the Fire Underwriters' Association, and the recent formation of the "All Canada Fire Insurance Federation," composed of representatives of the old line tariff companies, with the object of securing amendments to the Dominion Insurance Act prohibiting the placing of insurance with companies not licensed by the Dominion Government, unless the insurance has been offered to and refused by the companies holding Canadian licenses. Should the Federation succeed in inducing the Parliament and Senate to grant their request, the insurance companies will have a complete monopoly and be in a position to dictate and enforce any rates and conditions they desire, no matter how unreasonable they may be.

At the present time it is illegal for "foreign" fire insurance companies not licensed in Canada to solicit business in Canada. Members of the Canadian Manufacturers Association, however, have been placing insurance through its two mutual companies, and these companies have been alloting the surplus they could not carry to the unlicensed New England mutuals. Business for the "foreign" companies is not solicited, but the manufacturers either place the business direct or give power of attorney to an official of the mutual companies, who recommends the amounts to be allotted the various companies.

Against a Monopoly.

When the insurance bill was before Parliament last winter the licensed Canadian companies sought to bar out the unlicensed companies by placing a tax of 15 per cent. on all premiums for insurance placed with unregistered companies. The bill was held up in the Senate, however, and did not become law. Now the insurance companies are demanding that the new law completely prohibit the placing of insurance with unregistered companies.

Opposition to the proposed monopoly has developed in all parts of Canada, and at a meeting held in Montreal on Nov. 13, a "Committee of Insurance Premium Payers of Canada" was formed, to watch legislation and obtain fair insurance facilities for Canadians. At this meeting the following resolution was passed:

Buy in Cheapest Market.

"That in the opinion of this meeting the right of the individual to insure his risks in whatever quarters he desires should be the first principle in the new Insurance Act; that the prohibitions and penalties proposed should apply only to those companies, associations, or individuals who solicit or who carry on by established agencies an insurance business in Canada; and that a committee be now appointed to prepare the case in support of their views, and to arrange for their proper presentation, in the most impressive, comprehensive, and definite manner possible, to the Parliament of Canada, with a view to limiting the operation of the statute accordingly; and that a second committee be named to confer with the committee first named and to arouse public opinion in the matter, and to procure the active assistance of the press and of the various commercial bodies interested."

Subsequently the two committees mentioned in this resolution were appointed for the purpose of carrying the same into effect, the general committee being made up as follows:

Strong Committees—lc

W. H. Rowley (chairman), E. B. Eddy Co., Ottawa; R. M. Ballantyne, (vice-chairman), Lovell & Christmas, Montreal; R. H. Alexander, secretary C. M. A., Vancouver; Geo. E. Amyot, Dominion Corset Mfg. Co., Quebec; C. C. Ballantyne, Sherwin-Williams Co., Montreal; Cyrus A. Birge, Canadian Screw Co., Hamilton; P. Burns, P. Burns & Co., Calgary; A. K. Cameron, Metal Shingle & Siding Co., Montreal; D. C. Cameron, Rat Portage Lumber Co., Kenora; W. H. Clark, W. H. Clark & Co., Edmonton; N. Curry, Rhodes Curry & Co., Amherst James Davidson, Thos. Davidson Mfg. Co., Montreal; Gordon C. Edwards, W. C. Edwards & Co., Ottawa; Rhys D. Fairbairn, Toronto; E. B. Fetherstonhaugh, Greenshields, Montreal; Wm. Flavell, Lindsay; James Gardiner, Hodgson, Sumner & Co., Montreal; W. M. Gartshore, McClary Mfg. Co., London; C. B. Gordon, Dominion Textile Co., Montreal; John A. Gunn, Gunn, Langlois & Co., Montreal; Frank Hawkins, secretary Canadian Lumbermen's Association, Ottawa; E. P. Heaton, manager Insurance Department, C.M.A., Toronto; B. J. Ker, Canadian Packers' Association, Victoria; Otto Lachmund, secretary, Mainland Lumbermen's Association, Arrowhead, B.C.; Wiliam McMaster, Montreal Rolling Mills, Montreal; Edgar McDougall, Caledonia Iron Works, Montreal; H. McGee, T. Eaton Co., Toronto; S. H. C. Miner, Granby; J. B. Miller, Parry Sound Lumber Co., Toronto; Jos. Quintal, Quintal & Lynch, Montreal; A. E. Rea, A. E. Rea & Co., Montreal; T. A. Russell, Canada Cycle & Motor Co., Toronto; A. E. Silverwood, Flavelle - Silverwood, London; E. F. Suse, Wire & Cable Co., Montreal; J. F. M. Stewart, Point Anne Quarries, Toronto; J. B. Watts, C. B. Watts, Toronto; W. T. Whitehead, Mount Royal Spinning Co., Montreal; C. R. Whitehead, Wabasso Cotton Co., Three Rivers; T. Williamson, Ogilvie Mills, Montreal; J. Wood, Robert Simpson Co., Toronto; with power to add to their number.

The secretary of the Ontario Retail Hardware Association has been asked to accept election to the General Committee. The General Committee will probably be called together when the Insurance Act becomes a live issue in Parliament, and in the meantime a sub-committee, consisting of R. M. Ballantyne, William McMaster, James Davidson, A. K. Cameron, E. F. Sise, E. P. Heaton and John A. Gunn, will arrange the details of the campaign.

Produce Merchants Active.

The Montreal Produce Association has also taken up active opposition to the monopoly sought by the Underwriters Association, the fol-

lowing resolution explaining their position:—

"Whereas, the general fire insurance companies located in Canada are asking for legislation which will tend to confine to or give control of all fire insurance in the Dominion to their own companies to the detriment of all the insured throughout Canada;

"Whereas, the fire insurance companies, known as the regular or tariff companies, have an organization known as the 'Canadian Fire Underwriters' Association,' which association fixes the rates of insurance on any or all property, the members of which association control about 88 per cent. of the total insurance reported to the Dominion Government, and all agree to maintain uniform rates and conditions;

"Whereas, it has frequently been found impossible to obtain all the insurance required from registered companies, which companies frequently limit or refuse the acceptance of risks which do not suit them;

"Whereas, it is not proposed to tax registered insurance companies for reinsuring a portion of their risks with unregistered companies, the insured also should have the privilege of placing insurance with such unregistered companies without having to pay a tax for so doing;

"Whereas, for many years past eventual recourse to Underwriters at Lloyd's, London, or other unregistered concerns, has been the owners' chief safeguard against the excessive rates of a virtual combine, and the only means of placing all the insurance required;

"Therefore, resolved, that this association places itself on record as strongly opposed to any alteration in the insurance laws that will in any way restrict the freedom of our members in securing insurance to the fullest extent of their requirements, or that will deprive the assured of the right of placing such insurance with strong financial companies operating outside of Canada,

What Hardwaremen Want.

The Ontario Retail Hardware Association will, of course, give active support to the opposition to the proposed monoply, as it has a direct bearing on the effort of the Ontario association to organize a hardware mutual fire insurance company.

The Retail Hardware Association, in order to form a mutual company, must secure an amendment to the Ontario Insurance Act, striking out the word "mercantile" in the clauses which give farmers the right to form mutual companies and preventing merchants and manufacturers from doing likewise. Hon. Frank Cochrane, Sudbury; G. C. Wilson, Dundas, and R. R. Gamey, Manitoulin, are three M.P.P.'s who have conducted retail hardware stores and they, with the farmer members who enjoy the benefits of mutual insurance, ought to be able to secure the desired amendment in spite of any opposition the fire underwriters may put up.

But after securing the amendment and organizing a company, the hardware merchants will be in the same position as the manufacturers are now in. They will be able to place insurance up to the limit of $3,000 or $5,000 in their own company but over this amount will have to go to others. Where will they go? If they are securing a rebate of from 25 to 50 per cent. from their own mutual company will they be willing to pay full board rates to the old line tariff companies when they can place up to $30,000 more in the eight successful hardware mutuals across the line, most of which give rebates of 50 per cent. of the premiums annually? The retail hardwaremen, therefore, are likely to want the right to buy their insurance, just as they buy their nails, in the cheapest market. Consequently they are interested in, and will support, the position taken by the manufacturers in opposing the further entrenchment of the insurance monopoly.

ARRANGEMENTS FOR CONVENTION.

A committee composed of Vice-President Ballantyne, Treasurer Caslor, and Secretary Wrigley, of the Ontario Retail Hardware Association, visited London last week and met the local committee which has been organized to make arrangements for the fifth annual convention which is to be held in that city on Feb. 8, 9, 10 and 11 next.

After looking the halls over it was decided that the Board of Trade rooms would be too small to hold the convention and arrangements were, therefore, made to secure the banquet hall in the Masonic Temple, immediately adjoining the City Hall, where the hardware exhibition is to be held.

Arrangements were also completed for the holding of a "Made in London" show of hardware goods in the City Hall Arcade below the exhibition, the front part of the Arcade being arranged in the form of a hardware store with a model store front, silent salesmen, shelving and other fixtures.

The Tecumseh house was also selected as convention headquarters and circulars will be issued to exhibitors and the trade as to the special rates quoted.

Local committees are now at work completing the arrangements for the convention and preparations are being made to entertain at least 400 retailers and representatives of manufacturing houses.

The gathering seems likely to be larger and more successful than anything of the kind ever held in Canada.

AN INSURANCE INQUIRY.

The Mutual Insurance Committee of the Ontario Retail Hardware Association will hold a meeting in Toronto next week to make arrangements for the campaign in favor of amending the Ontario Insurance Act.

The committee has been gathering information regarding the workings of the hardware mutual fire companies across the line and have also sent forms to every hardware merchant in Ontario, asking for information as to the rates charged, etc. In case any hardwaremen have been overlooked they can fill in the form and return to J. Walton Peart, St. Mary's, convenor of the committee. The form is as follows:

What insurance do you carry (a) Buildings, $ (b) Stock, $

What are stock company rates
(a) Buildings, per cent.
(b) Stock, per cent.

In the event of our organizing for Mutual Insurance, would you insure to the limit of policy ($3,000)? If not, state what amount you would carry with a Hardware Mutual Company .....

Do you insure on co-insurance plan? .....

Have you had any fire losses within the past ten years, and what percentage of the total insurance was paid to you?.....

Have you any general suggestions to make regarding fire insurance?

.....

The Evolution of the Show Window

The Modern Merchant has his Window Well Lighted and Takes Full Value of the Advertising Opportunity — A Mechanical Window at Goderich.

In the evolution of business methods there is no feature to which more attention has been bestowed than upon the show window of mercantile establishments. It is yet within the recollection of not very old men when, the business for the day being over, the window, which served as much for the purpose of providing light as for the display of goods, was securely walled up by shutters, barred and bolted. The nocturnal pedestrian groped his way along the busiest thoroughfares with such light as the flickering gas or spluttering oil lamps afforded, with not so much as a glimmer from the barricaded windows of the average store to cheer the loneliness. The shutters have long since been relegated to the woodshed for kindling; the shop windows have expanded until they have crowded out brick walls; the gasfitter and the electrician, particularly the latter, have drawn upon their ingenuity to produce illuminant effects, and the show window evolved is a thing of beauty and a joy forever. The tradesman has learned the value of the display made possible by the glare or subdued effect of the incandescent or frosted globe. The show window has become the most forceful and tangible advertisement of his business. He recognizes it as an indispensable asset and he expends hundreds if not thousands of dollars annually in its embellishment. This display window idea is not confined to any particular line of trade, but is generally utilized to attract the attention of the passing throng with an alluring intent and prospective profits.

MOVING WINDMILL WINDOW.

A display which attracted considerable attention at Goderich a year ago is reproduced in the accompanying illustration. It shows a windmill, on which electric lights are fitted, which revolved from power developed by running water flowing over the tray and onto the water wheel, the water then passing along a canal across the front of the window, with fishes swimming in the water. The background is a cottage constructed of building paper painted to represent stone, the windows being boards covered with pocket cutlery. To the side is foliage and on the base of the window and in front of the canal are articles of silverware and other goods suitable for holiday gifts.

Mechanical Windmill Window, D ressed by R. W. Craigie for C. C. Lee, in Goderich, last December.

HOW TO WASH WINDOWS.

"Perhaps my experience in teaching my help how to wash the show windows may be of interest to others," writes a hardware clerk. "Strange as it may seem, there is a right and a wrong way to wash windows, and as this operation is usually dreaded, the following method will, doubtless, be appreciated, as it saves both time and labor:

"Choose a dull day, or, at least, a time when the sun is not shining on the windows, for when the sun shines on the window it causes it to dry streak, no matter how much it is rubbed. Take a painter's brush and dust them inside and out, washing all the woodwork inside before touching the glass. The latter must be washed slowly in warm water diluted with ammonia—do not use soap. Use a small cloth with a pointed stick to get the dust out of the corners; wipe dry with a soft piece of cotton cloth—do not use linen, as it makes the glass linty when dry. Polish with tissue paper or old newspaper. You will find that this can be done in half the time taken when soap is used, and the result will be brighter windows."

TORONTO RETAILERS MEET.

A meeting of the Toronto Retail Hardware Association was held on Wednesday night in Temperance Hall, Bathurst street, and, considering the short notice, the attendance was very satisfactory. A very interesting discussion took place on store methods and a desire was expressed that similar discussions take place at future meetings.

It was decided that no meeting be held in December owing to the rush of holiday trade, and that immediately after New Year's President Pearsall and Secretary Harding, issue a call for another meeting

Planning the Holiday Advertising

H. U. Tibbens, in Brains, Makes Some Practical Suggestions from the Advertising Manager of a Large Retail Store.

The wise advertising man is already laying his plans for the coming holiday campaign. Christmas is the harvest time for merchants, and all energies are bent toward inducing the greatest volume of business at the Yuletide season.

In general, holiday advertising is more or less haphazard, due to the fact that so many things are left until the last minute and then have to be done with a rush or not done at all. It is with the idea of overcoming, to some extent at least, this tendency that this article is written so far ahead of the Christmas season.

Advertising managers should consider carefully what they wish to do in the publicity line at holiday time and have everything ready to swing into Santa Claus talk by the first of December, at latest.

A good plan is to go over the ads. of previous years and determine the general style and cost of the compaign. If the firm's publicity admits of the use of cuts, get busy on these and have them in hand and ready to use when you need them. If special border, head pieces, signatures, eye catchers and special designs are needed, have them made up at leisure before everybody is rushing artists and engravers. In this way you will get better work—and it will not cost anything extra either, as rush jobs often do.

Generally the advertiser, who is in the newspapers all the time increases his space as the holidays approach, while the non-advertiser takes a flier in type during the same period and then drops out as soon as Santa Claus has made his rounds. There is a class of advertisers—not so large as the others mentioned—who reason that at Christmas time they will have as much trade as they can take care of without any extra advertising, hence do not increase their advertising expenditures. Persons who have given this matter some thought have reached the conclusion that both classes are partly right and partly wrong and that a solution of the holiday problem is a happy medium — a combination or modification of both systems. This means that the advertising appropriation will be spent to the best advantage.

For many years merchants and newspapers have been advising early shopping, but experience shows that it is hard to get the average citizen into the buying mood until the last minute. But because a thing is difficult it by no means follows that it is impossible, and here is where the combination advertising plan comes in.

Begin by taking generous space and whooping things up at a lively rate, with plenty of talk about early buying and the advantage of securing the first choice of the finest things — the cream of the holiday offerings. It is best in the early part of the campaign to feature the larger and more expensive articles—the things which appeal especially to the well-to-do, who have the money to buy at any time. It is a good thing to dwell upon the advantage of giving useful tokens if the merchant does not carry a line of strictly holiday goods.

Probably ten or twelve days before Christmas the ads. should be tapered down, taking advantage of the cumulative effect of the work already done and also because along toward Christmas people rush into the stores at the last minute, never consulting the advertising columns of the papers—intent only on doing the shopping in some way that should have been leisurely attended to two or three weeks before.

This is the policy to be followed. If at any time business shows signs of falling off, give it another dose of advertising medicine. It is almost needless to say in this connection that the goods selected for exploitation toward Christmas should be those of a purely gift nature and things which have shown signs of "sticking."

It may be necessary to cut prices on some slow-moving lines to keep them going, but that happens on every sort of merchandise twelve months in the year, so no merchant should hesitate to put the knife into prices on slow sellers and sacrifice profits rather than carry a line over Christmas. Selling a lot of stuff at cost or near it the week before Christmas is much preferable to selling it for a good deal less than it cost the week after.

In conclusion then: Use your largest spaces early in December, tapering down the ads. as you see the store is doing all the business it can handle, anyhow, just before Christmas. Talk early buying and morning shopping and in the end the results will be far better than under the plan generally followed.

Aim to better your best and your 1909 advertising will be far ahead of any you have done previously.

W. H. Jones, who for the past twenty-one years has conducted a very successful hardware business at Ingersoll, has disposed of his business to T. N. Dunn. Mr. Jones is going out west.

OUR HOLIDAY CONTESTS.

It is an undisputed fact that window displays and newspaper advertising are valuable in selling holiday goods. By using these two methods in getting business, therefore, hardware merchants are following along lines of least resistance to their own financial advantage.

In dressing your Christmas window, a little extra trouble, will make it the best you ever had. Encourage your clerk to try for one of the prizes offered by Hardware and Metal for the best Christmas window displays, photographs to be sent us not later than December 31st.

Following last year's precedent, window dressing contestants will be divided into two classes:

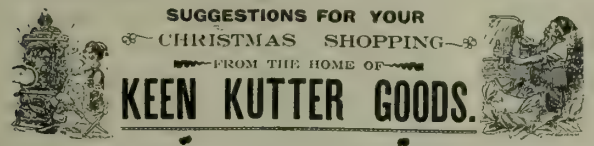
For the best selling window display shows in (1) a city over 10,000 population, and (2) in towns and villages under 10,000 population.

In the window display contest in each case there will be three prizes as follows: 1st, $5 in cash; 2nd and 3rd, a copy of "Hardware Window Dressing," sold at $2.50 each.

To enter the contest send a good, clear photo of one or more Christmas windows, with a description and the name of the person who arranged the display.

We also want copies of the special holiday ads you run in your local papers during the Christmas season with a view to booming holiday trade.

The advertisements submitted should be about Christmas goods regularly sold through hardware stores. Forward one or more clippings from your local paper with the name of the writer of the advertisement, and the name of the paper it was clipped from. There will be two prizes of $5 cash given to the winners, one in the cities over 10,000 and the other in the towns having a smaller population.



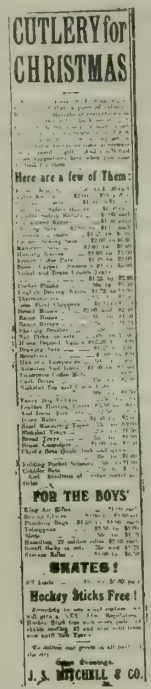
The awards will be made by specialists and will be announced with reproductions of the prize winners, shortly after the close of the contest. All entries in each case should be mailed not later than December 31, to the Editor of Hardware and Metal.

DISPLAY SHELVES IN WINDOWS.

Mirrors and polished plate glass shelving, with rounded edges and supported by neat brass or bronzed brackets, give a refined and finished appearance to a store that appeals to the better class of customers. The mirrors and plate glass shelving have the further advantages of reflecting the goods and so enhancing the effect, while at the same time increasing the apparent volume of the display. This is particularly noticeable when artificial light is used, as at night time. It is for every dealer to decide for himself how far he can go in fitting up his store with these more or less costly accessories.

One needn't be a genius to be able to dress a window properly—the necesary requisites are common sense, with an application of your knowledge of business, art and human nature.

Price the goods displayed whenever the price is an attraction.



Nothing will make any woman (and the whole family) happier on Christmas Day than to eat that turkey roasted in a "SUMMIT" (4 hole) or "MARVEL" (8 hole) Champion the only ranges made with this cross grate. There are 80 happy homes in Oshawa and vicinity NOW in which these Ranges are used. See our list of users.

OPEN EVENINGS TILL 9

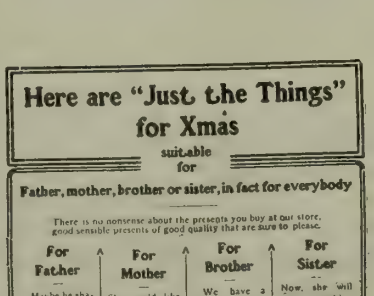
"If It's Hardware, We Have It."



Some Ads. Used by Canadian Hardware Stores to Advertise Christmas Goods a Year Ago.

Suggestions as to What To Do In December

Merchants Should be Early in the Field for Holiday Demand — The Benefit of Strong Advertising — An Abnormal Sized Present in Window Proves a Good Eye Catcher—Staple Lines are Good Gifts.

Next month hardwaremen will be coping with their holiday trade—the first part in preparing for the demand, and the second in supplying it, and their success will be in due proportion to the amount of forethought they have applied to their campaign. In Hardware and Metal's Christmas trade number some weeks back, we urged upon merchants the necessity of being early in the field—early with the ordering of the stock, early with the advertising, and early with the display. It may mean all the difference between success and failure. The holiday trade is different from the trade that the merchant meets with generally throughout the year. It has special features of its own—features needing careful attention. It is a trade that has to be carefully fanned and carefully solicited, as it can be supplied elsewhere. The merchant is tendering for a demand that is keenly sought for by others, and therefore he must bring into play all the forces at his command. And one of his best forces is being early in the field.

Example of Shortsightedness.

In the Hardware Dealers' Magazine there appeared a short editorial with a moral which will bear telling. It was as follows: There was a young newspaper reporter who was sent to write on the wedding of a fashionable belle to a prominent club man. In an hour he returned, sat down at his desk, and began to read a newspaper. "See here," shouted the city editor, "why, don't you rush that wedding report." "Nothing doing" said the reporter. "Nothing to write about. The bride was at the altar, but the bridegroom failed to show up." This illustrative anecdote recalls to mind the hardware dealer who fails to make good profits out of the holiday trade. Nothing doing! Yet the crowds are on the streets by the end of November looking for holiday goods. They are in the department stores, the jewelry stores, the book stores. If they are not in the hardware stores it is because the dealer has not baited his windows, his announcements, his advertisements, in the proper manner. Nothing doing! Yet men, women and children are spending thousands of dollars in every day of the holiday season. They are buying silverware, leather goods, household utensils, sporting goods, sleds, skates, glassware and toys. If they are not buying them of the hardware store, it is because they have been steered, lured, led, argued, pushed in another direction. Nothing doing! Yet a lot is doing in the store across the way, next door, and up the street. The goods above named belong legitimately to the hardware dealer. If he allows some one else to beat him on his own ground, and at his own game, it is because, like the young reporter, he does not know a good thing when he sees it.

Advertise Strongly.

Presuming that the merchant has his stock in by the commencement of the month, and that is none too early to take full advantage of any new lines and novelties being carried, he should start at once to inform the community of the many and varied lines he is carrying for their special delectation. He must run no risk of hearing the comment, "If I had only known that you were selling this, I would not have bought my present from So-and-So." Circularise the community with catchy announcements, advertise in the newspaper, and towards the middle of the month double the size of the space, taking care not to have a dull line of reading. Let the ads. be interesting, so that each issue of the paper will be read first for the hardware ad., and then for the news of the day. Have some printed matter to give away to each customer, and be careful to see that the matter is enclosed within the parcel, and not handed to the customer, or made a wrapper for the parcel itself. Very few people have time to read, nor care to read, printed matter on the streets, and the first thing that is done to the advertisement is to throw it away, while the women folk object to carrying anything but a plain paper parcel. Put the matter inside so that when the parcel is untied at home the advertisement can be read at leisure.

A Good Window Idea.

Then the merchant can devote some of his window space before he actually commenced to display his holiday wares with some card announcements calling attention to the fact that Christmas buying is spoilt unless done carefully. "Be warned and see what I have before you select your gifts," would be a good line.

A very strong advertisement is to have something in the window of the nature of a present, but of unusual size. Being out of the ordinary, it would at once attract attention, even that of the man who is hurrying to catch a train. For instance, the whole window could be taken up with a huge cardboard representation of the face of a watch with the hands, if possible, moved by a little mechanical arrangement. This dial could be suspended from the ceiling by a chain of colored festoons, or of other objects suitable for presents, such as knives, razors, plated spoons and forks, and so on, held together by invisible wire. Across the dial should be inscribed the words, or something to the same effect,—"This is the store for Christmas presents. Come in, and see them. Watch how the time flies. Do not leave your buying until the last 'minute.' Come in now, and take your choice." Such an eye catcher not only tells its tale in a "second," but identifies that store with Christmas presents.

Must be Enthusiastic.

As we have pointed out before, when the merchant makes his real display, he should do so in no half hearted way. Let there be no doubt in the mind of the customer that so far as the store is concerned this is Christmas time. The walls, the counters, the show cases, the windows, and the smiling faces of the staff should be indisputable evidence of the festive times. The store should radiate good cheer, and directly the customer opens the door he should experience such a Santa Claus feeling that his fingers will be hungering to touch his money.

In our holiday number we went exhaustively in the question of window display, and the interior treatment of the store. We need, therefore, only to reiterate the necessity

of having a warm cloring to the store, and the showing of all the lines that are carried. Have them set out so that they can be easily inspected, for buyers of presents like to carefully inspect the goods before making a choice, and be careful not to force a sale on anyone who does not seem disposed on that occasion to buy. On the other hand have a sufficient staff to look after all who wish to purchase. Being pressed to buy when not disposed to is as irritating as having to wait for a clerk when one wants to buy. Hardware merchants do not make enough use of the ideas of storing presents for people. Many would buy early if they could have the articles held for them, and especially in the case of bulky gifts, such as sleds, wagons, and other children's toys. Secrecy is the greatest charm of present giving, but this is hard to obtain in a house where there are children, if the articles have to be stored for any length of time. The merchant, too, should look carefully after his delivery system, for it will have to do double duty.

Staple Lines Make Useful Gifts.

If the merchant goes into the battle well prepared, we venture to say that there will be "something doing." He will do a trade that will surprise him, and make him think of the many Decembers that he has wasted away. The hardware store is just as good as any other store for Christmas presents, in many respects it is much better. Many of the staple lines of hardware make most useful presents, and useful presents are the most appreciated in the long run. Then again, it is such a small step from these staples to a multitude of other more fancy articles that are in demand at this time of the year. Surely the hardwareman has more right to silverware than the jeweler. Cutlery and silverware are too closely allied to be parted in purchasing. Bathroom fittings, and razors, shaving sets, manicure sets, and soap are also connected and so on. The time has gone by when the hardware store was thought out of the running so far as presents were concerned. It is now one of the foremost competitors and if the merchant sets about it in the proper way he can make his store the foremost. Let him try.

HARDWARE TRADE GOSSIP

Quebec.

N. Larose, of Vercheres, Que., has been on a business trip to Montreal.

T. Gagnon, St. Stanilas, Que., has been doing some hardware buying in Montreal.

Tom Hall, of the Hall Engineering Works, Montreal, is on a business trip to New York.

J. H. Plummer, president of the Dominion Iron & Steel Co., Sydney, has been staying in Montreal.

A. Desjardins, St. Joseph du Lac, Que., has been a caller on the Montreal hardware trade.

George McAvity, of T. G. McAvity, hardware merchants, St. John, N.B., has been on a visit to Montreal.

Watson, Jack & Co., Montreal, have moved from the Bell Telephone building to 709 Power building, 83 Craig Street West.

J. A. Farrell, president of the United States Steel Products Export Co., whose Canadian headquarters are in Montreal, has gone abroad.

P. R. Hanson, formerly with the Canadian Rubber Co., of Montreal, and then manager at St. John, N.B., has joined the Dunlop Tire Co., Montreal, and will cover the same territory.

T. H. Newman, member of the firm of Caverhill, Learmont & Co., Montreal, who has been down with pneumonia, appeared at the office this week, receiving the congratulations of the staff at his recovery.

The Corrugated Steel Pipe Co., of Sandusky, Mich., have established plants at St. John's, Que., and Stratford, Ont., to manufacture steel culvert pipe, from 8-inch to 7-feet. The Canadian name of the company is the Dominion Corrugated Steel Pipe Co.

The annual meeting of Lewis Bros. Hockey Club was held on Saturday, and the following officers were elected for the coming season: President, C. F. Smallpiece; vice-president, C. J. Walker; secretary-treasurer, O. D. Ellis; manager, E. B. Ryan; captain, T. Le Blanc. The club has entered a strong team in the Wholesale Hardware League, of Montreal.

Ontario.

J. G. Lewis, of Lewis Bros., Montreal, spent a couple of days in Toronto on business this week.

M. F. Ainslee, Drumbo, father of S. F. Ainslee, buyer for Rice, Lewis & Son, Toronto, died last week.

Jack Woodward, hardwareman at Cannington, was married on Wednesday morning last to Miss Ethel Halward.

George H. Pedlar, junior, of the Pedlar People, metal roofing manufacturers, Oshawa, died in a Toronto hospital ten days ago.

Findlay Brothers, manufacturers of stoves and ranges at Carleton Place, have reduced their employees' salary 10 per cent.

Mr. Hayden, of 121 Maitland St., Toronto, formerly with Rice Lewis & Son, that city, has returned to his home from Calgary.

The Brantford Collegiate Institute board has recommended that the Expanded Metal Co.'s tender for fenestra sash at $410 be accepted.

The Wood-Vallance Co., Hamilton, is substituting gas for electricity in its warehouse, owing to a dispute with the Cataract Power Co.

J. H. Richards, hardware, merchant, Frankford, has sold his hardware business to the Foster-Latta Hardware Co., and intends removing to Havelock.

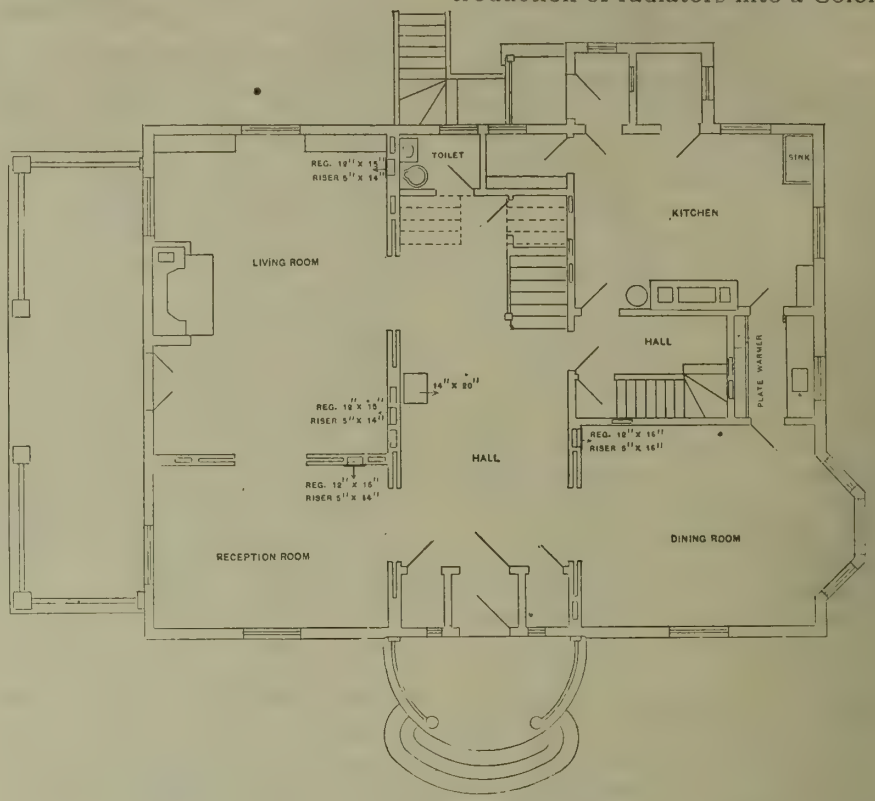
The Ontario Brass Rolling Mills, New Toronto, are again in operation, the plant having been thoroughly overhauled by the new proprietors. Brass rods and sheets will be produced.

On November 9, Jas. Brennan, foreman of the Plow Department of The Percival Plow and Stove Co., Merrickville, completed 50 years active service for the firm. Starting in with Magee & Pearson and continuing on with them until they sold out to The Percival Plow Co., Mr. Brennan has worked continuously, and has hardly ever lost a day.

Western Canada.

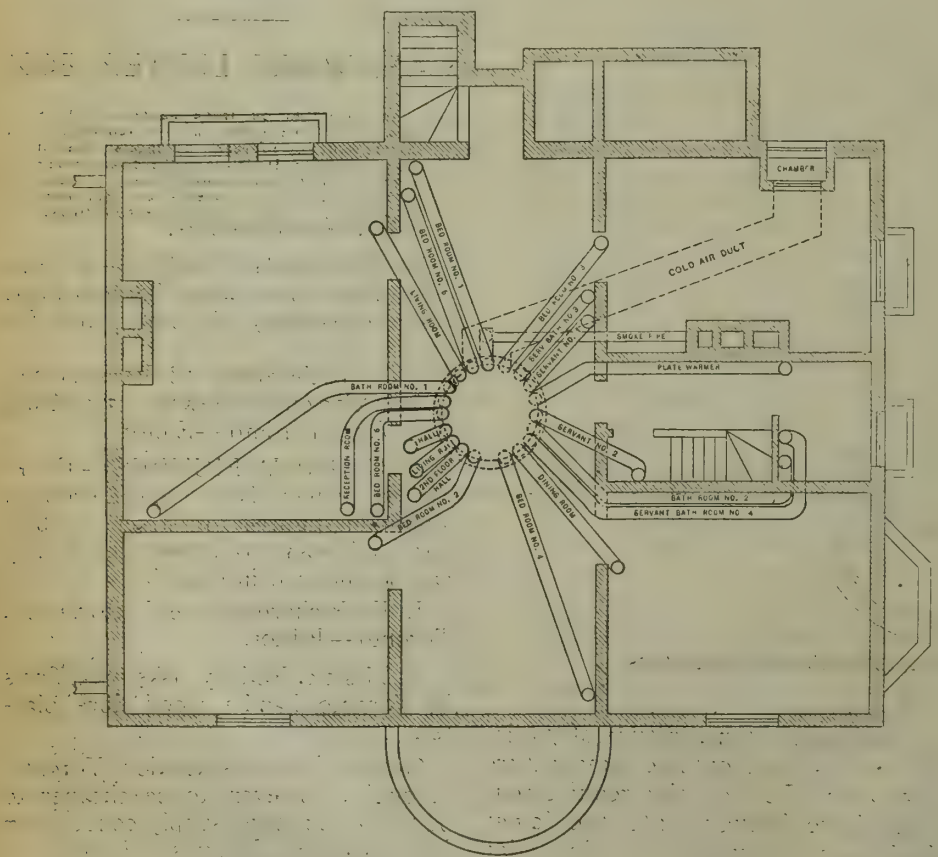
Joseph Mielhauson, hardwareman, at Govan, Sask., is succeeded in business by Dickie & Anger.

Maritime.



Fred D. Corbett, a prominent and wealthy citizen of Halifax, and at one time in the employ of Albro, Son & Co., hardwaremen, died at that place last week.

Wiliam McArthur, Sussex, N.B., who has represented the S. Hayward & Son hardware house, St. John, on the road, has decided to sever his connection with the concern and locate in Vancouver, where he has been offered a good position. Mr. McArthur will leave for the west the first of the year. He is one of the best known and most competent hardwaremen on the road in the maritime provinces.

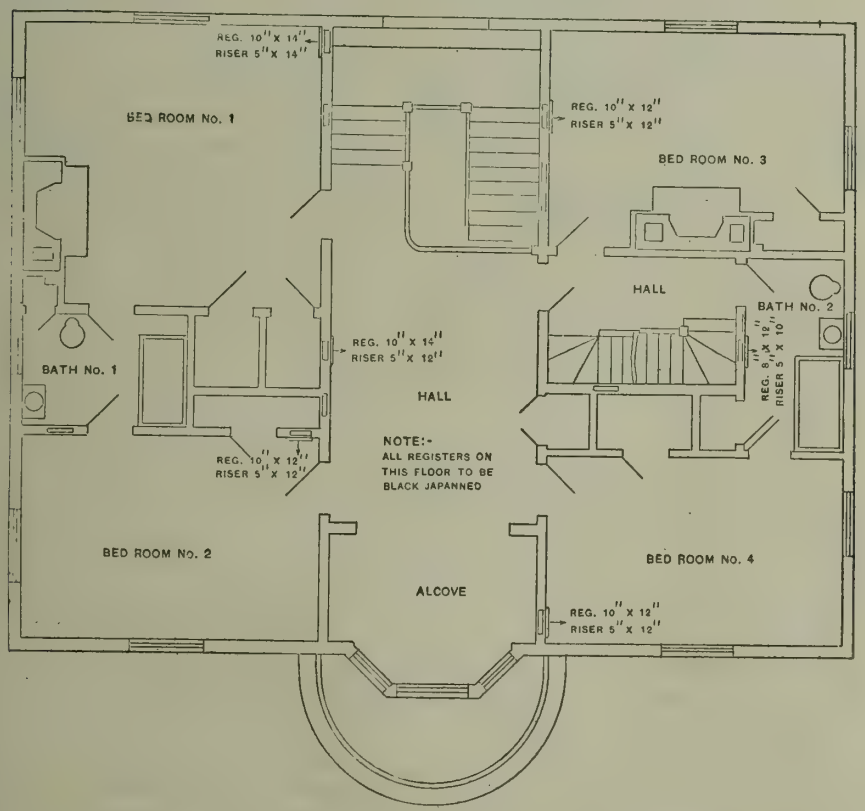


Furnace Heating in a High Class Residence

P. H. M'Carthy, of the Federal Furnace League gives an Example of the Warm Air Furnace in a House of Architectural Excellence — Utilizing the Warm Air as a Plate Warmer.

The interest in attractive homes was never greater than at the present time. This interest is promoted by the reproduction of photographs of high class residences in the leading home magazines. Besides the descriptions of these residences, interesting articles are written on the exterior and interior arrangements and the interior decorations and the like. At this season of the year the question uppermost in the minds of all is a means for comfortably warming these homes. As an apparatus which distributes its heat through the various rooms from one central source has to be installed, it is a vital question to decide which method will furnish the maximum service for a minimum cost. With the artificial heat furnished, a means of obtaining ventilation must be considered, as during the cold weather when one-half or more of one's time is spent indoors with doors and windows closed, the kind of air we breathe chiefly determines the state of our health. When a residence is planned in accordance with some historical style or period, the architect is usually required to so design his rooms or apartments that they can be arranged and decorated harmoniously with that time. The introduction of radiators into a Colonial period design is not only inconsistent but mars the effect of the decorative scheme intended.

First Floor Plan, Showing Location of Registers.



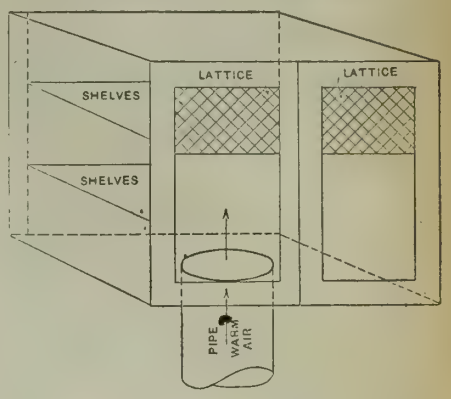
Basement Plan, Showing Pipe Arrangement.

What a heating contractor or reputation can accomplish in a case of this description is best shown in the accompanying plan of a warm air furnace system of heating, which has been installed in a residence built on old Colonial lines. When the plans were being arranged the owner and architect called in the heating contractor to lay out a system of heating that would be in accordance with the conditions. The objections to direct steam or hot water circulation were directed against the radiators from an artistic standpoint, and the attendant noises of various kinds in the pipes and radiators and the tendency to overheating in mild weather. In submitting his estimate the heating contractor furnished complete plans and specifications.

The house is a fine example of its type of architecture. It is built of wood and the first floor has a spacious hall with a large reception and living room on one side with an attractive dining room on the other,

all of which have large sliding doors, so it is possible to put them into immediate communication or to isolate them as desired. In the rear is located a large kitchen and a good sized pantry. From the main hall the staircase ascends to a landing, and from there to the second floor hall, in front of which is a large alcove with three large windows. At the landing and extending to within a foot of the ceiling of the upper hall is a large decorated window. These large glass exposures had to be considered seriously with regard to the best heat supply for the main hall. On the second floor are four large chambers and two baths. The upper story is divided into the servants' room and bath, with three extra chambers and a storeroom.

The house faces the east and the cold air inlet is located in the northwest corner, with a free, unobstructed opening. This inlet opens into the cold air room, with a hinged window which can be regulated from the cellar. On the inside wall of the cold air room is another window, so that in extremely cold weather the air can be taken from the inside



Second Floor Plan, Showing Location of Registers.

if desired. The cold air duct is underground, built of brick, clean and tight, and leads into the cold air pit underneath the furnace directly from the rear. The furnace is located in the centre of the building and under the main hall. The smoke pipe is carried to a separate chimney flue, which is located on the sheltered side of the stack.

To select a furnace of such size that it would have ample reserve power to heat the building in the coldest weather, especially when it was found that 19 separate pipes were required, was a problem. Finally a No. 830 calorific furnace, which has about 55 sq. ft. of heating surface to 1 sq. ft. of grate was installed. It will be noted on the cellar plan that the heating contractors accomplished the placing of the pipes, and have also been able to do so without the necessity of carrying any one pipe across the top of the furnace. All pipes are aligned and brought directly to the risers.

Good results from a heating system in most cases are judged by the warmth of the hall, living, dining room and bathrooms. With this view in mind the heating contractors had first to consider the main hall, with its landing, the upper hall and the alcove, which space would require a large volume of warm air to maintain a temperature of 70 degrees when the outside temperature was zero. To meet this requirement they have brought into the lower hall from the furnace a 14-in. cellar pipe, 3 ft. 6 in. in length, into a floor register 14 x 20 in., and for the second hall a 10-in. pipe to a 5 x 12 in. riser into a 10 x 14 in. wall register. The accompanying table gives the pipe and register sizes in detail.

The Plate Warmer.

An innovation is an 8-in. pipe to a plate warmer in the pantry, with a lattice opening in the upper part of the door to allow the warm air to pass out and into the pantry.

The registers for the above rooms are made from special designs in bronze to harmonize with the interior design, which, although simple, is very rich when surrounded by woodwork of a high finish. The registers for the second and upper floors, although finished in black japan, are all from special designs.

HARDWARE LETTER BOX

Any question on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

DOOR NAME PLATES—D. Sinclair, Paris, asks what Toronto firms make a specialty of name plates for doors.

J. E. Richardson, 18 Victoria St., and Patterson & Heward, 319 King St. West, Toronto.—Editor.

ALUMINUM FIGURES—C. P. Moore, Sydney, N.S., require stamped aluminum figures for street numbering, and want to know where they can be obtained in Canada.

J. E. Richardson, 18 Victoria St., Toronto.—Editor.

D. Mistele, Rodney, asks what firms in Toronto handle wood fibre plaster.

Ontario Lime Association, Toronto. It ought, however, to be cheaper to buy from builders' supply concerns in London or St. Thomas.—Editor.

PLANING FOR CHRISTMAS

Very soon the retail merchants will be up to their head and ears in the Christmas holiday trade.

While the financial condition of the country is a factor in determining the retailer's success, it is after all largely determined by the efforts the the retail merchant puts forth himself.

By exercising intelligence and forethought he can precent a great deal of regrettable "hindthought" after the holiday trade is over and a small business crop has been reaped.

Everything from a needle to a "Dreadnought" is the result of forethought, having had an existence in the mind of someone before it was created.

The same thing is equally true of business affairs. The man who does not plan and work things out in his mind, cannot create a successful business any more than it is possible for dead matter to create life.

The time is most opportune for the retailer to give some thought to the holiday trade, in other words, to map out a plan of campaign. Windows must be dressed, the public advised, and a score or more of other things to be provided for. All this requires forethought.

As a preliminary a conference might be held with the clerks, the drivers and others, whose advice might be valuable. They should be notified a day or two before hand so that all concerned may come prepared with ideas.

Staff conferences create enthusiasm, as well as business-getting ideas.

PAINT MAY ADVANCE.

The recent high prices of linseed oil and turpentine has given considerable strength to the paint market in Canada and there has been considerable talk of higher prices in both white lead and mixed paints. The strengthening tone of the lead market seems likely to bring the white lead makers together before long and the result will likely be firmer prices for the spring trade.

The largest United States paint manufacturers at a meeting held at Chicago on November 17, after fully reviewing the situation, were unanimous in the opinion that the high price of linseed oil and the stronger position of lead and other paint constituents made necessary an advence in price. Some, in fact, favored an increase of fifteen cents per gallon, but the decision reached was that at present the change would only be ten cents per gallon, with another increase later if necessary.

Linseed oil is strong in all parts of the world and no weakening is looked for before another crop is harvested. With lead advancing there seems, therefore, to be every likelihood of Canadian paint manufacturers following the advance made across the line.

BAD LEGISLATION.

Business men are just becoming aware that certain clauses are being introduced into the Insurance Bill now before the Senate, whereby every business in Canada will be seriously affected sooner or later.

The instigators of the clauses referred to are chiefly the members of the Canadian Fire Underwriters' Association. This is an organization composed of companies controlling nearly nine-tenths of the business reported to the Insurance department at Ottawa. By their vast organization, consisting of managers, directors and agents throughout the country, this association can move quickly and effectively, as will be appreciated by those familiar with the progress of the bill at the last session of parliament.

At the last session of parliament, the interests of the public were but hurriedly represented at the last moment, and but for the protest at the last moment, it is possible that the Bill might have become law. It passed the Commons, imposing a tax of 15 p.c. on the premiums paid to any insurance company which was not domiciled in Canada.

The intention of this tax was to force the owner of property to offer his business first of all to the local companies. Further restrictive clauses incorporated in the bill as passed by the Commons, placed the business man in the position of having to offer his business to the local companies first, and after refusal by them, to have to write to the superintendent of insurance for permission to try elsewhere.

The Insurance Bill was originally drawn up to protect the public against insurance companies, and those who have already experienced the effect of the virtual combine in the insurance business, will look askance at any legislation which will build up and strengthen so strong an organization. Many associations, including the Canadian Manufacturers' Association, and meetings of commercial and financial interests, have already passed strong resolutions, and have taken active measures to resist the Bill. The Montreal Produce Merchants' Association have passed a strong resolution against the proposed changes and are urging the dairy interests to take a similar stand.

Retail merchants throughout Canada should look after their own interests in this matter and drop a card of protest to their representative in the House of Commons.

CANADIAN CHROME IRON ORES.

The annual report of the Department of Mines, Ottawa, for the calendar years 1907 and 1908, gives some interesting statistics regarding the output of chromite in Canada. Chrome iron ore is used chiefly for the manufacture of ferro chrome alloys and salts for pigments, as well as far linings in steel and copper furnaces.

Ferro-chrome is produced at Buckingham, Que, by the Electric Reduction Co., and shipments of the ores have been made to the Sydney and Soo steel plants, but their chief markets is in the United States. The ore ranges in value from $17 to $20 a ton for 50 per cent. ore. Chromite is mined in the Eastern Townships of Quebec. In 1907, 7,196 tons were mined, valued at $72,000. In 1908 a little more was mined.

The world's production of chromite in 1907 was about 90,000 metric tons.

SPLENDID PROSPECTS FOR IRON AND STEEL TRADE

Despite the lull in business that most industries experience around this time of the year, there appears to be no falling off in iron an dsteel trading either in Canada or in the States. New buying, it is true, has slackened its pace, but the rate of specifying on old contracts continues unchecked, and very few furnaces or mills are out looking for business, while the majority are comfortably booked up many months ahead—some in the States even so far as June and July. For instance, so great has been the strain on the steel plants both of the Dominion Iron and Steel and Nova Scotia Steel companies that for some months they have been out of the open market so far as pig iron is concerned, all their iron going into their own mills. When reports of expansion at this foundry and at that, of fresh furnaces in blast, of new mills being erected, are heard on all sides, as they are now, then little further confirmation is needed as to the progress going on.

Although it is generally known that the month of October was a record one in pig iron production, we doubt whether many are aware what this production really amounted to. It is estimated that the output in the United States during this month was at the rate of 31,000,000 tons annually, whereas the highest yearly production up to then had been 25,781,361 tons in 1907. Whether this rate is maintained or not depends largely upon the general swing of business, and the maintenance of prices at a fair working basis. One thing is certain, there need be no fear of a pig iron famine, for the States have the capacity to produce a much larger quantity. All this production demonstrates how effectively price-cutting and the output restriction started the iron and steel industry on the road to recovery. If the copper interests had only done the same thing there would be a very different complexion on that market at the present day.

Premiums for Prompt Delivery.

For months now, iron and steel producers have been overloaded with business. In bars, plates and shapes, sheets and tin plate, pipe and wire the same story is told—the output is mortgaged for weeks ahead. In fact, so congested has become delivery that in some cases consumers are paying premiums for immediate delivery of material. One case is reported of a structural concern having to pay $5 a ton above the current market quotations to have its material on hand before the close of the year.

A very significant sign, too, is that railroad car and locomotive builders have been notified by the steel producers that the latter would no longer sign contracts for future delivery at present prices, and that a new schedule of prices would shortly be put into effect. It is figured that existing contracts will carry most of the car and engine builders over the year, so that it will be possible to finish outstanding orders on the present basis.

It is evident, therefore, that prices will continue to have an advancing tendency until the reaction that always follows a development of this abnormal kind occurs. That may be in the far or near future, or may even be developing now. But until it does come there will be no loosening of the situation. Great strength is given to the market by the fact that stocks are so light even with the heavy specification going on. Of course, there is a large tonnage of material in transit between the steel mills and the consumer, but that is not stock in a speculative sense. No merchant can be considered overloaded or if he is, he has been very lucky, considering how hard it has been to get delivery. In this respect, therefore, the iron and steel industry is in a very strong position.

Furnaces out of Market.

It cannot be said that the situation is much different in Canada. Furnaces, especially as the Dominion Iron and Steel, and the Nova Scotia, have been out of the open market, have more orders on their books than they can comfortably deal with, while the steel plants generally, if not admitting such heavy contracts as reported across the border, are booked well ahead. There has been no diminution in railroad buying, and both shops of the C. P. R. and Grand Trunk are well filled, while good orders have been placed outside.

A general inquiry of structural steel concerns shows that trading conditions are exceedingly good, some companies having so much work on hand that they refuse to tender on new contracts. In Toronto this is specially noticeable. Never before in the history of that city have there been so many huge steel structures erected at one time, as in the case at present. Ottawa and Winnipeg report the erection of warehouses for the storing of structural steel for new building by the Dominion Bridge Co., and the Manitoba Iron Works. And at the pace being set by Vancouver and Victoria the building world at the coast must be a busy one. In the east St. John is striking out in the erection of a great number of residences, business blocks and large industrial plants. Montreal, too, is keeping up its record. So the story goes on in every section of the Dominion.

Expansion in Canada.

In Canada, too, a proportionate expansion of the iron and steel industries is under way. The Lake Superior Corporation intend to spend $5,000,000 on the Soo plant; the Hamilton Steel Works, $1,000,000; the National Iron Works, Toronto, are rushing construction on their new steel plant; the Dominion Iron & Steel Co. will spend $2,500,000; the Western Steel Corporation is to put a $3,000,000 plant in B. C.; the Nova Scotia and Ontario Iron & Steel companies intend adding greatly to their plants, and the new Electro-Steel, if reliance can be placed on reports, is to spend some millions this winter on a new plant at Welland. Many large industries using the product of these concerns are springing up all over the country, and existing works are enlarging their plants.

Future Outlook Bright.

All this means there must be some reason for this expansion, and the reason is that the demand for iron and steel in Canada, just now, is at the high water mark. As showing the activity among Canadian iron workers, it is but necessary to recall the shipment of rails to Australia from Sydney, C.B., an order that was booked in competition; and just about a month ago a large consignment of steel rails from Canada was laid down at Grimsby, England, with hardly a newspaper comment on the event.

The iron and steel trade in Canada is humming now, and the prospects for 1910 are even brighter.

CANADIAN METAL MARKETS

See Itemized Market Quotations on Page 74.

MARKETS IN BRIEF.

Montreal.

Tin.—Advanced ½c to 1c.
Copper.—¼ to ½c advance.
Lead.—Up 10c on 100 lbs.
Spelter.—Now $6.
Antimony.—¼c advance.
Green Wire Cloth.—Cut of 5c.
Agricultural Wrenches. — Now 67½.

Toronto.

Turpentine.—3c decline.
Brass Rods.—Declined 2c a pound.
Old Copper.—Up ½c a pound.

MONTREAL.

November 26.—As we anticipated last week, tin and copper have advanced, owing to the continuance of the strong movements in the primary markets, and local jobbing prices of the former metal are now at 33c to 33½c, and of the latter 14¼c to 14½c, with the likelihood of further advances. Considering the prices obtaining in London and St. Louis, spelter has been somewhat on the low side, but prices this week have been marked up 25c, while lead, in sympathy with the stronger feeling all the way round and a better tone in London, has advanced 10c. Antimony, likewise, is firmer, and has been raised ¼c. All the metals, therefore, are showing a stronger tone, and with trade active, a very bright feeling is observable all the way round.

The advances in price have naturally brought in a lot of inquiries, and much more interest is being taken in the markets. There is a fear now, especially in copper, that buyers will be squeezed, and some large orders have come in from those who wish to stock up in anticipation of much higher prices. With the close of navigation general trade will fall off, but, as we said, if the strength of the market continues there will be plenty of speculative buying.

Negotiations as to the big copper merger, which are responsible for the advance in copper, seem to be going forward successfully, and there is a stronger belief now that the project will go through. Consumers are keen buyers in New York, and, naturally, in view of this anxiety to stock, producers are declining to book orders beyond January and February. Somewhat of a change from a month or so ago. The advance in the price of tin plates in the United States, and the good buying on American account, caused the tin market in London to respond, and plenty of speculative buying occurred. It does not take much to cause the London tin market to rise or fall. The spelter situation is unchanged, with the metal under strong control, both London and St. Louis. There has been more antimony buying on the primary markets, induced probably by the better feeling in the other metals.

PIG IRON—With the close of navigation the import pig iron market has quieted down, the larger users having received their consignments, and are well stocked for the time being. There is a belief, however, that users have by no means booked liberally enough ahead, and that there will be a heavy demand on store iron eventually. Canadian furnaces are busy on old orders at figures that have prevailed for some weeks. New business in the States has naturally fallen off, but specifications on old contracts continue to pour in. The mills are committed months ahead, and naturally they are very careful in taking new orders. While steel prices keep firm, the pig iron market is less rigid, and some cases of cutting are reported, which is always a feature of the markets at this time of the year.

TIN—As we anticipated, the jobbing price of tin has advanced ½c to 1c, and we now quote 33c to 33½c. Buying has been good, and the slackening off always occurring at the close of navigation has been offset by the more speculative buying induced by the advance in prices. Inquiries are good, and plenty of business seems maturing. The better feeling in copper, and the large buying on American account, owing to the advance in tin plates, made the London market bullish.

COPPER — With the increasing firmness in New York, local jobbing prices have advanced ¼c to ½c, and we now quote 14¼c to 14½c. Buying has been very good, induced by the growing strength of the market. Users who have been purchasing from hand to mouth are feeling a little scared, and are watching the market very carefully, for fear it may run away with them. The billion-dollar merger proposition in the States seems to be going on successfully, judging from the way the market is advancing. Consumers in New York are buying heavily, and producers are not contracting beyond January and February. Still all the same the great stocks that are held must not be overlooked. When the price is right there will be plenty of unloading.

SPELTER—Despite the high prices obtaining for some months in spelter in the primary markets, local quotations have been unaltered, but the maintenance of the strong figures in London and New York has at last caused a change and a 25c advance is noticed, bringing up the figure to $6. Sheet zinc is unchanged, but sheet zinc does not follow the spelter market closely.

LEAD—With the better feeling noticeable in the other markets, and an improvement in English conditions, imported lead has been advanced 10c, and we now quote $3.70, with Trail at $3.60. Buying is fair, but it will probably slacken off a little with the close of navigation.

SCRAP—There is now more scrap on the market, but cast scrap is still scarce. We continue to quote: Heavy copper and wire, 11c; light copper bottoms, 10c; heavy red brass, 10c; heavy yellow brass, 8c; light brass, 6¼c; tea lead, 2¼c; heavy lead, 2¾c; scrap zinc, 3c; No. 1 wrought iron, 12c; machinery cast, malleable, $9; miscellaneous steel, $7.

TORONTO.

November 26.—Copper is again the principal topic of conversation this week. Like the very many advances the red metal had taken in the past, the recent move proved to be a purely speculative one. The talk of "copper merger" in the U.S. gave the occasion for stock manipulators to work for easy money, and now the judicial decision rendered in the Standard Oil case has frightened the stock jobbers, with the consequence that the advanced copper quotations of last week have taken a tumble, this tumble amounting to over £2 a ton in London. It has made the local market easy, too, though the situation is not serious here.

Iron and steel lines have resumed the even tenor of their way, now that the Steel-Coal merger has moved on to make room for the next act. Business is splendid in nearly all manufactured lines, and the returns for the year 1909 will prove surprising, even to the most sanguine prophets of the earlier part of the season.

PIG IRON — Continued activity prevails, present buying being principally for the first half of 1910. The market shows great strength at the ruling prices. Canadian foundry pig iron, No. 2, is $22; and imported lines are $21 for Clarence and Middlesboro, No. 3; $21.75 for Cleve-

land, No. 1; and $23 for No. 2 Summerlee. All prices f.o.b. Toronto.

COPPER—Speculative copper declined rapidly this week, but producers' figures are unchanged. The big copper merger across the line is still talked of, but not so interestingly as a week ago. Many users of copper, and dealers, too, for that matter, think the red meatl at 14c should prove remunerative to all concerned, seeing that much of it can be produced and placed on the market for less than 9c. All are agreed that a steady market at a fair price is the best thing for this metal. Local quotations are 14c and 14½c for casting and lake ingots. Copper rods show a decline of 2c a pound.

SPELTER—Firm and active is spelter. Foreign spelter remains at $6 per hundred-pound lots, with sheets ranging from $6.75 to $7. U. S. spelter runs from $8 to $8.50.

SHEETS AND PLATES—Deliveries of both sheets and plates are becoming increasingly difficult to obtain, and stocks are really low. Prices are firmer, though unchanged, and speculation is indulged in as to the quotations for 1910. Demand is as heavy as ever, and the prospect is for higher prices.

LEAD—Fairly large supplies are being carried. City business is none too heavy, and the country trade is but slightly better. Small quantities of imported lead are at $3.65, with Trail 10c below this figure. The situation is wholly unchanged from a week ago.

TIN—The market for tin is hardly as strong as last week. Tin is weaker in outside points, but active locally. The quotation of 32½c is unchanged from a week ago. A better price might be obtained for quantities.

OLD MATERIALS—Old copper and brass show strength and dealers are offering slightly higher prices for some lines. Old iron and steel, too, are firmer. Dealers are offering this week for heavy copper wire, 12c; for copper bottoms, 11c; heavy red brass, 10½c; heavy yellow brass, 8½c; light brass, 6½c; tea lead, 2½c; heavy lead, 3c; scrap zinc, 3¾c; No. 1 wrought iron, $11; machinery cast scrap, No. 1, $15 to $16; stove plate, $13; malleable and steel, $8; old rubber, 9c.

Granby's seven copper furnaces at Phoenix, B.C., smelted 26,702 tons during the first week in November, showing an increase of nearly a thousand tons over that of the previous week. The tonnage treated represents approximately 550 tons of ore treated by each furnace every 24 hours during the seven days.

HARDWARE MARKETS

MONTREAL.

November 26. — Two important changes are announced in the markets this week. Green wire cloth, owing principally to American competition, is marked down 5c, and is now quoted at $1.65. Agricultural wrenches are now quoted at 67½ off instead of 70. This is due to the higher prices obtaining in the States. Apart from these changes the markets are very little different from last week. Booking has occurred in green wire cloth and screen doors, but most of the business is being done in generally asorted orders, of a holiday character. Cutlery, and silver ware are moving well, also good repeat orders are coming in for skates, hockey sticks, snowshoes, toboggans, sleds, and lines of brass goods suitable for presents.

Business generally, is much better than last year, and is, in fact, distinctly above the average, and jobbers are very satisfied.

Prices for belting and rubber hose will probably be higher next spring, and copper goods are also showing firmer strength. Bolts and nuts continue extremely firm, while there are signs of a shortage in nails. This we anticipated some time back.

There is a heavier holiday-goods movement than has been noticed in former years, and it certainly seems as if merchants intended making a strong onslaught on the trade to be obtained around Christmas.

BUILDERS' HARDWARE—The open weather that has been experienced up to the last few days, enabled considerable progress to be made with building, with the result that the most commonly used lines are in good demand. It is probable that building will be pushed on right through the winter. No changes are announced, and we quote: Lock sets (inside), $4 per doz. and up; lock sets (outside), $13.20 and up; common rim locks, $1.10 per doz.; porcelain knobs, $1.10 per doz.; sash cords, 32½c to 33c.

WINTER LINES—Booking has taken place in green wire cloth, now at $1.65, and in screen doors, but otherwise dealers are not looking much ahead. They would be well advised, however, to watch the markets. Rubber hose, belting and copper lines are evidently billed for an advance. Sleigh heaters are in good demand, and so are sleigh bells, horse blankets, weather strip and burners, all in a sorting way. Enamelware is moving well, and tinware has received a flurry lately, evidently in anticipation of a good holiday demand. House cleaning goods are also in strong demand, at unchanged prices.

CUTLERY AND SILVERWARE.—Christmas lines form the predominent part of the goods now moving. Carvers in cases, table cutlery, berry spoons, pickle frames, and cut glass, are all in strong request. Purely holiday trade is more noticeable this year than in former ones. Razors, shaving sets, manicure sets, scissors in cases, are also prominent sellers.

SPORTING GOODS. — Skates, hockey sticks, snowshoes, and toboggans are the principal movers in this department. Not for many years have jobbers experienced such a call in skates. Guns and ammunition are moving quietly. Air guns and gymnastic lines are in good demand.

MINERS' SUPPLIES.—The demand is very quiet, and without character. No changes are announced, and we quote: Miners' picks, 16½c a pound; prospectors' hammers, 16½c; pick handles, $1.85 a dozen; drilling hammers, 6c a pound; crowbars, 3½c; drill steel, 8.

BOLTS AND NUTS.—Very firm conditions are obtaining. The demand is good, especially for this time of the year. We continue to quote: Discounts on carriage bolts ⅜ and smaller, 70; machine bolts, ⅜ and less, 60, 10 and 10; coach screws, 75; stove bolts, 80 and 7½.

NAILS.—Evidences of a coming shortage appear more marked, and dealers should keep watch on the situation. The market is steady, and we quote: Wire nails, $2.25; cut nails, $2.40.

LUMBERMEN'S SUPPLIES. — The demand is very brisk, and some large orders have been received. The Maritime Provinces are buying very well. We continue to quote: Cant hooks, $12 a dozen and up; axes, $6.50 a dozen and up; axe handles, $1.15 and up; cross-cut saws (inferior) 25c per foot and up; better grades, 43c per foot and up; axe wedges, 25c a dozen and up.

SHOVELS. — Snow shovels are now moving very brisk, the weather

being all in favor. We continue to quote: First and second grade of spades, 60 and 2½; 3rd and 4th, 50 and 2½; scoops, 1st and 2nd grades, 50 and 5; 3rd and 4th, 45 and 5.

WIRE.—Wire generally is very dull, and there is little life to the market, except in fencing and plain wire. We quote: Barb wire, car lots, mixed, $2.50; small lots, $2.55; plain twist, car lots, $2.80; small, $2.85. Galvanized wire, No. 9, $2.25 in straight and mixed car lots, and $2.30 small lots, f.o.b., Montreal. Coiled spring fencing, $2.30; straight and mixed car lots, and $2.35 small lots. Plain wire, bright, annealed and annealed and oiled, $2.35 base. Staples, bright, $2.60; galvanized, $2.85.

TORONTO.

November 26.—Christmas orders are beginning to move in better volume, though hardly as yet up to expectations. Cutlery and silverware are the principal goods of this class going forward, and quite a lot of sleighs and winter outing goods have gone forward this week. Judging from the talk of the trade, December should see one of the biggest Christmas selling months in the history of the hardware business in this country.

Prices generally are held firm, with a tendency to higher prices on manufactured iron and steel lines, as well as tools. Wire cloth is a little easier, though unchanged in price. The heavy booking of this line is about done, which to some extent has caused the easier tendency. Rubber hose, too, is hardly so firm as last week, due to the arrival of new crop rubber from Para. While prices did not actually advance, there was a likelihood of their doing so, but this arrival of new rubber will cause the market to again be steady.

BUILDERS' HARDWARE — The few wintry days of this week have added to the scramble for various kinds of builders' hardware. New orders continue fair, though hardly of the volume of those a month ago. Lock sets in fancy patterns are the wantable lines. Those showing some relief from the severely plain have the preference. Builders' tools, especially carpenters' tools and wrenches, are still called for in fair quantities.

SEASONABLE LINES — Some agricultural goods are the best selling lines of the week. Shovels and forks and repairing kits with barrows and poultry netting seem to be favorites. Early winter goods are going some better, and a number of snow shovels went to outside points, no doubt as a result of the first snowstorm. Horse blankets and sleigh bells are having some call. A large number of general sorting orders were placed this week, the call being for shelf goods.

HEATING AND LIGHTING GOODS—The chilly weather has put more briskness into the business and demands for furnaces are again the order of the day. Stoves, too, are steady sellers. Barn and stable lanterns are probably the freest sellers among lamp goods. The lamps selling now are principally fancy ones for the holiday season.

HOUSEHOLD GOODS — An upward turn has come for housecleaning goods. Brass rods for curtain and other home decorative purposes have gone out in fair proportions, and brooms in large number. Washing machines, wringers, mops and articles of like nature are more active now than at any time since September.

SPORTING GOODS — Sleighs, hockey sticks, tobogans and skates are the lines now going. A fair quantity of indoor games, too, have gone to the larger towns, and some inquiry has been made for exercisers and gymnastic goods.

CHRISTMAS GOODS—It must be confessed that there is no rush as yet for holiday goods. Cutlery is perhaps the best line classed with these goods, and sets of fine steel have sold well. Silverware, and platedware, also, have been in fair demand for the past two weeks.

DUMPING OF TIN PLATE.

Ottawa, November 24. — British tin plate manufacturers are being hit hard by the American dumping of tin plate into Canada now that Canada has suspended the anti-dumping clause. It is said that last week Pittsburg plate makers secured the biggest order for many years, 80,000 boxes of a value of about $320,000 from the Simcoe Canneries Company, at a price of 10 cents a box below the British price.

It is alleged that dumping is proved by the fact that the price at Pittsburg was more than 50 cents above the British price delivered at Simcoe.

SOME JOBBING CHANGES.

J. A. Fraser, recently salesman in Western Ontario for Frothingham & Workman, Montreal, is now traveling for the Alexander Hardware Co., Hamilton, who recently entered the wholesale field.

The Purdom Hardware Co., London, have established wholesale premises in a new building erected by C. S. Hyman, on Richmond Street, adjoining the C.P.R. tracks.

T. McAvity & Sons, St. John, N. B., will, it is understood, establish a branch brass goods and soil pipe foundry at Port Arthur.

ASSESSMENT AMENDMENTS.

Reference was recently made to the change from the personal property manner of assessment in Ontario to the business assessment method. At the same time it was pointed out that a special committee was appointed by the Ontario legislature to consider objections to the Assessment Act, and report back to the legislature.

This special committee met on Tuesday of this week, and heard numerous proposals for changes, but no objections were forthcoming from retail grocers, and with the exception of coal men, few were aired by retail merchants.

All grocers, hardware merchants, plumbers, and dry goods merchants under the business assessment are assessed at 25 per cent. of the value of the premises occupied where the population of the municipality is over 50,000; 30 per cent. where it is over 10,000, and 35 per cent. if under 10,000. The business tax of wholesalers is 75 per cent., and manufacturers 60 per cent. Coal merchants are rated at 50 per cent. except in cities of over 100,000 population, where it is 30 per cent.

So far as the retail merchants are concerned, generally, the act is working better than its predecessor and the merchants oppose the proposal to return to the system of taxing on stock. Some amendments will likely be made at the next session of the legislature in cases where objections are reasonable enough to demand them.

J. McDougall (Caledonian Iron Works) Company, Montreal, are suing the City of Montreal for $10,000 bonus in connection with the passing of the turbine pump erected by the company.

Business Methods of Canadian Hardwaremen

Guelph Merchants May Establish Joint Delivery System—St. John Merchants Find Phonographs Profitable Side-line—Encouraging Early Buying of Christmas Goods—Billboard or Newspaper Advertising —Brantford Merchants Make a Point of Not Substituting Goods for Others Not in Stock.

CO-OPERATIVE DELIVERY SYSTEM.

Guelph, Nov. 24.—A plea for a united delivery system among the merchants of Guelph was one of the features at the annual banquet of the Retail Merchants' Association held here on Nov. 10th. It was made by Ald. J. A. McCrea, grocer, and has since been favorably commented upon. He believed that a great deal could be saved to merchants and customers alike, if the merchants would band together for a united delivery system, as they had done in the case of their official collector system. He believed that if the merchants had all their delivery work done together they could cut off a great deal of expenditure in this respect that was really quite unnecessary. For instance, there could be a collection made early in the morning from all the stores, and the parcels hurried down to a distributing place, where they could be sorted out and sent out on the various routes. Four deliveries a day might in this way be sent out to all parts of the city, and so there would be no overlapping of two or three delivery wagons going to the outskirts of the city with little parcels that could all go at once. The idea met with the hearty approval of all, and Mr. McCrea was warmly applauded.

Value of Collection System.

The work of the Guelph Association, now famous for its originality and success in establishing a general collection system, was dealt with in a paper by H. Occomore, stove dealer. He reviewed the work since its organization, and in an interesting manner made some reference to the benefits that had been derived by the merchants, who had been wide awake enough to become members. The collector scheme was one of the phases of the work that he touched upon. He told how the bad accounts had been hustled in by the official collector in a manner that had gladdened the hearts of every member of the association, and had convinced them all of the truth of the old proverb, that in unity is strength. He claimed that the members had not yet more than begun to realize the benefits of organization and system as an association, and predicted that in a few years things which now seemed to them to be vague possibilities would be realized as great benefits just as the collector scheme had been. The collector scheme, he pointed out, though only organized in Guelph a couple of years ago, had been successfully adopted by a number of other cities and towns all over the province.

PHONOGRAPHS AS SIDE LINE.

St. John, Nov. 24.—The McLean, Holt Co. is showing a very attractive window display this week. A large range nicely fitted up, occupies the centre, and is flanked on either side with a heater. The range is fitted with stove pipe, base, etc., and a nickeled tea kettle, and several sauce pans are placed on top, just as they would appear in a kitchen. Everything needful in the way of stove fittings and accessories is shown on the floor in the foreground, and the display should result in an increased sale of various lines.

W. H. Thorne & Co., are showing in one of their windows a line of phonographs, for which they have the exclusive agency in St. John. It has proved a very profitable side line, and is handled in connection with the sporting and athletic goods department. W.E.H.

BRING OUT CHRISTMAS BUSINESS.

Chatham, Nov. 23.—"There has been a marked improvement during the last few years with regard to one phase at least, of the Christmas trade," remarked a hardwareman this afternoon. "That is, early buying. People are getting into the way of purchasing their Christmas stuff earlier in the season than what they used to; and I can tell you, it is somewhat of a relief to us to have the buying spread over a longer space of time, instead of being crowded practically into the last week or ten days. A great deal of credit is due the newspapers, which have helped to boom "early buying," and thereby have benefited a host of willing, but weary workers.

"I really think," the speaker added, frankly, "that the merchants could do a great deal more than they have been doing to educate the public in this matter by buying early. For it is all a matter of education—and it is certainly worth while, from the merchant's point of view, to start the season a week earlier, if there is any way to accomplish it. For one thing, he needs less expensive, because unskilled, help upon his selling staff; and very often the man who buys early thinks of something else and later comes back and buys more. Then, in the rush of the Christmas season, I have seen dozens of customers go into stores, and wait awhile and go out again without purchasing. There's no way for the merchant to help it, sometimes. And other purchasers have been so rushed that they haven't had the time to make a decent selection, and as a result don't buy all that they should.

"Quite a bit of good has been done by the practice of advertising that orders would be taken for goods to be delivered later. The jewelers and stationers do more of that kind of thing than the hardwaremen, but the hardwaremen could handle their Christmas stuff in just the same fashion. 'We will hold any article for you,' is a very good display card to have in one's window at the start of the Christmas season.

"But the merchant can do a great deal more than that. His most effective means of encouraging early Christmas buying is to start his Christmas selling campaign earlier. From long experience of advertising I have discovered that, where seasonable stuff is concerned, a merchant has very often to run several consecutive insertions of the advertisement before the big demand starts. It takes more than one newspaper talk to bring the buying crowd in your direction. Quite a few merchants use double space for say ten days before Christmas; when, if they started 'talking Christmas' in their single space a couple of weeks before that they would produce far better results.

"That's the first point—start your

Christmas advertising earlier. The second is to start your Christmas window display when you start your Christmas advertising. Now, lots of merchants reserve all their ingenuity for a masterpiece of Christmas window display, which is usually unfolded for the first time the Saturday night before Christmas. That's all right enough, but they should start 'talking Christmas' through the medium of less elaborate displays a good spell before that. Use lots of show cards touching on Christmas topics and suggesting Christmas purchases. That will help bring out the trade.

"Then, another point, try circularizing your regular patrons a good while ahead. A nice, imitation typewritten letter on the subject of Christmas buying will set them thinking. Tell them the advantages of buying early. Better chance to make a selection, larger stock of goods to pick from than when the store has been cleaned out by the Christmas rush, more time in which to make the selection, fewer waits, less wasted time hanging about the store. If you put yourself in your customer's place, you'll have little enough difficulty in bringing forward a lot of strong arguments. And, to cap the climax, offer to hold any purchase for subsequent delivery, if desired. If you don't go about the circular letter business like a bull, you'll bring good results in the way of stimulating early buying, and give a far better service to your regular customers.

"I've often heard it said that people will put off their buying till the very last, and that there's no help for it. I used to think that myself. Nevertheless, I've been trying to bring them out earlier and though the results aren't everything I could desire, nevertheless, they show that the public can be induced to buy earlier in the season if you only go the right way about it.

"When a single merchant tackles the proposition, it's slow work, though, as I've said, I have certainly brought the results. But if all the merchants in a town or city, or even all the merchants in a single line of trade, would get together and boom early buying, we would certainly see big results."

W.E.P.

REFUSES TO SUBSTITUTE.

Brantford, Nov. 21.—"We do not substitute." This is a motto displayed prominently in Watt & Squire's store, and which is drummed into the ears of their staff as soon as the salesman goes down on the pay list. "We advertise heavily, and we cannot afford to have a customer come into the store and have a substitute offered for an article which he has been enquiring for, as it turns away a steady customer or a prospective steady customer when he cannot get the article he wants," said Mr. Squire. "We impress strongly upon our customers' minds that if any hardware article they may want is not in stock, we will get it for them, and with the least possible delay. This course is especially pursued in the sale of goods with a nationally-advertised reputation, but with some articles, of course, a different policy may be followed. For instance, where a hockey stick is wanted, by showing the superiority of our sticks over other sticks, sales result, and with a satisfied customer to begin with it is no difficult matter to hold his trade."

A. W.

BILLBOARDS OR NEWSPAPERS.

Ottawa, Nov. 24.—What would you think about a man who when solicited for advertising would tell you that he did not require it? That some years ago he used the papers but could not see any results, and that his trade was confined to his own locality, and then a while afterwards you noticed bills posted all over the city calling attention to the class of goods sold by this self same man? If the papers were not a profitable means of publicity, for his business, surely his expectations from billboards cannot reach unscaled heights.

If billboard, and programme appropriations were apportioned to the daily newspaper for spaces to be filled with matter judiciously compiled, the coffers of the hardware merchant would be enriched to greater extent than by means of these secondary channels.

Of course, it will not do to contract for a five-inch space and write one ad., then let it run for time indefinite. Just as well have no advertisement as follow this course. If you have not the time to write your advertising matter, and none of your clerks possess the requisite talent, engage the services of one who makes it his whole or part profession to prepare advertising matter. The results will justify the expenditure.

Think it over, Mr. Merchant! The holiday season is approaching and shoppers will be scanning the announcements of your competitors, instead of heeding your reserved method of trade. Get after the business, with plainly, but emphatically-worded and appropriately illustrated announcements! You'll receive the patronage. But keep at it.

G. M. H.

GET AFTER HOCKEY TRADE.

Brantford, Nov. 23.—There promises to be a big revival in hockey, both professional and amateur, in Ontario this year, and it behooves hardware dealers to "be up and doing." In this city there will be a professional team, and in all probability a junior O.H.A. team. Besides, these, there will probably be a city league, senior, and a city league, junior. A sporting goods clerk who followed hockey at all could do some good work just here by getting in touch with the secretaries of the various clubs and getting a contract for all the club's sweaters, boots, hockey sticks, guards, pads, and so-forth. Up to the present no organized effort has been made by local hardware dealers to cater to the sporting community, except in the way of rifles, the rest being limited to the stationery stores. An active, wide-awake clerk would change all this.

A. W.

MERCHANT BEGINS IN TENT.

Montreal, Nov. 24.—Isaac Taylor, of Taylor & Drury, general merchants, White Horse, Yukon Territory, visited Montreal recently on business preparatory to spending a winter's holiday at his old home in Yorkshire, England. Mr. Taylor has been in business in White Horse for over ten years, and from a beginning in a small tent, has built up a trade that utilises a large store in White Horse, and several branches in the surrounding territory. He states that the mail order question, particularly in dry goods, is a serious problem for them. They endeavor to counteract this influence by keeping good stocks, and using aggressive methods of display and advertising.

The cash basis is not absolutely adhered to, as thirty-day credit is often given. Clerks receive salaries of from $150 to $175 a month, but living is very expensive, and amusements limited.

Their store is departmentized and purchases and sales of different lines kept separately. White Horse has only a population of about 250, but the transient trade and outfitting of camps make possible a large turnover.

Trade Gossip from Canada's Eastern Provinces

Possibility That Large British Cement Manufacturing Co. May Invade Canadian Field and Compete With Cement Merger—Maritime Hardware Traveler Married.

HALIFAX.

November 22.—The Halifax hardware jobbers report business in fairly good volume for the season of the year. Collections on the whole are very satisfactory. While no very large orders have come to hand recently, there is a pretty good jobbing trade passing. High prices continue in all lines. Some of the dealers are taking time by the forelock, and are purchasing certain lines of hardware ahead as they feel pretty certain that there will be no reduction in prices for some time to come. All metals are very firm at present, and the prices high. Wire nails, for delivery after the first of the year, are now quoted at $2.50 per keg. Cotton seine twine is selling at 28 cents per pound, with the usual extras for small sizes. Barb wire has advanced, and is now quoted at $2.75 to $2.85 per 100 pounds, with the market very firm. Several of the rolling mills have advanced the price from ten to fifteen cents per hundred pounds, on all kinds of steel manufactures, such as sleigh shoe, tire, toe-calk and spring. Pig lead is higher and further advances are looked for at any day. Bar iron is also up five cents per 100 pounds, and the indications are that it will go still higher during the next few weeks.

The marriage took place at Arichat to-day, of George Somers, traveler for the wholesale hardware firm of George E. Smith & Co., Halifax, and Miss Mary Martha Boudrot. The ceremony was performed at Arichat by the Rev. Father Monbourquette, in the presence of a large number of friends of the contracting couple. They were the recipients of a large number of valuable presents. After a tour of the province, they will make their home in Halifax. J.H.

—

MONTREAL.

November 24.—Cement is on everyone's lips just now, and it is interesting therefore to hear the views first-hand of a prominent English cement manufacturer, who is at present sojourning in Canada. Harold H. D. Anderson, managing director, Associated Portland Cement Manufacturers, London, Eng., gave some interesting statments on cement, and its possibilities the other day, after being asked his views of the cement merger and the future prospects of the cement trade in Canada.

"It is three years since I was in Canada," said Mr. Anderson, "and the demand for cement has, I find, increased considerably. Concrete is now recognized as the best building material, owing to its safeness and fire-resisting qualities. Lumber becomes dearer every year, and engineers are only too keen to recommend a cheaper substitute, with the result that railway ties, railway sleepers, as we call them in England, telegraph and telephone poles, water and sewer pipes, and also roofs, are all made of concrete. This naturally increases the consumption per capita and the industry over here is still in its infancy. In spite of the large increase in the production in the Dominion, I am interested to know that the British cements still hold the confidence of the trade."

"What do you think of the cement merger?"

"Well, it appears to me to be very heavily capitalized, especially as they cannot expect to maintain a monopoly. When I was here three years ago the company I represented had options on some of the plants which now are combined in the merger. It is only common sense to realize that we are aware of the cost of production here. I saw at that time several suitable sites for cement making, but the slump of 1907 dampened any desires for erecting fresh works. Now that competition is restricted to a few hands a fine opportunity presents itself for a new factory with a moderate capital, controlled by those who have a knowledge of the trade."

Mr. Anderson was exceedingly conservative in his remarks, but stated that he knew of splendid locations throughout the Dominion, advantageous from the point of transportation facilities, as much as the consuming of cement, upon which he and his company had their eye. He intended to visit the Maritime Provinces and Newfoundland and would later visit other portions of the Dominion before returning to England. By many it is thought that his company will invade the Canadian field, and as they control the bulk of the British cement trade, their competition will be a serious factor to contend with.

Speaking of British trade, Mr. Anderson assured Hardware and Metal that business was not so bad in Britain as most people would try to make believe it was, as far as he knew, as he judged by the increased post office receipts, as well as the exports and imports, and there was no sign of immediate decline in these figures. He has great faith in Canada, as most British investors had at the present time, and he believed there were almost unlimited possibilities, especially in cement. C. D. C.

Interesting Trade Items Gathered in Ontario

Sheet Steel Corporation to Ask for New Duties — Brantford Gets New Factory—Condition of Trade in Various Parts of the Province.

KINGSTON.

November 23.—"A Window for the Farmers," would be a proper heading for the window at Marshall's hardware this week, which was made most attractive for farmers, in that every article displayed was for their use. It contained articles required in work around the stables, and many compliments were paid the firm for the way the articles were arranged. Mr. Marshall, who has only been in charge of the store for a short time, is one who believes that some of the best advertising can be secured out of the window dressing, and he has paid special attention to this department.

E. G. B.

—

OTTAWA.

November 23.—Among the applications to Parliament at its present sitting is one by the Canada Sheet Steel Corporation, of Morrisburg, for an increase in tariff on tin plate. Last session the appeal was unsuccessful, and this session the company will ask for a duty of $3 per ton on black sheets, $4 per ton on polished sheets, and $5

per ton on galvanized sheets and galvanized Canada plates. There is also some talk that consideration may be given to anticipated changes in the iron and steel bounties, but no definite action has been planned. Changes like these will mean an almost complete revision of the tariff.

Building permits during the last couple of weeks amounted to over $120,000. This year's showing will present a marvellous lead over last year.

Everywhere one observes preparations for the holiday trade, new stocks and attractive counter, shelf, case and window displays being in evidence. With a touch of cold weather and a fall of snow business will be brighter and everybody will be happier. G. E. M. H.

BRANTFORD.

November 23.—The Brandon Shoe Co., whose factory was destroyed at Aylmer by a boiler explosion, will come to Brantford, backed by local capital. A site has been secured next to the Brantford cordage works, and a new factory will be erected as soon as possible.

Work on the new building being erected by the Union Realty Co., on Dalhousie Street, is progressing rapidly, and Watt & Squire, retail hardwaremen, hope to be occupying their new premises by February next.

Edward Crump, a tinsmith, who has been engaged for some time in the Sanderson-Harold Works new factory, Paris, was killed by being hurled around a shaft of Penman's mills on Friday.

Harry Chas. Taylor, of the plumbing and steam fitting firm of Taylor & Sons, this city, was united in marriage on Friday to Miss Blanche Piper, of this city. On their return from a honeymoon tour, they will reside in this city.

A few of the merchants of this city are already commencing their "early Christmas buying" campaign, but as yet none of the local hardware dealers have specialized in this line. While every merchant likes to see a heavy rush of buying at Christmas, it is much better, for both customers and purveyors, to buy their Christmas supplies early in the season.

The Goold, Shapley & Muir Co. will erect two new machine shops on the site of their present warehouse. They will be three storeys in height, and 190 x 50 feet.

The cutlery trade, especially the Christmas cutlery trade, is greatly cut up in this city. In previous years the hardwaremen have had competition from two sources, the jewelry and drug stores, but this year the field has been entered by other stores. A prominent grocery store and china shop on George Street is showing in its windows this week a line of carvers, carving sets and knives for various purposes, and the co-operative store is entering the field with a line of nickel-plated ware. "There is little profit on what little cutlery trade there is," said a local hardwareman to your correspondent, "for though there is no price-cutting worth talking about in our own body, the other merchants are not in the least particular." A.W.

News From the Prairie and British Columbia

Novel Hallowe'en Window Display in Vancouver Hardware Store—Railway Construction in Alberta for Year Totals 500 Miles—Improvements to be Made to Help River Navigation in Western Canada—Regina's Request for Lower Freight Rates.

VANCOUVER.

November 20.—Fourteen miles of water mains will be laid in Vancouver next year, according to the plans laid before the Water Committee.

T. F. Black, Winnipeg, is in Vancouver looking for a site for a wire factory. He may find a location on the Fraser river. Should the proposition go through, it will be financed by a company composed principally of British Columbia men.

The Canadian Bridge Company, Walkerville, was awarded the contract for the superstructure of the new Cambie street bridge, its tender being $439,210.

The Jordan-Wells Railway Supply Company proposes to establish a plant either in North Vancouver or New Westminster, with an expenditure of $50,000, the plant to employ 30 skilled men. Sites are now being looked over. A proposition has been made to the North Vancouver council.

Building shows no slackening with the winter months, in fact the first half of November is almost a record. Last week, the total value amounted to $118,830.

Attractive display windows and unique exhibits are in different classes and both attract considerable attention. Hardware men are quick to see the advantages of having goods displayed so that the prospective customer may inspect from the street, and some exceedingly tastefully arranged windows are to be found in this city. The McLachlan Hardware Company had a unique window for Hallowe'en and another along a patriotic line for the King's birthday, in fact this was the only firm in the city to go to some trouble in arranging a window display having a loyal and an imperial idea. The Hallowe'en window was somewhat elaborate. The background was painted to represent a cornfield with scarecrow and full moon. The foreground was a representation of a cornfield with shocks of stalks and real pumpkin vines bearing pumpkins. These latter were sprinkled with frosting. In the centre of the shocks were the usual weird pumpkin heads, illuminated with candles, and besides mounted upon two white shrouded figures were human skulls, illuminated with greenish lights. The entire lighting effect was in pale green. A large white head with red eyes and bust was labelled "The maid of the mist." A card had the quotation, "When the frost is on the pumpkin, and the fodder's in the shock," and another card bore the injunction, "Have a good time, but beware of the bogey man."

A satisfactory test of Balfour's bifurcated railway spike was made before the members of the Railway commission, when that body was in Vancouver. Spikes were driven into a tie, pulled out and straightened cold and re-driven several times. In pulling the spike with the new designed locking shoulders, it was necessary to have two men on the lever, and when this spike was straightened and re-driven into a knot, it took these two men some time to pull it out again. The spike and the machine with which they are made at a very rapid rate were both invented in British Columbia. R.B.B.

VICTORIA.

November 20.—Trade is keeping up very well. There is still a very considerable amount of building going on. A cold spell for a few days gave an impetus to the fall stove trade. A

Condensed or "Want" Advertisements

Those who wish to sell or buy businesses or stocks, obtain competent help, connect with satisfactory positions or secure aid in starting new enterprises should not fail to use the Want Ad. Advertisement page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. HARDWARE traveler with an A1 connection is open for an engagement January 1st, 1910. Twelve years' experience in the Ottawa Valley. Communications strictly confidential. Address Box 914, HARDWARE AND METAL, Toronto. (48)

WANTED—Position as hardware salesman; wide experience in shelf and heavy hardware. Best of references. Would start work at once. Box 910, HARDWARE AND METAL, Toronto. (47)

great deal of business property is changing hands at very good prices. Among these sales is the sale of the property at present occupied by Hayward & Dods, plumbers, who, in turn, have had to purchase a lot for their own use. The Western Motor Co. have purchased the Fort Street property and are to erect a modern garage on the site.

Tenders for 20 tons pig lead for the waterworks department were received from Coleman & Evans, Vancouver, $3.60; Colbert Plumbing & Heating Co., $3.59; H. W. Kent, at $84.25 per ton. Referred to purchasing agent.

The city council is calling for tenders for lead pipe and brass goods.

A report is current that debentures are being floated to the extent of $2,000,000 in England for extensive shipbuilding yards and a floating dock at Esquimalt. The B. C. Marine Railway Co. is said to be interested in the venture. W. B. C.

CALGARY.

November 18—The Government are preparing to begin operations on the new Langevin bridge, to replace the present one. The new structure will consist of two spans, each 200 feet in length.

John M. Scott, of the Oregon Railroad & Navigation Company and the Southern Pacific lines in Oregon, was in the city arranging for the annual California excursion of the Spokane Chamber of Commerce. Mr. Scott states that the Harriman lines will probably find it necessary to open offices in Calgary as headquarters for the province.

The C.N.R. Grading Co. have finished about 20 miles of their work on the Goose Lake line into Alberta. The point where the men are working is about 150 miles east of Calgary, and about 24 miles north.

Premier Rutherford, in speaking of the increased transportation facilities of the province, said that this year 500 miles of steel had been laid in the province and would be in full operation early next year.

The Government, recognizing the fact that more jail accommodation should be provided for Calgary and district, have already commenced the necessary steps in order to secure the required ground in the near vicinity of Calgary, and will in the near future begin the erection of a penitentiary of sufficient capacity to serve the needs of the district for some years to come. M. G.

WINNIPEG.

November 24.—The question of navigation in western Canada has been given serious consideration recently by the Federal Government. For some years requests have been coming in for improvements and initiative work along the various water courses, and as a result the Government made appropriations to cover a number of important cases. The following is reproduced from the Gazette, issued from Ottawa:

Manitoba—Lake Winnipeg wharfs, $10,000; Red River, protection of new entrance channel at its mouth, $10,000. Winnipeg Beach harbor, protection pier on Lake Winnipeg. Revote of $7,480 lapsed, $10,000.

Saskatchewan and Alberta—Athabasca river—Removal of boulders, and deepening channel through sand and gravel bars, $10,000; harbors, rivers and bridges, general repairs and improvements, $20,000. Last Mountain Lake—improvement of navigable route, $10,000; Lesser Slave river—Urgent provisional improvements, $9,000; North Saskatchewan river—Removal of boulders opposite Prince Albert, $5,000; wing dams for improvement of navigable channel from Edmonton to Lake Winnipeg, $25,000; surveys of rapids on North and South Saskatchewan rivers and other navigable streams, $10,000.

T. L. Waldon, sales manager in the Marshall-Wells wholesale house, Winnipeg, is at present touring the west, inspecting the company's branches.

Dr. J. K. McClelland, president of the Waldon Heating Company, leaves for California this week, for a pleasure trip through that state. He will return in January to continue his position as financial manager of the J. D. McArthur Construction Co.

The Waldon Heating Co. have recently secured contracts to instal heating plants in the G.T.P. round-house, the Calgary hospital, four schools in the west, and an apartment block in Lethbridge. L. C. H.

FREIGHT RATES TO REGINA.

An interesting problem in connection with the lowering of freight tariffs was placed in the hands of the Railway Commission, which met in Winnipeg last week. The Regina complainants' sole request was that the same privileges extended to Winnipeg should be given to Regina. On the surface it did not appear that the request was anything but reasonable and one to which the commission would readily accede. The problem, however, is an extremely far-reaching one, and manifestly important to the wholesale trade of western Canada.

Upon it becoming known that Regina aimed at securing Winnipeg rates, the Winnipeg Board of Trade appeared to substantiate the present system of tariff, and support the railways in maintaining the present schedule. In this connection, E. D. Martin, president of the local board, said:

"Montreal has an advantage over Winnipeg to points west, the same as Winnipeg over Regina to points west. If the concession should be granted it means that every place west of Winnipeg would have a right to ask the same rate."

W. W. Laird, who represented Regina, said:

"We only want to be placed on an equal footing with Winnipeg. It has been freely admitted that Regina is discriminated against, and to say that the larger interests of Winnipeg justify the discrimination is positively absurd, and I am sure the commission will agree with me. It has been said that Regina has no car lot trade in the west, but it is certain that if we had fair rates we would soon develop such a trade."

The feeling is that the Regina pleas were well founded in the estimation of the Commission, although judgment was reserved.

The unprejudiced mind would manifestly agree with Mr. Laird that Regina would develop a larger trade should the city be given an opportunity. L. C. H.

NEW ROD MILL AT SYDNEY.

J. H. Plummer, president of the Dominion Iron & Steel Co., has sent to Hardware and Metal the following regarding improvements at the Sydney plant:

"At the recent meeting of the directors it was decided in view of the largely increasing demand for wire rods, to erect a duplicate of the Morgan Continuous Rod Mill, at Sydney, which is now in operation in the Steel Company's plant. This additional mill will take care of the growing business in view in the early future, and leave a margin for the future increasing requirements of the country as well. The company's rod mill has been now in operation for three or four years, and each year makes a better showing. It is now turning out fire rods at a rate exceeding 9,000 tons per month, which is by far the largest output ever obtained from a plant of this kind."

CORRUGATED IRON

We make it—either painted or galvanized—in 3, 4, 6, 8, 10 foot lengths. In 27½ inch or 33 inch widths. . . . . .

Metal Siding and Shingles

Galvanized or painted, all weights.

OUTGROWN

Notwithstanding that we have just completed our new varnish factory and have been adding to our warehouse and paint factory yearly, our business has increased so rapidly that we have outgrown our present premises. We are now excavating for a building that will more than double our factory capacity and we find it necessary also to add to our varnish plant. THERE IS A REASON. *Stephens* goods are good goods. We have every facility for shipping orders in the shortest possible time. We want a talk with you, Mr. Hardwareman. Our Travellers will look you up. They will interest YOU.

Read a FREE Book, about better ceilings. Tells of two thousand designs for every sort of structure from a cathedral to a warehouse—proves why our ceilings cost less. Get the book. Ask our nearest office.

A few Reasons Why You Should Handle PEASE ECONOMY ROUND HOT WATER BOILERS

They are built especially for basements with low ceilings ---which gives them a wider demand.

They have Iron to Iron connections.

They have a large Centre Water Column.

They are set without rubber packing or washers.

They have large, powerful Direct Fire Surfaces.

They embody every modern improvement in boiler construction which is of real value either in adding to heating efficiency or reducing fuel consumption. As a result

ECONOMY BOILERS ARE EASY TO OPERATE AND ARE VERY ECONOMICAL.

If you are a practical dealer, a perusal of our Booklet will convince you. Send for a copy to-day.

Western Canada Hardware Market Situation

Our Western Correspondent Reviews the Market Outlook — Hardware Quotations Corrected by Telegraph From Hardware and Metal's Winnipeg Office up to Noon on Friday.

Winnipeg, Nov. 26.—Wholesalers report trade rather quiet compared to what it has been for several weeks. Most of the holiday goods and the big game sporting lines are out, and although merchants are selling freely, there is little occasion for orders at present. According to travelers' reports it is expected that in December repeated orders for immediate delivery will be numerous. Never before has the holiday trade been so eagerly anticipated. Many, it is believed, will have holiday stocks exhausted by December 20. The return of zero weather has caused a collapse of all exterior construction and building, and some interior work has been postponed for the season. The buildings that were nearer completion are using much builders' hardware now, but this slight revival will not last. Lumbermen's supplies are still moving, winter lines, such as sleigh bells and horse blankets are moving freely.

Winnipeg Quotations.

WIRE—Barbed wire, 100 lbs., $3.15; plain twist, $3.40; staples, $2.90; annealed wire $2.85 base; oiled, 10c extra; bright iron, $3.15 base; brass spring wire, 29c base, plain galvanized wire, 6, 7 and 8, $3.50; No. 9, $3.10; No. 10, $3.60; No. 11, $3.70; No. 12 $3.30; No. 13, $3.40; No. 14, $4.25; No. 15, $4.75; No. 16, $5.

POULTRY NETTING—57½ per cent.

HORSESHOES — "M R M" and "Bell" iron. No. 0 to 1, $4.50; No. 2 and larger, $4.25; snowshoes, No. 0 to No. 1, $4.75; No. 2 and larger, $4.50; steel, No. 0 to 1, $4.85; No. 2 and larger, $4.60; featherweight, $6.

HORSE NAILS—"MRM" cold process—No. 3, $4.30; 4, $3.80; 5, $3.55; 6, $3.30; 7, $3.05; 8, $2.85; 9, $2.75 10, 11 and 12, $2.65 in 25-lb. boxes.

WIRE NAILS—$2.80 Winnipeg and $2.35 Fort William.

CUT NAILS — $3 per keg base; pressed spikes, $3.30 base, usual extras.

SCREWS—Flat head, iron, 80, 10, 10, and 10 per cent.; brass, 75 per cent.; round head, iron 80 per cent; brass, 70 per cent.; coach, 67½ per cent.

Why Don't You Stock a Line That's Right?

IN stocking paints and varnishes, you should consider the permanent value of the customers you interest and not the immediate value. You can be sure of both by investigating before you decide on your stock. Sherwin - Williams Brighten Up Finishes include paints, varnishes, stains and enamels adapted to the finishing requirements of the most exacting housewife and property owner. There is a proper finishing material for every imaginable surface in and about the home. Ease of application, quality, working properties and economy are their important advantages.

By stocking this line, you identify yourself as a reputable dealer with a reliable manufacturer and have the advantage over your competitor in advertising, talking points, selling helps and best of all, in a *line that is absolutely right.* Drop us a card telling when it will be convenient for you to interview our representative.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal waterworks and sewerage systems, railway or mining news, etc.

Industrial Activity.

The telephone machine factory at Waterford has begun operations.

A permit has been granted Elliott & Son, for a furniture factory, at Toronto.

Wickett & Craig, Toronto, will erect an addition to their tannery to cost $10,000.

The T. Eaton Co. will erect an agricultural supply warehouse next year at Saskatoon.

The Ault Wiborg Varnish Co. intend to ask permission to build a factory at Toronto.

A Wisconsin rubber goods manufacturing company are looking for a factory site at St. John.

The Stewart Machinery Co. has applied for a permit to erect a $30,000 warehouse at Winnipeg.

The manufacturers of the Chamberlain weather strip propose locating a branch factory at St. John.

The Dominion Car and Foundry Co., Montreal, will build 62 new freight cars for the T. & N. O. Railway.

The National Mfg. Co., who have factories in Brockville, Ont., and other places propose to erect a building worth from $2,000 to $3,000, at Regina.

The Alberta-Pacific Elevator Co. will instal machinery in their Red Deer elevator for steaming barley for export trade.

Joseph Little, of Blairmore, B.C., contemplates establishing one of the largest lime burning industries in Canada, at Frank, Alta.

The Western Stove Mfg. Co., with headquarters in Portland, Ore., is likely to build a plant at Calgary, for their Western Canadian trade.

The National Iron Works have secured a permit for their first building on the Ashbridge Bay site, Toronto. It is a brick foundry estimated to cost $20,000.

The Canada Furnace and Iron Co. burned out a week ago at Three Rivers, are anxious to locate at Farnham, Que. From 300 to 500 men would be employed.

Mr. Moorehead, U.S. Consul at St. John, is making inquiries at that city for a Wisconsin saw-making concern, which proposes locating a branch factory in Canada.

L. W. Sarish, of London, England, representing an English firm of explosive manufacturers, has been looking over a sight for a proposed branch of their English business.

J. H. Glover, manager of the Aylmer Pump & Scale Co., was in Toronto recently purchasing a lot of new machinery for the manufacture of scales, which will be placed in the old pork factory building recently purchased.

McDonald Bros., of Grand Forks, the successful tenderers for supplying the steel piping to be used in conveying the water from Coquitlam Lake to New Westminster, have commenced work on their new factory at the latter place.

T. McAvity & Sons, who have been in the foundry business in St. John, N.B., for a century, associated with the McLean, Holt Co., manufacturers, of the same city, intend to establish a foundry in Fort William if terms can be arranged.

Irwin & Sons, of Hornings Mills, have purchased the building formerly occupied by S. Hill as a sash and door factory at Markdale, and will fit up the building with modern machinery for the manufacture of skewers, fork handles, etc. They will employ 20 hands or upwards.

The Berry Transformer Co., of Helspy, England, one of the largest concerns of the kind in England, is looking for a location in Canada, perhaps in London. This firm will employ 500 men. Sherbrooke, Toronto, Hamilton, Galt and other cities are after this concern.

The Hayes Mfg. Co., of Erie, Pa., has secured an option on a large piece of land at Montreal on which they will construct a Canadian branch for the manufacture of waterworks supplies, thus escaping the 35 per cent. duty. A $50,000 plant is to be erected on this land next year.

It was rumored at London that the Canadian-British Insulating Co., of Montreal, would establish a plant there. The company asks for free site, free taxes and free water, for a period of 15 years. In return, they would employ 500 men and use 500 horsepower. They have a capitalization of $5,000,000, and are looking for a suitable site in Ontario.

Dr. Becktel, of Cleveland, representing manufacturers in the wire business in that city, says the Standard Chain Works, of Sarnia, the Canadian branch of the American Standard Chain Co., is to be bought by the company which he represents. The present building is to be immediately enlarged, and a staff of forty or fifty first-class chainmakers will be employed from the outset.

Arrangements have just been completed at London, Eng., for the erection of a dry dock at Levis. The interests involved are the Canadian Pacific, the Allans, Harland and Wolff, Sir Charles MacLaren, representing the John Burn Co., of Sheffield; Mr. Davie, of Levis, who conducted the present salvage and dry dock business there, and the McArthur Perks Co., of Canada. The same interests have made a definite proposal to the Canadian government which they expect will be accepted for a dry dock at St. John.

The West Canadian Co., which operates coal mines at Lille and Bellevue, and is opening a new mine at Blairmore, has under way the construction of an entire new operating plant at its Bellevue collieries, which, when completed, will constitute probably the finest mining equipment yet installed in The Pass. The plant will include the most modern appliances for the expeditious and enconomical handling of coal, and when ready for operations will enable the company to put on the cars 2,000 tons of coal on an eight-hour shift. The improvements complete will entail an expenditure of approximately $250,000.

Municipal Undertakings.

A number of water pipe extensions are to be made immediately at Halifax.

Contracts for electrical pumps for Toronto's waterworks were awarded recently.

The sewerage system in the newly annexed districts of Hamilton, will cost about $125,000.

George B. Moork was awarded the contract for the Weston filtration basin, his figure being $2,675.

T. A. Murray, consulting sanitary engineer, Toronto, is to prepare plans for a water supply at Bowmanville.

This year about three miles of large mains and several miles of smaller mains were laid at New Westminster.

The South Vancouver Council has awarded the contract for the wood-piping in that municipality to the Municipal Construction Co., of Vancouver, at $72,000. The piping is to be delivered next June.

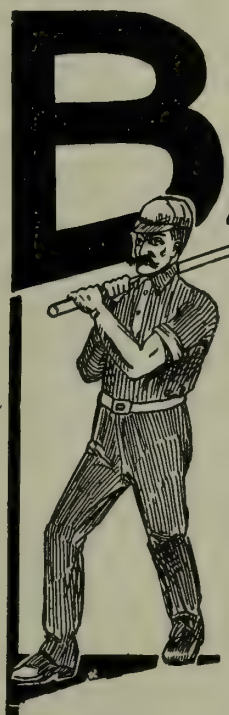
IVER JOHNSON
SAFETY AUTOMATIC REVOLVER

A revolver that can be discharged in any other way than by pulling the trigger is a mechanical absurdity as well as a constant danger.

The things you can do to an Iver Johnson Safety Automatic Revolver without discharging it would keep you busy all day. The one thing you can't do to it is—fire it in any other way whatever than by pulling the trigger.

Handsome in appearance, made in many styles—like a rifle for accuracy—hard-hitting and speedy—but always safe to handle.

Don't Let YOUR Profits Get Away



The Trade everywhere is making money on Iver Johnson Revolvers because they are good revolvers, absolutely safe revolvers, and widely advertised revolvers. We keep them before the reading public in the big magazines and the sporting papers.

Keep them before your customers, be ready to handle the enquiries we send you, get *your* share of the profits of our combined efforts.

Building Notes.

The City Dairy Co. will built a $15,000 stable at Toronto.

The Merchants Bank will erect a $11,000 branch at Toronto.

Grant McArthur will erect a $25,000 apartment house at Vancouver.

The work of excavating for the new Halifax Y. M. C. A. has been begun.

Kingston Oddfellows contemplate the erection shortly of a temple for lodge purposes.

M. J. McLeod & Co., Moose Jaw, will have a large departmental store erected in the spring.

John Ternes has secured the contract to build the new Bank of Commerce at Watrous, Sask.

W. A. Cole will build 100 houses next summer and spring in the Bayswater district of Ottawa.

Smith, Davidson & Wright, wholesale stationers, Vancouver, will erect a ten-storey warehouse.

Principal McKechnie is building a residence near the site for the new Estevan, Sask., school house.

H. T. Knott, Victoria, B.C., has been granted a permit for the erection of a dwelling at a cost of $2,300.

D. J. O'Keefe, Chatham, Ont., has taken out a building permit to erect a two storey residence. Cost $3,500.

Plans have been prepared for the Toronto Musical Union with regard to the erection of a building on University Ave.

James Cronin, of Spokane, has brought a lot on Shaughnessy Heights, Vancouver, where he will build a fine residence.

A. Lacombe, Montreal, Que., has awarded the contract for the erection of an apartment house to M. Huberdeau, at $25,000.

The Order of Grey Nuns are preparing to erect headquarters at Winnipeg next year. Estimated expenditure, $300,000.

The Merchants Bank of Canada plan shortly to erect a handsome block on the site of their present building at New Westminster.

Jeffrey Bros. were awarded the contract for building the Williams & Garland block at Portage la Prairie, on a bid of $10,900.

The I. C. R. management are considerining the establishement of first class hotels in the maritime provinces and on the Lower St. Lawrence.

Ald Martin, Cobalt, will erect a $50,000 hotel before next spring, the building to be six storeys in height, of fireproof construction throughout.

Building permits were granted recently at Vancouver to: A. Munroe, $2,200; J. Coleman, two houses, $3,200; J. Metcalfe, $2,300; A. Svenceski, $3,500.

The proprietors of the Wa Wa hotel, Lake of Bays, Ont., have decided to make an addition of over 40 rooms, to be ready for the opening of next season.

A. J. Hill, dwelling, $12,000; Kemp & Priest, three pair dwellings, $12,000; R. Burkell, two pair dwellings, $10,000 are recent building permits issued at Toronto.

The H. A. Massey estate made a proposition to the Senate of Victoria University, Toronto, to erect a men's residence on the university property. The offer was accepted.

Leslie & McNeil, St. Marys, Ont., have been awarded the contract for the masonry work of the Mutual Life Assurance Building at Waterloo, Ont., at $70,000. Total estimated cost $175,000.

Senator Melvin Jones, Toronto, has purchased a large site on St. George St., where he will shortly erect a residence; R. G. Geary has applied for a permit to build an apartment house there, at an outlay of $10,500; H. J. Hudson is to build a three storey apartment house, at Wilton avenue and Jarvis street. Cost $40,000.

The complete building returns for St. Boniface to date have been compiled and show a season of great building activity. The figures comprise those of St. Boniface proper and Norwood, which is a part of Winnipeg over the river, and include many fine cottages and houses besides warehouses, factories, churches and schools. The statement gives permits for 187 structures valued at $210,000.

Railway Development.

The Quebec Street Railway are considering the extension of their road to Cap Rouge.

The Southwestern Traction Co. intend to extend their line to Aylmer and Delaware probably within the year.

Both the C. P . R. and G. T. R. will seek power at next Dominion parliament to build more branch lines in the west.

The Edmonton Radial Railway expects to place contracts within the next six months for constructing 10 miles of single and double track.

The Regina Southern Railway intend building two lines to the International boundary; one through Rouleau; the other via Willow Bunch.

The People's Railway line from Stratford to Guelph is assured. Branch lines may also be built from the latter city to Erin, Arthur and Lake Puslinch.

The new C.P.R. branch line across the prairies from Saskatoon to Wetaskiwin has been completed. It is 330 miles in length, and has been under construction for the past two years.

C. R. Stovel, right of way agent for the C.N.R., was recently in the Stettler district, to obtain right of way for the line from Vegreville to Calgary. The grading from Camrose to Stettler is practically completed.

Steel-laying and driving piles for the bridges on the Ste. Rose branch of the C. N. R. east of Ochre river, Man., have been commenced by the Mackenzie & Mann Construction Co. This work will be rushed to completion before the winter.

"We will let the contract for the construction of the first 50 miles of the Alberta and Great Waterways Railway within a couple of weeks, and if the present favorable weather conditions continue we expect to do considerable construction yet this year." This was the announcement made by Wm. R. Clarke, president of the railway.

Mackenzie & Mann interests contemplate the construction of an extension of the Quebec & Lake St. John Railway from Roberval through to the Chebougamou mining country, running in a northwesterly direction, and passing through St. Felicien. Work on this road will start as soon as the winter ends, and will be pushed through without delay to Chute a Pours, where there is a very extensive water power.

The work of surveying for the transcontinentals now entering British Columbia is to be rushed with vigor during the next few months. A Grand Trunk Pacific party is in the territory between Nicola Lake and Kamloops, while the Canadian Northern outfit, which has been on the North Thompson all summer is preparing to push on from Cranberry Lake. Another party will work in the Yellowhead all winter for the same company.

BOOK REVIEWS.

Metal Spinning.—Popular Mechanics Co., Chicago, is publishing a series of handbooks on industrial subjects written, like Popular Mechanics magazine, "so that you can understand it," and intended to furnish information on mechanical subjects at a reasonable price. No. 2 of this series is just out. It deals with a practical instruction in the fascinating art of "metal spinning." The author is Prof. F. D. Crawshaw, M.E., assistant dean of the College of Engineering, University of Illinois, and he treats his subject in a thorough manner, telling first the history of sheet metal and the introduction of metal spinning, the lathe and its parts, the tools required in the work, the preparation of the metal, winding up with instructive chapters on the spinning of a number of articles. Various metals are dealt with, and numerous illustrations help out the text. The price is 25 cents, it being an 80-page, cloth-bound work and is said to be the only book published on metal spinning. Orders can be filled in Canada by the Technical Book Department of the MacLean Publishing Co., Toronto.

A WELL LIGHTED STORE.

Montreal, November 16.—It is always unpleasant to customers to enter a poorly lit store. In a recent conversation a Montreal merchant said that for several months he had let his store remain in a badly lit condition and now, after changing this he had increased his trade. He laid it all to the fact that he had improved the lighting.

Look your store over and see if it needs anything of this kind. S.R.

The Retail Paint Trade

WASTE OF OPPORTUNITY.

It is safe to say that more than 60 per cent. of the advertising put out by paint manufacturers is wasted, writes V. W. Hartmann in the Hardware Trade. Wasted for lack of "team work" on the part of dealers.

To state the proposition in another way, retail paint dealers in the aggregate are losing 60 per cent. of the advertising placed at their disposal by paint manufacturers.

With the ample facilities supplied, there is no reason why every retail dealer should not have a live, profitable, growing paint trade. Every sign, every color card, booklet, folder is made to play an important part in pushing the dealer's business forward.

Signs of many kinds are supplied the dealer—signs for his counter, windows, the front of his store, for fences, to be placed in the intersection of well travelled roads. It is obvious that these signs must be used in the different places for which they were designed and specifically made if the dealer is to benefit or be benefited by them.

Incredible as it may seem, many dealers fail to make use of such signs. It is not an unusual thing to find quantities of good, sales-producing signs kicking around the store, going to "seed," so to speak, unused and utterly useless just because they were not placed where they should have been.

One dealer used fifty fence signs, made of wood eight inches wide and five feet long, to complete a fence around his chicken yard. It is needless to remark that his paint business never amounted to a hill of beans. He is not in business at all to-day. He failed. This, of course, is an extreme case, but a true one for all that.

Team work in advertising invariably brings the dealer into prominence, places his paint business on a profitable basis and keeps it lively.

I am sometimes inclined to believe the woeful lack of appreciation of the value to the dealer of the advertising material supplied him lies in the fact that it costs him nothing. It is safe to assume that if the dealer had spent his own money for this material he would value it and its

"the finish that endures"

Floorglaze

It sells the whole year through. M. L. Floorglaze (now in Transparent Lacs as well as Solid Enamel Colors) has so many uses about a house, both indoors and out, that it's one of the steadiest sellers in the trade. And remember, M.L. Floorglaze **stays sold**—there are no complaints—no come-backs—it gives genuine satisfaction, always.

There's a fine proposition awaiting the live dealer in your town for M. L. Floorglaze. Get a sample can new color card—and proof of the desirability of this line to-day from

business-producing power fully 100 per cent. more than at present.

How far from the truth am I in this supposition?

But let us go back again to the successful dealer's store and see how he conducts his paint business, or rather how he secures the full benefit from the advertising he has to make use of.

At least one of his windows contains an attractive paint display, tastefully arranged. In the store his paint department occupies a prominent location. Color cards for all the paints and finishes he carries are within sight and reach of customers, not tucked away under the counter out of sight. Even if you don't want to buy paint, you cannot leave his store without carrying with you the knowledge that he sells paint. And that knowledge sticks by you, is driven in a little deeper each time you go there.

You purchase some article, it is wrapped up and you take it home. On opening it you find a nicely printed folder inside telling you about floor paint, carriage paint, enamel, varnish or stain for some use. You do not happen to need any just then, but the chances are that when you do you will hike to this store to get it.

Along in the spring you get a letter from the successful paint dealer. There is a color card or a booklet inclosed. These tell you about house and barn paints. And your buildings really do need a coat of paint!

What is the result?

Then your local paper comes, a day or two later, and almost the first thing you see is the successful paint dealer's advertisement; once more the fact is driven into your mind that you ought to paint the house this spring. You finally decide it must be done.

Who gets your paint trade?

PAINT AND OIL MARKETS

MONTREAL.

November 26. — Business still keeps very steady, some encouraging orders coming in from those who think this a good time to stock up a little. Prices have been without change, and the tone is satisfactory, all the way round. Ready mixed paints have gone out well, especially locally, and there has been an active demand for household specialties, such as varnishes, stains and enamels in handy sized tins.

TURPENTINE—Buying has improved a little, owing no doubt to the recent drop in prices. The market is steady for the time being, and we continue to quote from 78c to 80c for single barrels.

LINSEED OIL—Buying continues very good, and if anything a more speculative element has entered into the ordering. The idea that linseed will be higher in the near future has no doubt influenced this. For the present, prices are unchanged, and we quote: 1 to 4 barrels, in one delivery, raw, 73c per gal.; boiled, 76c per gal.; net 30 days, f.o.b., Montreal.

GROUND WHITE LEAD — Buying continues to show improvement, although there is no rush on by any means. The market seems closer together, but no great changes are announced, and we quote: Strictly pure about $5.25 to $5.75, according to quality, and No. 1, $4.85 to $5.25, f.o.b., Montreal.

RED LEAD — A steady buying movement is reported, and users are apparently putting in fair stocks for the winter and early spring. Prices are steady and we quote: Genuine red lead in casks, $4.25; in 100-lb. kegs, $4.75; less quantities at $5.75 per 100 lbs.; No. 1 red lead, casks, $3.75; kegs, $4.25, and smaller quantities, $5.25.

WHITE ZINC—The market is on the whole quiet, and without any marked feature. Quotations are unchanged: Dry V.M. Red Seal, 7½; Red Seal, 7c; French V.M., 6c; Lehigh, 5c; white zinc, ground in oil, pure, 8½c; No. 1, 7c; No. 2, 5½c.

VARNISHES AND JAPANS — Varnishes are in good demand especially the handy sized tins for household use. Larger consumers are also purchasing well. Japans have also experienced a flurry owing to the mild weather.

PUTTY—Putty continues to sell well, and grinders are satisfied with the way trade is shaping. The market is unchanged, and we quote: Standard putty, 800 lbs., in casks, $1.75; in 100-lb. drums, $2; bladder putty, 400 lbs., in barrels, $2.15; in 100-lb. cases, $2.25; in 25-lb. tins,

White Lead

At the present time the white lead situation is interesting.

We are the only firm in Canada who corrode and grind white lead, in addition to making Varnish, Dry Colors, Paints, Enamels, etc., etc.

Our white lead proposition is naturally the very best.

TORONTO.

November 26.—This passing week has been perhaps the best paint selling week of the month. November itself is the best month in years that the paint trade has experienced, due almost entirely to the fair and mild weather which has prevailed. The past few sharp days have made for some business in hurrying up orders for immediate delivery, but it is expected that now winter has made its first announcement trading will decline somewhat and outside painting cease.

Glass and putty are the particularly active lines just now, and the recent chilly days have boomed the business, everybody wanting glass immediately. Prices are very firm, with advances in prospect for next year. Turpentine on little trading has declined, but oil while slow in movement is strong in price. Some paint lines across the border have increased in price, and it may be that white lead and ready mixed paints will go higher here. Household lines are opening up again with the approach of the Christmas season.

TURPENTINE—An easier feeling brought a decline in the quotation on turpentine from 83c to 82c early this week, and now the continued uncertainty has further reduced the price to 80c for single barrels. The market at the south at the present time is quiet and depending a good deal upon the weather conditions there. For the past month they have suffered a good deal from drougth and great danger of fire in the bush but this has enabled them to get out the last of the season's supplies more promptly than usual for the month of November. There is somewhat of a demand usually at the beginning of December, which leads to a probability of advances but, of course, this is uncertain. Locally the demand is very light, but at the same time stocks are light, as is usual at this season of the year.

LINSEED OIL—This line remains firm, the price of seed keeping very high. Crushers are holding the market steady. Trading is light. Single barrels of raw oil are at 73c a gallon, and 76c is the price of boiled in the same quantities.

GLASS—There is a prospect of higher prices about the beginning of the new year. At present the price is very firm at 30 p.c. discount straight, although on big orders an extra 5 p.c. may be obtained. The steamships Montford and Montreal, the last two boats of the season up to Montreal from Antwerp brought along enough glass to relieve the present stringency, but both boats left behind on the docks at Antwerp several thousand cases of window glass. Not a glass trader in Toronto to-day but says he could easily take care of another thousand boxes at the present time. The glass left behind will arrive via St. John or Portland about the end of the year, and with the higher freight charges is expected to sell at 25 p.c. By next May, when navigation again opens in the St. Lawrence a still further advance of 5 p.c. is said to be on the tapis, owing to the higher prices asked in Belgium.

PUTTY—Like glass, putty is selling well at present, the many new houses being closed in has made the demand very active and kept the prices firm. Bulk in casks is $1.75 per hundred pounds; 100-lb. drums, $2; and bladders in barrels are $2.15.

WHITE LEAD — Current business is moderate and prices are unchanged, running from $5.55 to $6 for ordinary quantities.

RED LEAD—Quotations range from $4.25 to $4.55 for quantities and quality. Trading is steady.

HOUSEHOLD LINES—The advent of the Christmas season has awakened demand for a number of lines. Varnishes are selling in satisfactory proportions, and good calls are made for polishes, floor wax, stains, enamels, borax, bronzes, chamois skins, brushes, and cleansers like liquid veneer, etc. Ready mixed paints are a trifle slow. In dry colors there is a fair demand for blacks and the various colors.

PETROLEUM — Continued active business prevails at unchanged prices. Conditions, too, remain unchanged. Prime white is 13½c; water white, 15½c; and Pratt's Astral, 17½c.

PAINT NOTES.

Jos. Phennemore, at $1,245, has the painting contract at the new Logan avenue school, Toronto.

R. Montgomery Rodden has awarded the contract for the painting and glazing of one pair of semi-detached and one single residence on Roslyn avenue, Wesemount, for W. T. Rodden, to H. Belhan, Montreal.

The Canada Paint Company

It Satisfies the Neighbors, too

A paint that looks well and wears well is bound to attract the attention and favorable comments of the man who lives next door—just as the paint that fades, checks and chalks off in a few months is bound to attract his attention and his condemnation as well. *Once on* it stands as a testimonial or as as charge—a recommendation or an accusation. The dealer who sold it is on trial and the neighbors are the judge and the jury.

MARTIN-SENOUR PAINT—100% Pure

satisfies the neighbors—it meets every requirement of a *good paint*—it shows its quality in the can and as it flows from the brush, and months afterward *there it shines*—a testimonial to the honesty and skill of its makers. Trust the man who's going to paint to see to it that he does not get the "peel-off" kind. He's going to ask neighbor Green whose paint he used that peeled off—and then he'll ask neighbor Wise whose paint he used that stood the test of time so well. Moral:—Let the other fellow sell to neighbor Green—you get the Martin-Senour Paints and you can sell to neighbor Wise and all his friends.

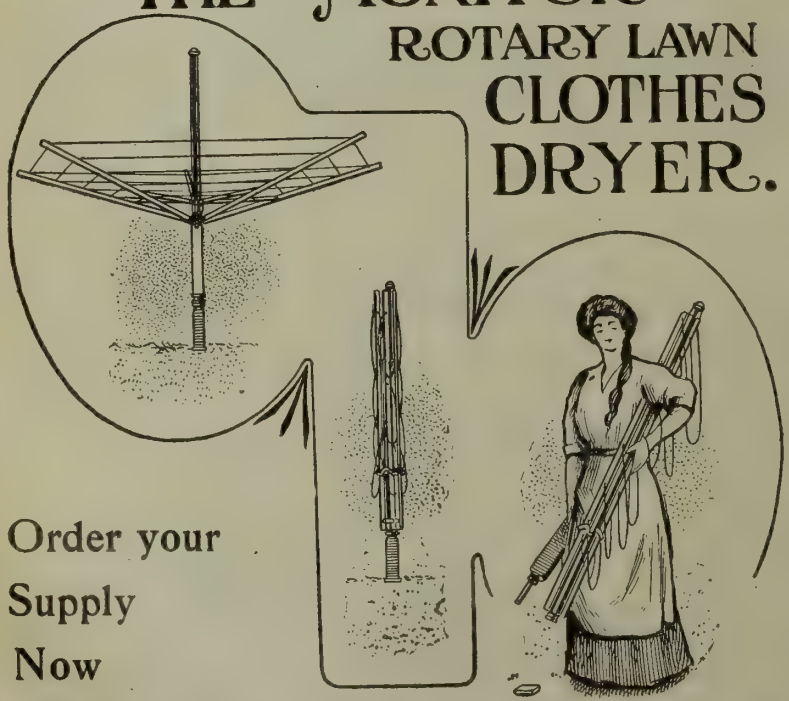
This is Expert Evidence Regarding

The Ross Rifle

CAPT. CARSTAIRS, Musketry Instructor, Strathcona, Alberta, says :—

"Your rifle is the best in existence and it comes "up to my own ideas of what a rifle should be."

The Ross Sporting Rifle is equal in efficiency, material and finish to the Ross Military Rifle.



Dealers everywhere are increasing their orders and the sale of Ross Rifles is an ever growing one.

If you are not yet handling them, write us at once for full particulars.

ROSS RIFLE CO. - - QUEBEC

Something that every housekeeper will want

THE MONITOR ROTARY LAWN CLOTHES DRYER.

Order your Supply Now

and on account of our advertising it won't be long before they'll be coming to your store asking for the

MONITOR

150 ft. line, and every line within easy reach. Stand in one spot to hang out a large wash.

The lines come to you

NO tramping through wet, snow or mud, carting a heavy clothes basket around the yard. NO soiled clothes. NO dirty lines. NO obstruction on lawn or in yard. NO trouble to set up and take down.

"You know the difference between 'claims' and 'proofs.' Claims MAY hold customers, but proofs WILL hold customers."—*The Philosopher of Metal Town.*

Mr. Hardwareman

Are you aware that **EASTLAKE METALLIC SHINGLES** are the best steel shingles on the market? Now we are not claiming anything we cannot prove.

"EASTLAKE"

"Eastlake" Steel Shingles were produced twenty-five years ago—long before any other steel shingle. The roofs that were covered with "Eastlake" Shingles that first year are to-day in as good shape as when they were laid—never having needed repairs.

STEEL SHINGLES

No other galvanized steel shingle can even claim such a record. Remember this fact when others say to you "My shingles will last a century."

Satisfy your customers. Give them a shingle that has proven itself—that you know will insure the utmost satisfaction.

"Eastlake" Steel Shingles are made by the oldest and largest sheet metal building material firm in Canada—a firm whose policy has been "Protection to the Dealer" from the start.

We also manufacture **Galvanized Cornices, Skylights, Ventilators** and **Finials, Metallic Ceilings, Siding** and **Lath, Corrugated Iron, Conductor Pipe, Eavetrough, Fireproof Glass Windows, Doors,** etc., and Architectural Sheet Metal Work generally.

Write us for catalogue and estimates.

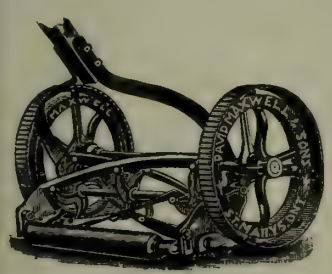
"If Maxwell Made It It's All Right."

That's the reputation our Washing Machines, Churns, Lawn Mowers and other hardware specialties bear throughout the country.

That's why the Maxwell line sells so well.



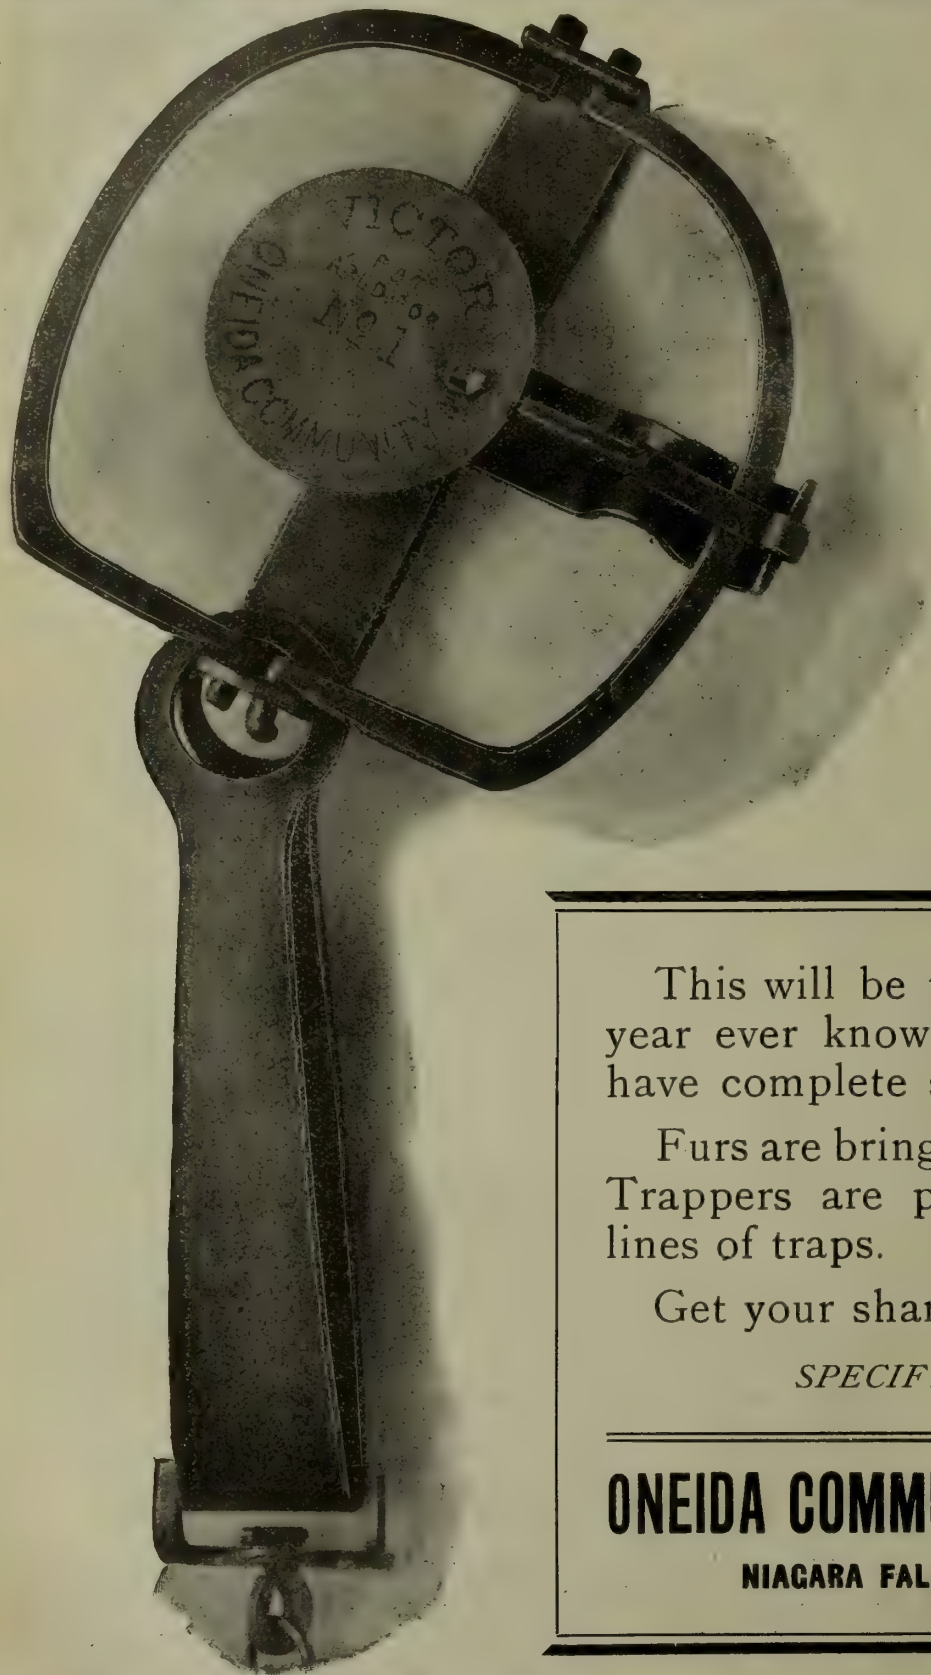
That's why dealers who handle Maxwell machines find them good advertisements.

Maxwell's latest is the

Champion High Speed Washer

It has all the good features of our famous "Puritan," with a new "momentum" driving mechanism. The heavy balance wheel, revolving 4 times for every stroke of the lever, makes the "Champion" run very smoothly and easily. Get some in your store for customers to examine.

Maxwell Lawn Mowers



stand out prominently as the best made on the market. They are made with cold rolled steel shafts, crucible steel cutter knives and plates, and in all details from the best procurable material. In easy running and long wearing qualities they are leaders.

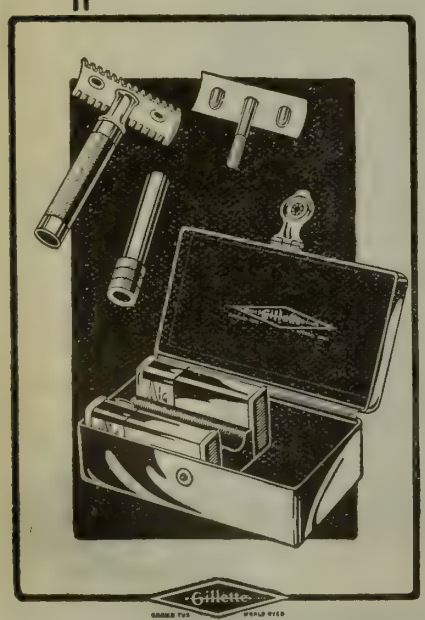
Are Your Gillettes Getting a Chance

to sell themselves for Christmas presents? You'll be surprised, and pleased, too, to see how many of them will succeed, if you give them a fair show—in display and salesmanship.



You know how hard it used to be to satisfy the Christmas shopper who was looking for a good, sensible gift for a man. The GILLETTE fills that gap in your stock to perfection.

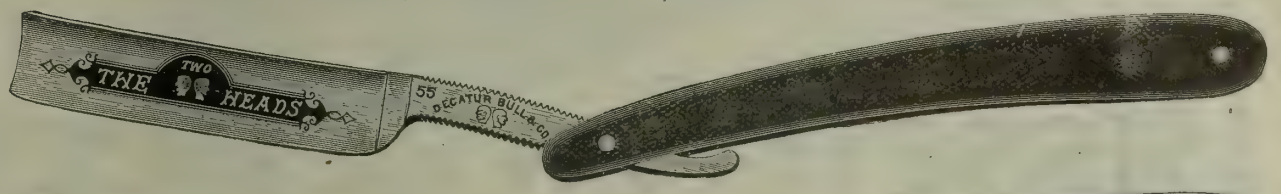
The GILLETTE is a gift worth while—at a price that just suits the average purse. Gold or silver plated or gunmetal finished cases, with handle to match, the GILLETTE is as handsome as a piece of jewelry. It's a personal convenience to the man who receives it, every day in the year. It is absolutely the best razor in the world.

Have you anything else in your store, at $5.00 or anywhere near it, which will give a man so much pleasure and genuine satisfaction?

Have you anything else in your store which insures you a steady and profitable future trade, like the trade in GILLETTE blades?

Make the most of the splendid opportunities for GILLETTE business which this Christmas season offers. Keep the GILLETTE in the lime-light, where it deserves to be, and it will not disappoint you.

Don't forget the GILLETTE signs. Thousands who have read our advertisements are looking for the stores which display them.



We are filling orders as fast as our factory, working night and day, can turn out the goods. If your stock is light order at once, so as to be in time.

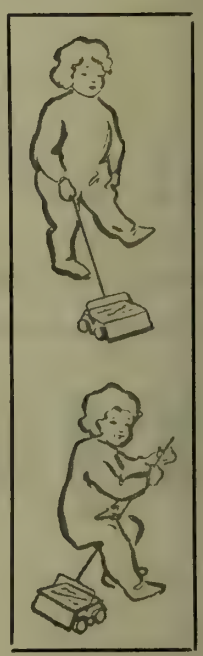
How the Tremendous Advertising



of the

Bissell Sweeper

Swells the Demand for the Dealer

¶ All the best advertising experts of the country agree on the proposition that only an article of genuine merit can justify a large advertising appropriation year after year.

¶ Measured by this standard the Bissell Sweeper occupies a conspicuous position among advertised articles, as it has been advertised continuously for thirty-three years, during which time the demand has constantly increased until to-day the Bissell is the acknowledged leader throughout the world. This is not a mere claim, but a fact fully understood by every one knowing anything about the carpet sweeper industry.

¶ Our advertising is not sporadic or spasmodic, but universal and continuous, and our customers get the benefit of this through the demand we are creating for our goods. Our advertisements are carried in all the high-grade magazines of large circulations, with an aggregate circulation of over 20,000,000, covering the reading population of the United States and Canada.

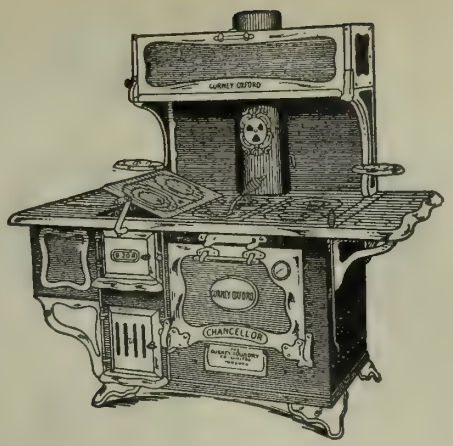
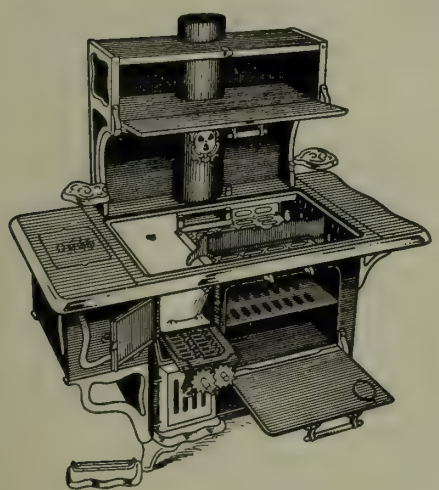
"JEWEL" STOVES and RANGES

The Ideal Jewel Heater With Its New 1909 Dress



Dress does not make the man, neither does it make the stove, but it certainly improves the appearance of both man and stove.
The Ideal Jewel has been on the market for a number of years and proved itself a Perfect Heater in every way. Now, that it has been redressed, it is one of the handsomest and most thoroughly reliable heating stoves on the market.
Mr. Stove Dealer—If you expect your full share of the fall trade you must keep your stock up-to-date. The Ideal has every modern improvement known to the stove trade. With or without oven.

Manufactured by



The Burrow, Stewart & Milne Co., LIMITED

Hamilton, Canada

The Dealer Who Sells the "Chancellor" Steel Range is the Man with the Best Stove Argument

That's a strong statement considering that now-a-days there is such a galaxy of stoves offered. However, what we say is based on facts. The Chancellor Steel Range is to-day without an equal. Its beauty of design is quickly appreciated and that whereby your customer will more readily hear your story. Then the inner workings of this range invariably convince the customer you talk quality—and the goods prove it. You talk efficiency—and you take each factor as you have it in the "Chancellor,"—reversible grate that gives a clear fire—that is quickly removed without disturbing linings—round cornered firebox—flue strip that guarantees a perfect baking oven. That and the rest is pretty good talk, Mr. Dealer, and when conscientiously given it always gets the sale. Think it over, Mr. Merchant—follow the best stove sign—it brings you just what your trade needs.

PLYMOUTH **WELLAND**

Use "PLYMOUTH" (Ship Brand) Lathyarns; they will save you money and increase your satisfaction.

Special care in the selection of the raw material, coupled with the "PLYMOUTH" spinning, which is noted for its evenness and uniformity, easily place our Ship Brand yarns at the top as regards quality and efficiency. These two factors mean satisfaction and economy for the user. No heavy surplus of tar to pay for—an equal weight of "PLYMOUTH" yarns will give a greater number of smooth, strong ties than any other that can be bought.

Recognized everywhere by the largest buyers as the best and most economical. Why not use it?

ROWE Sanitary Lavatory

A MODERN LAVATORY WITH OUT PLUMBING EXPENSE

The Rowe Sanitary Lavatory costs less than washstand, bowl and pitcher, and is infinitely more convenient. Looks just like a running water lavatory and is practically as useful. Consists of a rustless, galvanized iron tank, with plate mirror front; white porcelain basin; galvanized iron pedestal, enameled white inside and out; nickel-plated brass fittings, nothing to break or rust. Perfectly sanitary. Placed anywhere without injuring wall or floors. Indispensable in country houses, hotels, etc.

AGENTS WANTED EVERYWHERE.

Live dealers can secure sole agency for locality by applying now. This is the best proposition on the market to-day.

The STEEL TROUGH AND MACHINE CO.
TWEED, ONTARIO Limited

THE

"DAISY"

INDOOR SANITARY EARTH CLOSET

Holiday Window Displays Encourage Early Buying

Windows Should be Used to Fullest Advantage for the Next Three Weeks—Advertisements Should Emphasize the Importance of Buying Early—Writer of Article Condemns the Use of Novelty Windows During the Rush of Christmas Trade—Samples of Work Done by Canadian Window Trimmers.

Of all times that the power of suggestion in a show window does its full duty, it is from December 1 to 24. Every one tries to attract the purchasing public more than his competitor, some spend large amounts in advertising to assist the window. This is good, but oftentimes you will see some merchant doing a fine business on holiday goods, where he has not expended quite so much money as his larger competitor, but he has devoted a great deal of thought in designing and putting up his holiday displays properly in order to produce sales directly. This is the window that does the work.

As an experienced hardware window trimmer, writes Max J. Elliott in the Hardware Dealers' Magazine, I offer a few pointers I have been taught, by experience, to be the best sales producers during this season. Begin early; try and be the first to make the showing of your suggestions for Christmas gifts. One reason why it is better to be the first, is that the first impression made on a person's mind is most likely to hold good. If a party sees something on display in your window that appeals to him or her, as a suitable gift for a realtive or friend, and this is the first suggestion made to them by any window, it is a hard matter to get them away from this first conclusion. Many may not buy at that time, but your window, having caused them to decide what to purchase, and having seen the price marked on the goods in the window, sometime previous, they have figured out their Christmas expense accordingly, and will come in due time to purchase, and naturally from the one having made the first impression in goods and price. If all the windows in your line in town are trimmed they will wait until all have been seen before making any conclusion. Then possibly they have seen so much they become confused and do not decide on anything in your line at all.

Make Window Sell Goods.

I would caution the hardware merchant against novelty windows during this season. By novelty windows, I mean a window constructed solely for the purpose of attracting attention. Some instal moving apparatus, others changing lights, or flashes, etc., and many, far too many, take up valuable space with Santa Claus figures, artificial chimneys, etc., to keep in harmony with the season. This, I consider, is an old and worn-out feature in Christmas window decorations, and does only one merchant any good—that is, the man who carries a very large line of toys. The majority of hardware

Reduction of Holiday Ad. Occupying Full Page in Parkhill Post Last December. Starts With Strong Heading, but Body is not Well Arranged. The Goods and Prices Should be Displayed Larger and the Matter at Top and Bottom Given Much Less Space

stores do not carry this class of goods; therefore, you must make a showing that will appeal to the older persons, not children, unless you are selling toys. If you have some novelty running in your window or a lot of space taken up with artificial chimneys, etc., the older persons in search of suitable presents, will congregate in crowds before your window. I will admit you are attracting attention, but the novelty or other similar attraction will have completely occupied their minds to such an extent that they immediately begin to discuss this instead of

Holiday Window Trimmed Last De cember, by H. J. Marshall, With Geo. W. Ecclestone, Bracebridge, Ont.

the goods you have on display in connection with the novelty; therefore, you fail to make the desired impression or cause the proper effect, that is, a sale made directly by the show window. However, while you have succeeded in attracting attention that will prove a good advertisement for you, but few sales are made directly by this class of window. I consider them detrimental to the holiday trade in the hardware store where no toys are carried. Another suggestion that will prove of value is to use various little signs in your window, not large half sheets, but small cards about 4 x 8 inches, to call attention to something useful for some particular relative or friend. For example, on a safety razor you might say:

A SAFETY RAZOR FOR FATHER, HE IS GETTING OLD AND NERVOUS, YOU KNOW.

There are many others much better than this, that can be used, which will make your window more suggestive, and by all means have a price on each article shown; do not use any fancy figures or lettering, but something neat and plain, made by hand, that can be read at a glance. Avoid the use of long phrases.

Make your backgrounds attractive, design something special for the class of goods you wish to display, take plenty of time and figure out exactly what you intend to use to display your goods on; put your decisions on paper and then follow them out. Do not try to make a window display by merely starting to work in the window and arranging things as you go. Have a fixed plan before you start, think over it well, decide on your colors, what you think will show the goods to the best advantage. All details should be carefully planned before you begin work, then do not vary from your plan. This also enables you to put up the display in much less time, as by having your plan to guide you, you can work more hurriedly. However, do the work neatly, and by all means keep your window clean.

Light Windows at Night.

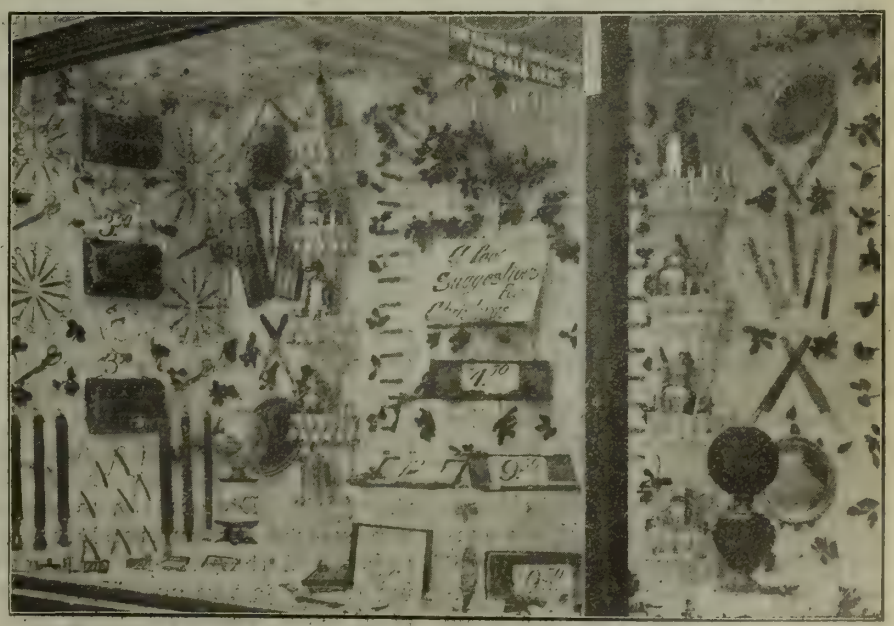
Keep your windows lighted at night. This, of course, applies to show windows the year round. Merchants generally are fast awakening to the fact that where attractive window displays are constantly used, they lose money by not keeping their windows lighted. During the holiday season it will be well to keep windows lighted from about 5 to 11 p.m.

When designing your window be sure to figure on showing the assortment of goods. For instance, you are presenting a class of goods made in several sizes or grades, each having a different price; show each price, give the public the assortment to select from; yet arrange the goods artistically and keep them classified as to sizes and prices.

DISPLAY AT BRACEBRIDGE.

Probably the best non-prize winning display entered in Hardware and Metal's Holiday Window Competition a year ago was one arranged by H. J. Marshall, with George W. Ecclestone, Bracebridge, Ont. Unfortunately it does not show to best advantage in the illustration but the general outline can be made out and an idea of the display obtained. Mr. Marshall says it was favorably commented upon in the local papers and credit was given him for getting up one of the best displays ever shown in Bracebridge. It was entirely original and not a copy of another display. A background of white cheesecloth was used on which a star and two crosses were utilized to display razors, shaving brushes, pocket cutlery, tableware, shears, hair brushes and shaving mirrors, below this being a row of strops and dog collars. On a raised platform several fine table lamps were shown along with a cutlery cabinet, carving sets, and hollowware, the same class of goods being shown at the base along with safety razors in cases. Cut glass, fancy dishes and clocks were also shown on one side suspended on plate glass shelves. Carving sets in cases were further displayed on a sample board on the side wall of the window, below this being hockey sticks and a sample board showing skates and hockey pucks. Price tickets were used freely on the silverware articles.

Inside the store holiday goods were brought to the front and displayed on tables, every article being price-marked, the result being a large increase over the previous years' business. Both Mr. Ecclestone and Mr. Marshall deserve credit for their enterprising methods.



Holiday Display Made by Taylor Bros., Carleton Place, Last Year.

CARLETON PLACE WINDOW.

Taylor Bros., Carleton Place, have three good windows in which to show goods and last year J. Ernest Wilson did his part by putting together three fine displays, the photographer, however, securing only one good picture, that of the window containing the large articles such as sleighs and carpet sweepers, this being reproduced to show the display both inside and outside the window. The use of ropes on the sleighs shown outside secure them for display, as well as from interference by boys. This window was arranged as follows:

In the centre of the window was placed a sweeper stand with three additional sweepers suspended by hair wire from the ceiling and on the bottom of the window sweepers are arranged to fill in around the stand. On the left of sweeper stand and to the rear comes Santa Claus just appearing round the corner, seated in a sleigh drawn by a toy black horse, three feet high. The construction of Santa Claus was very simple consisting of a horse blanket, two rolls of cotton batting for arms and a coat, a pair of gauntlets, a Santa Claus face, and a toque and he was complete.

The background of the window is constructed by suspending sleds from iron rods run across the back. Advertising signs and small fans advertising sweepers are strewn around the floor of the window. On the top of the background large fans of different colors are fastened and hung from the ceiling, to fill in the

Christmas (1908) Window Trim of Adamson & Sproule, Orangeville.

top of the window are tissue paper and evergreen decorations with flags interspersed. Across the glass hangs the sign "Welcome" and directly above it is the sign "Merry Christmas To All."

The leading window had a background of mirrors, the effect being too glaring, with a four-step stand in the centre. On top of the stand is a Thermos bottle and below are safety razors of all descriptions. Carving sets in cases, razor strops, nickeled tea pots, silverware and cutlery finished out the window, racks being used to show razors and pearl handled knives, while corks suspended by fine wire held pocket cutlery, scissors being also hung from the ceiling by invisible wire caught up in the centre, this forming two semi-circles. Mr. Wilson said the trade in cutlery was better than for many years, the display helping in this result. Price tickets were used on all articles displayed.

Mr. Wilson makes the sugestion that photographers elevate their cameras in taking pictures of window displays in order to show the flatware usually displayed on the base of the window.

AN ORANGEVILLE TRIM.

Adamson & Sproule, Orangeville, arranged the window of gift suggestions last Christmas, which is shown in the accompanying illustration, the white background making the picture show up poorly, the contrast between the cotton and the white silverware being very slight. The general arrangement, however, is commendable, holly, case goods, strops, lamps and sweepers giving variety to the display and relieving the sameness in color which is the chief weakness of the trim. The round shelving and the free use of price tickets are features worthy of notice. The window trimmer

"The back was made of boards 6 feet high, surmounted by a semi-circle canopy, covered with factory cotton and over that with red tissue paper, the ribs being covered with strips of gold paper, and a gold band 2 inches wide, around the base being hung with prisms. The small shelves on side and back of window were semi-circle, and had the edges trimmed with Nevada teaspons. The whole layout was exceedingly tasty and was a good business getter, many customers stating they had no idea such a complete line of these goods were kept in stock."

Mutual Insurance Idea Winning Support

Ontario Retail Hardware Association's Mutual Insurance Committee Receiving Many Encouraging Letters From Merchants Throughout the Province—High Rates Paid in Northern Ontario—Hardwaremen Urged to Write Letters to Senators and Members of Parliament Opposing the Proposal to Establish an Insurance Monopoly in Canada.

INSURANCE COMMITTEE MEETS.

The mutual insurance committee of the Ontario Retail Hardware Association met in Toronto, on Tuesday, and arranged a plan of campaign to follow in bringing the question of mutual insurance to the front and securing amendments to the Ontario Insurance Act, making it possible to organize a company in this province. The desired amendments were mapped out and a draft of a report outlining the remarkable success of the retail hardware mutuals in the United States was gone over. When complete this report will be submitted to the Insurance Department of the Ontario government and copies supplied to each hardware merchant in Ontario.

Responses to the circular letter recently sent out are being received in encouraging numbers and some of the letters which accompany the forms contain valuable information. For instance, E. W. McClung, Elk Lake, in Northern Ontario, a new member, writes:

> "I am in receipt of your circulars and what appeals to me mostly is the matter of insurance. In this northern country where new towns are growing up, the rate of insurance on business properties and stocks is 10 per cent. per annum for a policy in the best old line companies, who give a satisfactory policy and treat one fairly in case of a fire. And in spite of this, in the towns in this north country, the only hardware stores that have been burned are two at Haileybury and Latchford. In the big fire in Cobalt no hardware stores were burned.
>
> "With this high rate of insurance, it is impossible for the average business man to fully protect himself against fire, especially as nearly all who come here to do business have but a small capital to start on. The greatest danger in this country lies in forest fires, but if a municipality has any life in them whatever, they will arrange this satisfactorily, by having the forest cleared back to a safe distance, thereby giving people a chance to defend the town.
>
> "I am enclosing $3 for membership fee, and I also wish to have 300 of the printed collection forms which I have been reading so much about."

The average rate paid by hardwaremen in other parts of the province is from $1.75 to $2, but J. Walton Peart, St. Mary's, who is the most active worker in the Hardware Association for mutual insurance has a rate of only 77 cents, he having improved his store risk to such an extent that his rate has been cut down to about 40 per cent. of what it formerly was. One thing the St. Mary's Hardware Co. did was to take out an open elevator shaft, moving the elevator to a brick enclosure outside the store. This also made possible the establishment of a stove department in the flat above the store. If the St. Mary's Hardware Co., with their low rate of insurance, want still cheaper rates, it is not surprising that others are waking up to the fact that they are paying much more for protection than is necessary.

The more retailers who fill in the form and send to Secretary Wrigley, 10 Front Street East, Toronto, or Chairman J. Walton Peart, St. Mary's, the better equipped will the Mutual Insurance Committee be to bring about a new era in retail hardware fire insurance.

Kidd & Clements, hardwaremen and implements dealers at Wapella, Sask., were burned out early this week, but their store was covered by insurance.

Business Methods of Canadian Hardwaremen

Winnipeg Hardware Store Establishes Jewelry Department—Value of Enthusiasm in Business — Kingston's Market Day—Hardware Merchant Adds Furniture Department to His Store.

ESTABLISH JEWELRY DEPARTMENT.

Winnipeg, Nov. 24.—As an evidence of how a retailer might enlarge his business to increase his profit-making facilities, and at the same time meet the growing demands of the public, the case of the Ashdown retail house, of Winnipeg, adding a jewelry department to the store, stands out prominently. A few years ago J. Johnston, a thoroughly experienced jeweler, was engaged to take charge of the cut glass and china department, which at that time was located in a dark corner on the second floor. Last summer he succeeded in having his department moved to the main floor, where it now occupies one-half of the front portion of the store. Week by week new lines were added to the stock, until at present an up-to-date jewelry department is in full operation. Cut glass and china goods are still an important feature in the stock, and the introduction of other lines has only stimulated the trade in these lines.

When asked as to what tactics he used in drawing the attention of the public to his new lines, Mr. Johnston said: "I believe in pushing one line at a time, advertising it in the window and the local paper. Last summer I was slightly over-stocked with cut glass, ice cream trays, and I set about selling them as though I had nothing else in the store. In the fall I had a few left and I displayed them in the window and advertised them as cold meat trays, and they continued to move until I am completely sold out. The cut glass trade has brought other trade. Now I am conducting a campaign in hand-painted china, and it is going to be a success. In a few weeks I will push watches, and as the trade in this line is already growing, I know it will be profitable as a single liner. By going on like this I am building up my whole business. There is no reason why more hardware merchants don't branch out. At least they could start with souvenir goods, such as spoons. That trade is rightfully theirs, and more could have it if they made an effort to get it."

L. C. H.

ENTHUSIASM IN BUSINESS.

Ottawa, November 23.—"I could talk about these goods all night. They're simply exquisite and everybody who sees them says the same."

Whole heart, whole ambition, whole force, whole life, applied to business. Every word and intention the embodiment of keenest interest in his work. But how else should a hardware or any other merchant be?

Does business go? It does and goes well. Cannot help but go where one is enthusiastic over his wares. Many a business man would succeed better if he made his life part of his business and his business part of his life—the two one and yet two—two in substance but one in purpose, and that purpose success.

And isn't that the only way to succeed! If you do not enthuse over your goods, how can you adequately convey to others their merits, or how can you expect your clerks to do it? Let a portion of yourself appear in each sale, as it were. Enthusiasm is contagious and if you've the right kind of stuff the result will be certain.

But not only should this spirit be demonstrated by the proprietor. Every clerk should possess the same characteristics, for not only will it benefit his employer but it will also accrue to him. The contents of his weekly envelope will grow just in direct ratio to his business ability.

G. E. M. H.

KINGSTON'S MARKET DAY.

Kingston, December 1.—An advertising plan adopted by many Kingston merchants is that of having different colored paper and cord for the wrapping up of parcels. For instance, the firm of McKelvey & Birch, one of the largest hardware houses in the city, uses agate-colored paper to wrap their parcels, and the fact has become so well known, that purchases made at this store, can be recognized at a glance.

A visitor to the Kingston and Pembroke Railway station, on Thursday of each week would be surprised to find a large assortment of parcels, with paper of various colors, other parcels tied up with colored cord, and still others, bearing some particular kind of label or "sticker." It is on Thursday that the assortment is particularly noticeable, this being due to the fact that on this day the railroad runs what is known as the "market train" to the city. People at Sharbot Lake and intermediate points being allowed a single fare for the return trip each Thursday. The train reaches the city at 8 a.m., and returns at 5 p.m., thus giving them all the morning to do business on the market, they being allowed to bring in dairy produce on the train free of charge. The afternoon can then be devoted to shopping. Kingston merchants have found this a great boon to business, as some Thursdays as many as two hundred people come into the city. The "market train" is certainly a money maker for the merchants of Kingston.

E. G. B.

ADDS FURNITURE STOCK.

Tillsonburg, December 1.—C. W. Conn, who recently added a furniture department to his hardware store, reports that his venture has been quite successful and has resulted in an increased trade. A furniture merchant in an adjoining store to whom Mr. Conn had sent many customers, was induced to add a stock of stoves to his store, with the result that Mr. Conn decided to utilize the flat above his store as a furniture showroom. Mr. Conn has done some enterprising advertising in the local papers, drawing attention to the addition of furniture to his line and pointing out that he can now equip the house for newly married couples.

G. W.

SPECIAL PRICES TO CLERKS.

Toronto, December 2.—A question recently discussed by two local hardwaremen was: Should we give employees special prices on goods for their own use?

One said his idea was to furnish such goods at invoice price with freight and cost of doing business added. The other, however, contended that employees should pay everything but the net profit made by the merchant. Ten per cent. off retail prices on some things would do, but on others not more than 5 per cent. He pointed out that some department stores had a schedule according to the term of service of employees: To those over one year, 10 per cent. off retail prices was given; to those employed several years, 15 per cent., and to older employees, 20 per cent. He thought this a much better way than adding freight and cost of doing business. He did not believe in educating employees and the public in the knowledge of the details of cost of doing business.

PUBLISHED EVERY SATURDAY.

A HOLIDAY NOTE BOOK.

No season of the year is so productive of trade-bringing ideas as the month of December, when the minds of all progressive merchants are concentrated upon evolving plans for increasing their trade by adopting methods which they hesitate to use at any other time of the year. Larger space is taken in the local papers, the windows are changed more frequently and more thought is given to the displays, booklets are sent to customers, the pricing of goods in plain figures to assist the selling, the clerks work more overtime, the buying problem is more important, the effort to sell early and deliver at the last moment and the adoption of plans for interior display all bring up questions which cause thought.

All of these have to be met and acted upon without delay, but in the rush of holiday trade ideas will develop which can be used in next season's trade, and unless a merchant plans to jot these down when they occur to him they will vanish and not be thought of again until they present themselves in new form a year hence. It's when the holiday shoppers are out in force and everything betokens the approach of Christmas that real inspirations knock on the average man's skull and prod him into saying, "If I had only thought of that in time what a hit it would have been. Too late now."

Each retailer should obtain a blank note-book, print on the outside cover of it in big bright letters, "Holiday Ideas," and then proceed to jot therein the things he ought to have "thought of sooner." Put down a few bright window suggestions as they come to you while Santa Claus is grinning at you from all sides. Add a few advertising hints and note down the things that go the best for Christmas gifts; the things most called for that you did not have; and the things your business neighbors carried that in truth belonged more to the hardware store. Paste in a few of the most striking advertisements issued by the city stores who do things on a bigger scale than you can afford to.

Don't confine your observations to your own store, or even to business hours, but take a stroll around the stores with your eyes open. The jeweler or dry goods merchant may have ideas that a little skill would render more fitting in a hardware window.

Jot these things down in your special book and file it away among the things you know where to find. Then next season turn to your note-book and begin the sifting process. Some lines so popular a year ago are out of date now. Still there lies before you a big chunk of holiday atmosphere with its inspirations as well as some suggestions ready made.

PROPOSED STOVE MERGER.

There is a movement on foot to bring about a merger of the Canadian stove manufacturers. The movement has not developed much of an impetus so far, but it has been given a start. Similar movements made heretofore have been abortive. Time only will tell what will be the fate of the present movement.

While, of course, the general good of the stove manufacturers of Canada is in the minds of the promoters of the enterprise, one thing particularly which is sought is the development of the export trade.

The stove export trade of Canada so far does not amount to a row of pins. It is $10,000 less than it was five years ago. The value of stoves exported from Canada in 1905 was $18,192, while last year it sank to $8,569.

Our best customer in stoves is the little Island of Newfoundland, but it only took 388 stoves last year. The United States came next, with 116, while the number exported to all countries was 574.

South Africa, which is just now buying a good many stoves, particularly from Great Britain and Switzerland, does not figure in our returns at all, yet we have a direct line of steamships running between Canada and that British colony. Stove manufacturers, therefore, do not receive any benefit from the $143,000 subsidy which the Canadian Government annually grants this steamship line.

Under the old French regime Canada had quite a reputation as a manufacturer and exporter of stoves. The foundry was connected with the forges at Three Rivers, and when the private company running it went into bankruptcy His Majesty the King of France continued the industry. The export trade was chiefly with the British colonies on this continent.

Should the proposed merger go through it is the intention of the promoters to make special arrangements for the development of the export trade.

As already noted, the movement has not gained much impetus yet. It will be interesting to note whether it will develop sufficient speed in order to successfully reach its intended goal.

WRITE YOUR SENATOR.

The Banking and Insurance Committee of the Senate which has the new Dominion Insurance Act before it for amendment, has decided to postpone consideration of the Act until after New Year's.

Every hardwareman who is interested in securing cheaper fire insurance should, therefore, take advantage of the delay to write letters to the local member of parliament and the Senator from his district, urging upon them the necessity of refusing the demands of the Insurance companies that they be given a monoply of the insurance business in Canada. They aim, as was pointed out in Hardware and Metal a week ago, to exclude all foreign unlicensed companies from doing business in this country. The manufacturers are up in arms against the combine and the retailers are equally interested in defeating the effort to establish a monopoly.

Hardware merchants in the United States can obtain $30,000 worth of insurance at board rates and get rebates averaging about 40 per cent. Ontario hardwaremen want the same privilege, but it will be denied them if the proposed act becomes law. Write the local M.P. and Senator at once, so that they can know what public opinion is on the matter.

A GOOD THING FOR CANADIAN SHIPPERS

It begins to look as if Canada is going to find the Tehuantepec route of practical service in the development of trade between the Pacific and the Atlantic Coasts.

Business men are only too well aware that freight rates on the transcontinental route militate to some extent against the development of trade between the business men of eastern Canada and those on the Pacific Coast. To ship from Liverpool is cheaper than to ship from Montreal.

By a line of steamers co-operating with the little 193 mile line which runs across Mexico from Puerto to Salina Cruz we are in a fair way to solve the problem.

The first steamer to leave a Canadian Port to connect with the Mexican railway left in June last and carried a shipment of only 45 tons, the products of Canadian factories. The boat which left on November 15th, however, carried 1,500 tons. This substantial increase is encouraging.

Although the freight has to be transferred from the steamship to the railway at Puerto and from the railway to the steamship at Salina Cruz, it can be carried from Montreal to Vancouver in 45 days.

This, of course, is much longer than by the Transcontinental Railway, but what is lost in time is more than made up by the decrease in the cost of freight. The saving is on the whole something like 40 p.c., while in some instances the rate has been cut in two. Although the rate so far obtained by Canadian shippers by the new route is scarcely as low as that enjoyed by shippers from Great Britain, it is certainly much more favorable than that of the all-rail routes.

There is a little hitch just at present, but which is only likely to be so temporarily, and that is the action of the railways running to Halifax and St. John. During the winter months the steamers connected with this route run from Halifax and St. John; but so far the railways have refused to give shippers by this route the benefit of the export freight rate. This is serious. But fortunately we have in Canada a Board of Railway Commissioners, and as the matter is to be brought to their attention it is to be hoped that relief will be obtained shortly.

The railway which runs across Mexico from Puerto to Salina Cruz was built by British capitalists in co-operation with the Mexican Government, and is to-day under the joint ownership of these two interests. It is believed to be the first instance on record of a partnership being formed by a government and foreign capitalists to construct and operate a railway.

The traffic of the railway last year aggregated 650,000 tons. With European and American shippers patronizing the route as they now are a very large increase may be expected this year. Seven steamship lines, one of which is Canadian, are now operating in connection with the Pacific end of the railway.

MANITOBA'S CORPORATION TAX.

The latest information from Winnepeg is to the effect that proceedings are not likely to be taken against any Extra-Provincial Corporations for failing to apply for information under the new Act. Before the law can be invoked against any offender the consent of the Attorney-General must be obtained and, in view of the general opposition to the law, it seems probable that it will be amended at the next session of the legislature.

The amendment will probably call for the licensing of outside companies on different conditions, but if preliminary steps are taken towards securing a license early in the New Year advantage can then be taken of any changes made in the law.

A COMMENDABLE WORK.

The work accomplished by the Hospital for Sick Children, Toronto, is indeed commendable. This is a provincial charitable institution which is being of much assistance to the poor people of Ontario and deserves the aid that it receives.

Last year there were 1,155 patients from all over the province and of these 65 per cent. were children of poor parents, who could not afford to pay. Since its organization the institution has treated 15,613 children, 11,550 of whom were unable to pay.

This gives a concise idea of what this large Provincial Charity is doing for the benefit of the poor.

MERCHANTS SHORTEN CREDITS.

Campbellford hardware and stove merchants have banded together to improve business conditions so far as long credits are concerned, and their example might be followed to advantage by merchants in other places, where hardwaremen have been unable to put their business upon a straight cash basis. The following announcement in their local paper explains their action:

> We, the undersigned Hardware, Stove and Tinware Merchants of Campbellford, have decided that on account of the short dates given by wholesale merchants and manufacturers, and as profits are cut so close, to reduce credits to three months, and will in future render accounts on April 1, July 1, Oct. 1, and Jan. 1, and have all accounts settled by cash or note on those dates.
>
> D. S. ARCHER, D. W. DOUGLAS,
> MORTON & OWEN, C. S. GILLESPIE,
> T. S. TAIT & SONS.

Having come together on one question there is no reason why the Campbellford hardwaremen should not form a local hardware association, and cooperate together as the merchants in Ottawa, Barrie, St. Catharines and other places have successfully done.

Modern business calls for the most complete organization if success is to be achieved, Hardware and Metal has never argued in favor of arranging price agreements on general hardware, but it advises merchants everywhere to get together frequently so that a more friendly spirit and a feeling of confidence in each other can develop, thus making it possible to arrange more modern credit terms, for early closing, and for the securing of a fair margin of profit on those lines which are the hardest to handle and most expensive to carry, yet which are usually sold with the least margin of profit or with no profit at all.

WINDOW COMPETITION.

As already announced prizes have been offered for the six best Christmas goods windows and the six best Christmas goods advertisements sent to Hardware and Metal by Canadian hardware merchants or clerks by December 31 next, the prizes being divided between cities over 10,000 population and towns of a smaller size. Three prizes in each competition go to each division.

Greater interest is taken in these competitions each year and the editor expects that the 1900 contest will be of greater interest than in previous years. For several weeks past pictures of displays have been published and three more are given this week.

CANADIAN METAL MARKETS

See Itemized Market Quotations on Page 74.

MARKETS IN BRIEF.

Montreal.

Lead, Trail.—10c higher.

Ground White Lead.—Advance of 10c.

Toronto.

Brooms. — Third advance. Now $4 dozen.

Whiting. — Advanced 10c per hundred.

Agricultural Wrenches. — Now 67½ per cent.

Green Wire Cloth.—Cut of 5c per hundred.

Manufacturing Iron and Steel. — Up 5c per hundred.

—

MONTREAL.

December 3.—Trade is somewhat quieter than it was. This is only to be expected. There is always a natural reaction after the close of navigation, but business, is steady, and of good volume.

There is a good tone to the markets. No price changes are announced excepting a stiffening in Trail lead, which for the time being is quoted at the same price as imported. The primary markets have been fluctuating, but on the whole the tone is a strong one, and this, of course, supports local markets. Inquiries are numerous, and with the knowledge that both tin and copper may be billed for a strong advance there is a keen interest taken in the progress of events. Stocks in users hands are on the light side, excepting in the case of these large consumers who bought heavily before the close of navigation. First hands report an excellent year and good forward booking for early spring delivery. Much is expected from next year's trading, and the fact that there is considerable hesitation in accepting orders beyond January and February is a very good sign.

PIG IRON—A good tone is reported, and although new business with Canadian furnaces has slackened off, old orders still make things extremely busy. Prices are well held. There is plenty of activity in finished steel lines, and the mills are booked well into next year. Pig iron business in the States has fallen off, and some cutting has made its appearance. This is not expected to last long. Steel lines are as busy as ever. Specifications are very heavy, and users are crying out for delivery. The market has asumed a quieter tone, which is thought to be a good thing for the situation generally.

TIN—No change in prices is reported locally. Orders have quieted down with the close of navigation. It is not thought that the recent advance in quotations will check buying. Stocks are low, and the metal is wanted. The English market has been fluctuating, and it is recognized that the American demand can alone save it from the dullness usually associated with December.

COPPER—Here again a falling off is noticed in orders, due to the same cause — that of the close of navigation. A very keen interest is taken in the markets, however, for the success of the talked of merger would cause some alteration in figures. It is not thought that a consolidation would do more than put copper at a slightly higher price. It is contended that the various interests, as in the case of the U. S. Steel, would put the market on a firm, rather than high, basis, and control it so there would be no fear of production swamping the demand as it has done in the past. There is no doubt that a stable market would improve trade, as it would give users confidence.

SPELTER—No change is reported in spelter or sheet zinc. Trade is not so good, but fairly satisfactory orders have been received. The English and St. Louis markets continue firm. Producers are not looking for orders, and the demand is steady, especially from the brass trade.

LEAD—While there is no change in imported lead, Trail has been marked up 10c, and is now quoted at the same price as imported. The English market, while fluctuating, does not alter much in range. A better tone is reported in the English market, where stronger buying has been in evidence.

SCRAP—No change is reported in scrap, with the exception of a stronger tone in copper and brass. We quote: Heavy copper and wire, 11c; light copper bottoms, 10c; heavy red brass, 10c; heavy yellow brass, 8c; light brass, 6¼c; tea lead, 2¼; heavy lead, 2¾c; scrap zinc, 3c; No. 1 wrought iron, 12c; machinery cast, malleable, $9; miscellaneous steel, $7.

—

TORONTO.

December 3.—A surprisingly well-sustained volume of business is passing in all the metals, but of course more especially in iron and steel. With the exception of tool steel lines, which have gone up 5c a hundred, prices remain unchanged, and the market is firm. There is some conservatism expressed regarding further advances, because to jump the figures might cause some buyers to keep out of the market except for immediate needs.

U.S. pig iron was not up to the large tonnage last week, partly because of Thanksgiving Day cutting out some business, and partly because stocks of foundry pig iron were allowed to run high. Bessemer pig for steel making, though, was as active as ever. In Canada the call was principally for foundry pig, with other metals showing a good demand.

PIG IRON—Business is excellent now, and orders show up well right up to the end of the first half of 1910. Prices have not changed. Some imported pig which was thought to be quoted too high was gradually finding its level, but the increased freight rates now that navigation has closed will tend to keep the figures where they are. Canadian foundry pig iron, No. 2, is $22; and imported lines are $21 for Clarence and Middlesboro, No. 3; $21.75 for Cleveland, No. 1; and $23 for No. 2 Summerlee. All prices f.o.b., Toronto. November trade shows up well and exceeds that of October.

COPPER—"Beating time," about explains the copper situation of the week. Everybody is waiting for the next move. The continued talk of "merger" has made speculative copper very erratic. This copper merger if it comes to a head will take in the majority of the properties in the Western States, and control 800,000,000 pounds of copper annually. Calumet and Hecla in Michigan will be left out, as also will British Columbia copper. It is the intention to make the merger world-wide, but already adverse comment has been heard in England and Germany. Local quotations remain at 14c and 14½c for casting and lake ingots.

The brass trade is consuming large quantities of copper just now..

SPELTER—This metal is steady with good business doing and developing. Foreign is at $6 per hundred, with sheets running 75c to a dollar higher. U.S. spelter remains unchanged at $8 to $8.50.

SHEETS AND PLATES—Active and heavy business is being done at present, some of the orders running over to 1910. It looks as if prices will not be much different for next year than those ruling at present, although the outlook some time ago presaged higher prices. If there is any change it will most certainly not be for lower quotations, and galvanized sheets may seek a little higher level.

LEAD—This metal is quiet locally and easy in the primary markets. The quotations remain at $3.65 for imported and $3.55 for domestic.

TIN—Just now tin is very firm and is likely to go higher. Demand is good, though there is no straining for orders. The Toronto quotation remains at 32½c. The heavy tin business in the U.S. early in the week caused a stronger feeling in London, and the market advanced sharply. The rise, however, checked business, and the situation was somewhat easier yesterday.

OLD MATERIALS—The offerings this week were freer and somewhat easier in price. Mills and foundries did less buying, however. Dealers continue to offer the same prices as a week ago: Heavy copper wire, 12c; for copper bottoms, 11c; heavy red brass, 10½c; heavy yellow brass, 8½c; light brass, 6½c; tea lead, 2½c; heavy lead, 3c; scrap zinc, 3¾c; No. 1 wrought iron, $11; machinery cast scrap, No. 1, $15 to $16; stove plate $13; malleable and steel, $8; old rubber, 9c.

HARDWARE MARKETS

MONTREAL.

December 3.—No price changes are announced this week. "Trade excellent" is the verdict all the way round, and it is only necessary to view the busy scenes in the various shipping departments to understand this. General sorting-up orders are much more in evidence than is usually the case at this time of the year, and the reason is that merchants are finding themselves short in stock, owing to the light buying in the fall. Christmas lines are also moving strongly, and repeat orders coming in show that holiday buying has already commenced in some districts.

Naturally enough, cutlery, silver and plated ware are in most prominent demand. Skates are in active request and already signs of a shortage is appearing in some sizes. Hockey sticks are also showing depletion. Booking is still quiet, and, barring a movement in green wire cloth and screen doors, very little is doing.

BUILDERS' HARDWARE — General lines are still in good demand, and sorting-up orders in lock sets, escutcheons, bolts and butts are reported. The market is firm, and delivery from makers much better than it was. We quote: Lock sets (inside) $4 per doz. and up; lock sets (outside) $13.20 and up; common rim locks, $1.10 per doz.; porcelain knobs, $1.10 per doz.; sash cords, 32½c to 33c.

WINTER LINES—Very little improvement is shown in booking, green wire cloth and screen doors being the principal movers. It is not anticipted that the recent advance will affect the demand at all. Sleigh heaters, sleigh bells, weather strip, and horse blankets are moving well in a sorting-up way. Enamelware is showing up well, and so are kitchen utilities, such as food choppers, bread makers, cake mixers; washing machines and wringers.

CUTLERY AND SILVERWARE —There is no mistaking the holiday tone to trade. Carvers in cases, display cases of table cutlery, coffee spoons, berry spoons, pickle frames, chafing dishes, tea and coffee pots, and cut glass are all in active demand. Razors, safety and otherwise, are moving splendidly, and manicure sets are also prominent. Altogether, trade is very satisfactory.

SPORTING GOODS—The strong movement in skates continues, and already a shortage in some sizes is foreshadowed. Hockey sticks and pucks are also moving well. Snowshoes, toboggans and sleds are prominent. There is a good movement in exercisers, and other home developers. Indian clubs and dumbells are also in active request.

MINERS' SUPPLIES—There is a fair movement to miners' supplies, but the market is without character. We quote: Miners' picks, 16½c a pound; prospectors' hammers, 16½c; pick handles, $1.85 a dozen; drilling hammers, 6c a pound; crowbars, 3½c; drill steel, 8c.

BOLTS AND NUTS—The market continues very firm, under an active demand. No changes are reported, and we quote: Discounts on carriage bolts, ⅜ and smaller, 70; machine bolts, ⅜ and less, 60, 10 and 10; coach screws, 75; stove bolts, 80 and 7½.

NAILS—The situation is unchanged. Buying is good, but there has been a falling off now that inland navigation is closed. We quote:—Wire nails, $2.25; cut nails, $2.40.

LUMBERMEN'S SUPPLIES — Very good buying is reported, and with lumbering operations on a more extensive scale than last season, good trade seems assured. No change is reported in prices, and we quote:—Cant hooks, $12 a dozen and up; axes, $6.50 a dozen and up; axe handles, $1.15 and up; cross-cut saws (inferior) 25c per foot and up; better grades, 43c per foot and up; axe wedges, 25c a dozen and up.

SHOVELS—Snow shovels continue to move well, but other lines are quiet. We quote: First and second grades of spades, 60 and 2½; 3rd and 4th, 50 and 2½; scoops, 1st and 2nd grades, 60 and 5; 3rd and 4th, 45 and 5.

WIRE—There is very little doing just at present in wire. Some booking is noticed in poultry netting. We quote: Barb wire, car lots, mixed, $2.50; small lots, $2.55; plain twist, car lots, $2.80; small, $2.85. Galvanized wire, No. 9, $2.25 in straight and mixed car lots, and $2.30 small lots, f.o.b., Montreal. Coiled spring fencing, $2.30; straight and mixed car lots, and $2.35 small lots. Plain wire, bright, annealed and annealed and oiled, $2.35 base. Staples, bright, $2.60; galvanized, $2.85.

TORONTO.

December 3.—Except that business continues at better volume and there are a couple of minor price changes, conditions in the hardware trade remain the same as last week.

Christmas goods are the principal line of the week, and they are moving excellently now. Quite a variety of toys, novelties, cutlery, etc., are going out for the holiday season, and a great many of the orders received call for a high grade of staple lines, evidently for the same seasonable selling. Builders' hardware demands are almost as pressing as ever, and the buying of skates has depleted stocks in some jobbers' hands to a very appreciable extent.

Following the changes in the eastern markets, agricultural wrenches advanced in Toronto last Saturday and are now quoted at 67½ per cent. discount from list. Green wire cloth underwent a cut of 5c on the same day, the present prices being now $1.65 per 100 feet.

BUILDERS' HARDWARE — There is just the slightest perceptible let-up this week in this line. New orders are not so heavy and existing orders are being filled more rapidly, thus allowing shipments to go out in better time than at any part of the season so far. Many of the order files, however, are yet loaded up, but with clear sailing ahead the trade should be abreast of their business before the holiday rush comes. Prices are unchanged, and the market is decidedly firm.

WINTER LINES—Snow shovels in large orders have been shipped from Toronto in all directions to provincial points during the past ten days. Booking of poultry netting, rubber hose, wire cloth, screens, etc., continues, though the size of the orders is small compared with what was done during November. The cut of 5c on green wire cloth was provocative of some business, though not much. Ice scrapers are moving fairly well only. Some agricultural tools are yet moving, but the end for this season seems to be in sight. Agricultural wrenches are firm at the advanced price of last Saturday, and on other seasonable lines the market is strong.

HEATING AND LIGHTING GOODS—There is nothing particular to chronicle in this class of goods for the week, if exception is made to the fancy lamps going out in better number for the holiday trade. These latter are of superior quality, indicating a better feeling for quality goods this Christmas. General business is steady and good, with the market unchanged.

HOUSEHOLD GOODS—Washing machines, wringers, brooms, sweepers, brushes, mops, irons and enamelware are good sellers just now. Brooms have made their third advance since the opening of the season, and are now $4 per dozen for the kind that sold for $2.10 at the commencement of August. Scarcity of broom corn is attributed for the higher prices. Kitchenware and tin goods are active. Preparation for the holiday season is the lever which is moving household goods.

SPORTING GOODS—A great scarcity of skates is reported by some jobbing houses. The statement is made that while skate booking in the early summer was satisfactory, quite a number of hardwaremen held off buying until the first touch of winter. Last week quite a number of good skate orders were placed by local hardwaremen, and some who had booked came again into the field for a sufficient number to look after the stocking-up orders. Hockey sticks and toboggans are going well, and in sleds a big trade is being done. Gymnastic exercisers, too, are selling well.

CHRISTMAS GOODS—The season for these goods is now here in full blast, and hardwaremen and jobbers say they expect a fine selling season. Iron toys are going out more plentifully than for some seasons, and sleds and dolls' carriages, too, are almost equally as active. Dolls and lamp goods are responsible for some heavy orders. Cutlery is a foremost line, penknives, particularly, opening up well this week. Silver and plated fare are fair sellers, and inquiry is being made for cut glass and beaten brass goods. Dinner bells in fancy sets and single styles are moving fairly well. A lot of sporting goods are being sold for the Christmas season's selling.

CANADIAN METAL NOTES.

During the four years, 1905-1908, British Columbia produced 199,923,356 pounds of lead, valued at $8,990,857.

A new iron mine at Spalding, in the Lake Megantic region of Quebec, is said to be yielding 68 per cent, of fine iron.

The Nova Scotia Steel & Coal Co. has struck a 30-foot seam of iron ore on their Wabana property in Newfoundland.

The Dominion Iron & Steel Co. will have built for next season two 10,000-ton steamers for carrying ore from their iron deposits at Wabana, Nfld., to Sydney.

The Hydro-Electric Power Commission of Ontario has placed an order for 1,500,000 pounds of half-inch aluminum wire, at a cost of $400,000, with the Pittsburg offices of the Aluminum Company of America.

At a meeting of the directors of the Nova Scotia Steel & Coal Company, held in Montreal last week, it was decided that as the profit and loss account on Dec. 31, 1908, showed a balance of $1,219,221 of accumulated profits, a stock bonus or dividend of 20 p.c. to common shareholders be recommended. Each shareholder will receive one share of common stock for every five shares now held by him. It was also resolved to pay a cash dividend of 1 per cent. on the common stock of the company. It was stated that business for 1909 has been fairly good, and notwithstanding the depression which has existed, the profits will exceed those of last year by at least $100,000.

TRADE WITH AUSTRALIA.

James Pender, of James Pender & Co., St. John, N.B., who was the representative of the St. John Board of Trade at the recent congress of the Chambers of Commerce of the Empire at Sydney, Australia, has been stopping in Montreal on his way home. Mr. Pender states that Imperial preference had made rapid progress in the minds of the people from all sections of the British Empire. At Sydney the idea of preferential trade within the Empire was carried by decisive majorities. There were ten delegates from Canada and they voted as one man for Imperial preference.

In regard to the prospects of additional trade between Canada and Australia, two things were necessary to extend the business. In the first place, it would be necessary to have an intercolonial arrangement and then the freight or transportation would have to be taken up. A line of steamers would have to be established between the Atlantic ports of Canada and the distant Commonwealth before much could be done in improving the trade relations between the two countries. We cannot ship via New York as the American steamship companies discriminate against Canada every time and this is a factor which cannot be lost sight of in working up trade between nations or colonies. Already Mr. Pender said, the Massey-Harris Company have captured the Australian market for their particular line of goods and what they have done can be accomplished by others in different lines.

Mr. Pender visited several points in western Canada and told Hardware and Metal that prosperity was evident everywhere.

HAVE A PLAN TO FOLLOW.

The man who is satisfied with what comes to him unsolicited answers few knocks at the door. The stay-at-home misses daily opportunities that pass at the next corner.

Get away from the desk—get out of the chair-tilting class. Opportunities are in perpetual motion. Get after them. Don't let custom dictate the boundaries of your business—don't let convention hold you down.

Lay out a plan, a campaign for new business—then go after it. Exhaust every source, swing every prospect into line. Don't be satisfied with the business that you have—get more.—*System.*

HARDWARE TRADE GOSSIP

Ontario.

Wright & Allen's hardware store, at Aylmer, has been improved by a new store front.

John Maker, tinsmith and stove dealer at London, sustained a small loss through fire in his premises last week.

Kentnor & Tuck, hardwaremen, Burlington, have dissolved partnership. The busines will be continued by John Kentnor.

D. A. Moore has sold his hardware business at Oakville to Anderson Bros., and stock is being taken now preparatory to the change.

Joseph Woodsworth, for many years a retail hardware merchant in Toronto, has returned from a five months' trip to the United Kingdom and the Continent.

The death occurred at Martintown, last week, of A. J. McGregor, father of Arch. McGregor, traveler for Lewis Bros., Montreal, in northern Ontario.

F. B. Hudson, formerly with the Hudson Hardware Co., Belleville, has removed to Hamilton, where he and his father-in-law have secured the controlling interest in the Commercial Oil Co.

Frank Child, hardware merchant, at Matheson and Cochrane, had the misfortune to break his leg last week. His brother, Charles Child, plumbers' supply man, Toronto, has gone north to assist while Frank is laid up.

J. H. Kerswill, who has been representing Frothingham & Workman, of Montreal, in western Ontario for several months, has taken over the ground covered by J. A. Fraser, now traveling for the Alexander Hardware Co., Hamilton.

T. J. Johnston, for over a quarter of a century, manager of the lead and paint works for the James Robertson Co., Toronto, underwent a serious operation last Monday and will take an extended rest before returning to work again.

F. A. Fisher, manager of the Enterprise Foundry Co., Sackville, N. S., spent a few days in Toronto this week with L. N. Stewart, Ontario sales representative of his company. Mr. Fisher will visit Detroit and other cities before returning east.

The premises at No. 20 Temperance street, Toronto, have been sold to Paton Bros., dealers in paints and oils, for a new warehouse. The price paid for this building was $25,000. The purchasers will occupy their new premises about February, 1910.

Armon D. Sinclair, accountant and salesman in the Moir hardware establishment, Arnprior, has gone to Orillia where he assumes the duties of an important office with the Orillia Hardware Co. Before leaving Arnprior, Mr. Sinclair was presented with two addresses and two souvenirs.

Quebec.

H. Pitts, Cornwall, Ont., has been on a visit to Montreal.

E. Caron, Chambly Basin, Que., has been a buyer of hardware in Montreal.

Mr. and Mrs. W. A. Mitchell, of Kingston, have been on a visit to Montreal.

G. Parent, of Pointe Claire, has been a caller on the Montreal hardware trade.

C. A. Connor, of J. H. Connor & Son, Ottawa, has been stopping in Montreal.

J. A. Paquin, St. Eustache, Que., has been calling on the hardware trade in Montreal.

J. A. Dansereau, hardwareman and dealer in shoes, Montreal, has filed a consent of assignment.

A. R. Hart, representing Lewis Bros., Montreal, in Calgary, is making his annual visit to headquarters.

D. Roskam, of the Ever-Ready Safety Company, Montreal, has returned from a trip to the Pacific coast.

D. G. Smith, president of the Smith Hardware Co., Montreal, has returned from a trip to the Pacific and western points.

A. E. Peters, president of the Record Foundry Co., of Montreal, and Moncton, is on a visit to Montreal headquarters.

J. B. Macdonald, of Macdonald & Co., Halifax, N.S., plumbers, steamfitters and machinists, has been on a visit to Montreal.

J. F. Themens is now representing Frothingham & Workman, Montreal, in Quebec, along the north shore, in the place of A. I. Vallerand.

James W. Lee, for many years with the Canada Paint Co., Montreal, has, in addition to ranching in the Northwest, opened a general store at Langley Prairie, B.C.

N. G. Neill, who has been appointed industrial commissioner for Port Arthur, received a cabinet of cutlery from the staff of the Caledonian Iron Works, Montreal, having been with this firm for 15 years.

W. H. Gerke, manager of the Martin-Senour Company, Montreal, has returned from a trip to Halifax, N. S., after attending to the taking over of the Maritime Paint and Varnish Co., Halifax, which will now be conducted as a branch of the Montreal office.

Edward Rodgers, who was with the Pillow-Hersey Co., Montreal, for forty-four years, died recently. The Pillow-Hersey Co., was incorporated with the Montreal Rolling Mills. On retiring from the company, Mr. Rodgers was presented by the employes with a gold watch, and by the head of the firm with a gold chain, as a souvenir of his long service.

G. J. Rogers, traveler for the Jas. Robertson Co., Montreal, died suddenly at the Queen's Hotel, Megantic, on last week, from heart failure, following an acute attack of indigestion. Mr. Rogers had been with the James Robertson Co. not quite two years, previously to that being with the Syracuse Smelting Works, Montreal, and he was traveling in smelting, babbit and type metal.

Extensive improvements have been made to the offices and plant of the James Robertson Co., Montreal, since the fire which practically gutted the place some months back. A handsome entrance now leads to the offices, which are on the first floor, instead of on the ground floor, as in the old structure, and are most conveniently arranged. The assembling rooms and shipping offices are now on the ground floor. In fact, the whole place has practically been rebuilt, and made, as far as possible, fireproof, with solid brick walls and fireproof doors between each building. The smelting of lead and brass has been removed across the road to a new building, thus doing away with the risk of fire to the main plant. The plumbing supply department will remain for the present in the biulding in Rocollet Street, which was taken for the purpose immediately after the fire. The whole plant is now running again, including the sheet lead mill.

Maritime Provinces.

S. A. Crowell & Co., hardware merchants, Yarmouth, N.S., have been registered.

Z. R. Everett, who at one time conducted for many years an extensive hardware business at Fredericton, died at Verdun (Montreal) last week.

H. F. Cohoon, who was partner with Bent & Cohoon, New Glasgow and North Sydney, for 24 years, has taken over the North Sydney branch and will continue the hardware business under the old firm name, Mr. Bent taking over the store at New Glasgow.

Western Canada.

The Safe Lock Fence Co., of Owen Sound, Ont., is to establish a warehouse in Brandon.

T. S. Rank, Oxford, Assa., is instaling a new heating plant in his hardware store. He has moved into his new tinshop.

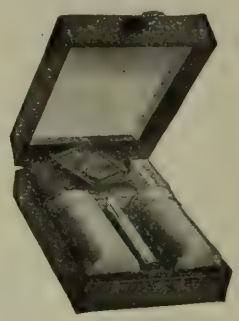
J. Nicoll and F. E. Duxbury are opening a hardware store at Battleford.

A. W. Coulter, formerly a hardware merchant at Dryden, Ont., is opening a hardware and furniture store at Creston, Kootenay Valley, B. C. Mr. Coulter writes: "I find Hardware and Metal a very valuable paper."

HIGH PRICES FOR BROOMS.

Judging from reports there is a likelihood of broom prices soaring higher than for some years past, and there is a probability that after the New Year even the present high prices may be increased, owing to the great scarcity this season of broom corn.

O. A. Manchee, of H. W. Nelson & Co., Toronto, has just returned from a trip through the broom corn section in the Western States, and reports that there is more truth in the short crop reports than many manufacturers care to admit. Localities that have always had an abundant stock of corn on hand at this time of the year are cleaned out completely, and just where the corn is coming from to keep the factories going is a hard problem to solve.



"These conditions," he says "are bound to keep the heretofore common household article up in the fancy figures, with no possible chance of any decline. In fact it is more than likely still higher prices will have to be paid before the New Year is very far advanced."

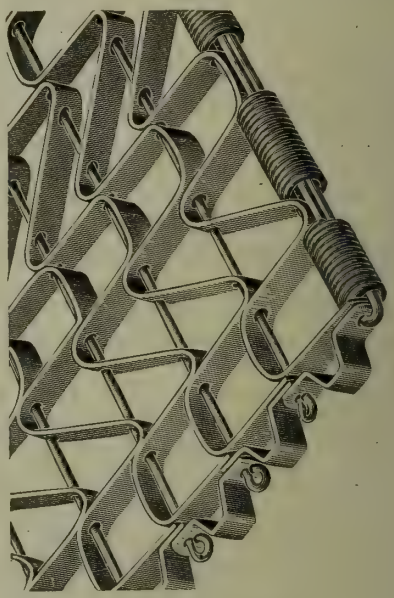
Not since 1868 has there been such a scarcity of corn. At that time broom corn brought from $400 to $500 a ton. The price in an ordinary year is about $80 per ton; this year the price has already gone to $260, which is about $50 higher than last year. The wholesale price of brooms, since the beginning of September, has jumped from $2.10 to $4.00 per dozen for the cheaper grades, and from that up to $8 is the price asked for better qualities. This would make the retail price about 40 cents for the ordinary 25-cent broom. Relief is not expected before September next, when the new broom corn is harvested

NOVELTIES AND NEW GOODS

AUTO-STROP SHAVING SETS.

The Auto-Strop Safety Razor Co., Montreal, have increased the selling power of their razor by marketing in handsome boxes of a useful size

"Kit" Auto-Strop Set.



holding a complete shaving outfit. These boxes make most acceptable presents, and the range of values being a good one, a hardware merchant can increase the selling force of his stock by having the full set. There are four sets of boxes, the Standard (the old set), and the Travelers, the Tourist and the Kit. The fitting and completeness of the boxes increase with the price, the Kit—the edition de luxe—comprising silver plated razor, rubber set brush, and soap in silver plated tubes, case of one dozen razor blades, strop, and best English silvered mirror. The boxes are of black morocco, with a strong clasp.

NEW FENCE TOOL.

The Smith Hardware Co., Montreal, are introducing upon the Canadian market a new fence tool—the 1900 staple puller. It is an extremehandly tool embodying all the improvements that can be suggested, and should prove a good seller for the hardwareman. One of the principal features of the tool is the hammer swing given to it by the handles having a well-balanced grip and with the head weighty, a perfect driving tool is obtained, thus combining a hammer with a wire cutter and staple puller. Another important point is that the wire cutting parts are so constructed that no adjustment is required for cutting various sized wire. Only one action is necessary to cut anything. This means a great saving of time. By using the interior part of the head staples bent in pulling can be straightened for using again, while tie wires can be easily spliced. The two sides of the puller are used for barbed wire and the centre for poultry netting and wire fence. The article is made of high grade tool steel drop forged, and is warranted by the manufactureers.

ACME WIRE MAT.

The Acme Steel Goods Co., 2834 Archer Ave., Chicago, have recently made several improvements in their "Acme" mat, which will make it more popular than ever. The weak point in most steel mats is that the edge frequently breaks under hard usage. In the "Acme" this has been overcome by the adoption of a guarded edge, which, they claim, makes the mat indestructible, without impairing its attractiveness. The edge is so placed that heavy wear has little effect upon it, and the mat is as flexible as before. As in the past, the "Acme" mat is thoroughly galvanized and

Acme Steel Wire Mat.

made of the best strip steel, three-eighths of an inch in depth.

STEEL RAIL TRADE.

A compilation of rail orders booked to November 1, for the U. S. and Canada since the beginning of 1909, shows a total of 2,600,000 tons, of which 1,800,000 tons are this year's rolling. Next year the tonnage, it is estimated, will go over the 3,000,000 mark—not a record, as 1906 went 4,000,000 tons. Car buying since the opening of November has aggregated 17,000 cars and 120 locomotives for the two countries; and orders for bridgebuilding material mounts up to 100,000 tons.

Trade News from the Atlantic to the Pacific

St. John Firm May Establish Foundry at Fort William—Brantford gets New Industry—Alberta to Have New University—British Columbia Firms Amalgamate—Brantford Stove Firm Retiring From Retail Business.

ST. JOHN.

December 1.—The energies of all the retail hardware dealers here now are bent toward making an attractive display of holiday goods and some novel window trims are planned for the next few weeks. The dealers report that there is a tendency towards firmer prices, especially in metals where the basic principle is iron.

J. W. McAvity, of the McLean Holt Company, of this city, manufacturers and dealers in stoves, ranges and metal castings, has been in Fort William (Ont.), looking over the ground with the intention of establishing a foundry there, providing satisfactory arrangements can be made with the city.

A. E. Jubien, who has been secretary of the Enterprise Foundry Co. for a number of years, has severed his connection with that firm to enter business as manufacturers' agent. Previous to joining the Enterprise Foundry Co., Mr. Jubien was with the Sydney Cement Co., Sydney, and both firms speak in the highest terms as to his ability and integrity.

W. S. H.

HALIFAX.

November 30.—Trade is slackening up in most lines of hardware now, all the orders for the season having been filled and shipped. The season was a very good one, considering the high prices asked for most lines. Jobbers report quite an improvement in collections, they being ahead of those for the same period of last year.

Prices in all lines are firm, and in some they show an advance. White lead is 10c per 100 lbs. higher, and cotton lines and twines have been advanced 1c per lb. Ingot tin, pig lead, spelter and wire nails are all very firm.

The construction work of the new steel-casting plant at the Londonderry Iron Works is nearing completion, and it is expected that it will be in operation before the end of the year. The open-hearth furnace is practically completed, also the coke ovens. After the instalation of a sand-mixer, a traveling crane, a metal saw, and some other machinery, the work of casting will commence. The plant will use oil in place of coal for fuel.

G. S. Dorman, who was for many years foreman of the plumbing and steamfitting department of Bruce, Stewart & Co., Charlottetown, has left for Moncton, where he will reside in future. Previous to his departure he was presented with a handsome gold chain.

Alexander Sterling, who was for many years in the employ of the hardware firm of A. M. Bell, has left for Winnipeg, where he has accepted a position with the Miller & Morse Co. Previous to his departure he was presented by the Millbank Club with a handsome fountain pen, finished in gold, appropriately engraved, and an address conveying the good wishes of his clubmates.

George Morash, a highly esteemed employe of the Canada General Electric Co., Ltd., of this city, has been transferred to a more important position in the Vancouver branch of the same company. Mr. Morash, accompanied by his wife, will leave for the Pacific city this week.

J. H.

KINGSTON.

December 1.—Robert F. and John Elliott, hardwaremen, received word of the death of their brother, William Elliott, in California. Deceased died suddenly of heart failure. He was well known here, having served his apprenticeship in Chown & Cunningham's foundry, and when this company ceased business, removed to California.

The Frontenac Lead Mining Company has met with further success. Several moneyed men of the States have advanced $125,000 in bonds, which insures a capital of $165,000 to begin with, since $40,000 was paid in as stock.

E. G. B.

TORONTO.

December 1.—M. Matthews, who travels for the Canada Metal Co., Toronto, was the only representative of the hardware or metal trades who was nominated for election to the Toronto Board of Directors in the Commercial Travelers Association. This is the first time "Mike" has run for office, and his friends hope to see him elected.

S. F. Bowser & Co., Toronto, have installed a Bowser dry cleaning system in the Parker Dye Works, a ventilating system being included to carry off the fumes arising from the use of gasolene in cleaning garments, etc.

W. W.

M. MATTHEWS, TORONTO.

Canada Metal Co. Salesman who is a Candidate for Election to Toronto Board of Travelers Association.

CHATHAM.

November 30.—The question as to whether or not Chatham manufacturers can be compelled to take their water by meter was settled before Justice Clute at the non-jury sittings of the High Court, this afternoon, when His Lordship handed down judgment, dismissing the action of W. A. Hadley and the Hadley Lumber Co. against Mayor W. H. Westman, chairman of the water commission, and his colleague, Commissioner Stewart Lamont. Some 18 years ago when the waterworks plant was owned by a private company, which shortly after sold to the city, the Hadleys were given a flat rate of $65 a year for their factory. Last spring, on becoming chairman of the water board, Mr. Westman, who is a member of the hardware firm of Westman Bros., brought in a by-law requiring all manufacturers, hotel keepers and liverymen to put

their services on meters. For the purposes of a test case, the Hadleys who refused to put on a meter brought action to restrain the two commissioners from shutting off their water, claiming that they had a right in perpetuity to receive all the water their factory might require in return for $65 per annum, anl also challenging the qualifications of the commissioners. Justice Clute finds in favor of the defendants, with costs. One of the allegations against Westman was that, being a member of the firm of Westman Bros., who held a plumbers' license, the issuing of which is in the hands of the water board, he was thereby debarred from acting on the board. Had this contention been sustained it would have meant that no plumber could be elected mayor of a city where a water board is in existence, the mayor being ex officio a member of the board.

Arrangements are well under way for the formation of a company which will manufacture stoves in Chatham. The company will be capitalized at $40,000, with $25,000 paid up capital. The larger share of the stock is being put up by Chatham capitalists. An experienced stove manufacturer from out of the city will be engaged to manage the plant. Tax exemption will probably be asked from the city. The company will at first undertake only the manufacture of a steel range suitable for coal and wood, patent rights for this having been secured. The foundry will be built on a fairly large scale with a moulding shop attached. W. E. P.

BRANTFORD.

November 30.—The Waterous Engine Works Company announced that the Seagrave Fire Appliance Mfg. Co., Walkerville, will move to this city, occupying the premises now occupied by the Waterous Wire Nail Works, who will secure a new site for their buildings.

Additions, to cost probably $50,000, will be erected to Ryerson and King Edward schools.

The Brandon Shoe Co. will erect a factory 40 x 120 feet, two storeys high.

E. B. Crompton will open a departmental store here next spring, but will not include hardware in their stock.

The separate school board has decided to erect a new separate school to cost about $25,000.

S. G. Read, real estate agent, has decided to erect an addition to his present premises on Colborne, to consist of an addition 42 ft. by 20 ft., two storeys.

Leonard F. Bishop, of Bishop & Son, hardware dealers, has passed his examinations at the Toronto School of Cavalry, and is now a qualified lieutenant in the 25th Brant Dragoon Regiment.

J. E. Weston, Tillsonburg, is having a five days' sale of stoves and tinware.

The Sanderson-Harold Co., Paris, commenced work in their new factory last week.

After having been in the retail stove, tinware and hardware business for a period of five years, the Telephone City Stores announce that they intend closing out their retail store on Colborne street, restricting themselves to the manufacture of stoves and the wholesale trade. They will hold a closing out sale during December and January, for which they are already making preparations.

A. W.

CALGARY.

November 26.—J. H. Ashdown, of the Ashdown Hardware Co., Winnipeg, is in the city on a business trip.

The Canadian Bank of Commerce through Tool, Peet & Co. have purchased two lots in East Calgary, on which a new building will be erected on the new property.

The most important meeting that has ever been held by the Senate of the University of Alberta was held in Strathcona on Friday. Plans for the new university have been accepted by the Senate, these providing for a building 230 x 72 feet in size, with wings to the north and south ends 110 x 38 feet. Provision was made for a library to accommodate from 15,000 to 20,000 volumes. It is estimated that the building will not be completed inside of three years, and its cost is estimated at approximately $500,000.

J. J. Walsh, of the Standard of Empire, is paying Calgary a visit on his return from the coast. Mr. Walsh says he finds the west more prosperous every trip he makes. This season is the climax, but he anticipates that on his next trip there will be just as much change in the growing west as there has been previously.

M. G.

VICTORIA.

November 27.—The two largest firms at Duncans, B.C., are to be united into a joint stock company. The firms affected are those of W. P. Jaynes, the oldest established business in the district, and Pitt & Peterson, established over eleven years ago. Plans have been drawn up for a new brick block, 100 x 60 and two storeys in height, for the new firm. The store will have the following departments: Groceries, dry goods, boots and shoes, and a full line of general hardware.

The Times Printing Company are calling for tenders for a new office building.

The tender of the Cobbert Heating and Plumbing Co. for twenty tons of pig lead at $3.59 per 100 lbs. was accepted by the city council.

W. B. C.

HARDWARE LETTER BOX

Any question on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

Kidd & Clements, Wapella, Sask., ask if there is a satisfactory chemical soot destroyer on the market.

We have been unable to learn of one, and experts say chimneys must be cleaned in the old-fastioned way. To overcome gathering of soot in furnaces, the only practical method is to adopt means to increase combustion. The use of a chemical would damage the furnace.—Editor.

WOOD ASHES—Regarding the recent inquiry as to purchasers of wood ashes, Hardware and Metal learns that ashes are bought by P. Wilson, ash buyer, Lindsay, the maerial being shipped to California for use as fertilizer.—Editor.

Extension Ladders. — H. Gilles, St. Jacobs, Ont., writes: "Where can I buy good quality extension ladders for use in eavetroughing. I want two of 16 feet and two of 18 feet.

Berlin Woodenware Co., Berlin, and Stratford Mfg. Co., Stratford. —Editor.

A GOOD SALES IDEA.

A good crowd-pulling sales plan was recently used by a western retailer, who gave with each 15-cent purchase a ticket. He advertised that the pony would be given away at five o'clock, on December 24, to the girl or boy holding the greatest number of tickets. The pony was put on exhibition in the sporting goods and toy department, and this plan induced the children's parents and friends to trade at the store to please the little folks, and help them to win the much-desired prize.

Condensed or "Want" Advertisements

Those who wish to sell or buy businesses or stocks, obtain competent help, connect with satisfactory positions or secure aid in starting new enterprises should not fail to use the Want Ad. Advertisement page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere who is looking for just such a proposition as you have to offer.

AGENCIES WANTED

GOOD line of hardware wanted on commission for city and country. To commence January 1st. Apply Box 925, HARDWARE AND METAL, Toronto. (49)

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

ENGLISH firm manufacturing full line of paints, dry colors, varnishes, etc., desire to secure Canadian agent who has good connection with the Canadian hardware trade. Having direct steamer connection with Montreal, long experience in manufacturing, up-to-date plant and equipment and large output, we believe good live Canadian agent could build up good business for us. HARDWARE traveler with an A1 connection is open for an engagement January 1st, 1910. Twelve years experience in the Ottawa Valley. Communications strictly confidential. Address Box 914, HARDWARE AND METAL, Toronto. (48)

WANTED—Situation as hardware salesman. Fifteen years' experience. Could take position at once. Apply Box 928, HARDWARE AND METAL, Toronto. (49)

Business Men and the Proposed Exposition at Winnipeg

Written for Hardware and Metal by George M. Hall.

A great International Exposition is proposed for Canada—to be held in Winnipeg in 1912—and the business men of the country are asking: "Will it pay? Will it be good for business before the event, while it is in progress, and after it is over?"

All business men are interested in this phase of the Exposition idea and no one branch of business has a greater interest than the hardware and metal men. If the Exposition goes forward to consummation and success—as it seems likely to—there is no doubt that the hardware and metal business will be affected and the question is whether the effect of such a project as this will be beneficial or otherwise.

It deserves to be said in this respect, that one of the most convining arguments in favor of the Exposition as a purely business project, is found in the personnel of the committee of forty-one business men which has the work of organization in hand. These men are proceeding on the conviction that the exposition will be a good thing for business in Winnipeg, in Manitoba and in all Canada. Perhaps they the wrong, but they sincerely believe they are right.

These men have come to their belief after personally looking the Exposition ground over and patiently enquiring into the effect of other similiar enterprises—the St. Louis, Portland and Seattle fairs, among others, affording examples of the application of the Exposition idea in communities of approximate condition to Winnipeg. Information gathered from these sources is wholly to the effect that the cities in which the fairs named were held were very greatly benefited by this means. Dealing generally with the subject—upon inquiry—the business men of St. Louis, Portland and Seattle have told the Winnipeg committee that, beyond any doubt whatever, the expositions that were held in their cities were very beneficial to business of all sorts, more especially the lines connected with the sale of lands, buildings and all lines that draw sustenance from community growth. Railroad men also tell of increased immigration resulting from these expositions.

Already the exposition idea is reputed to be responsible for some of the remarkable growth that has taken place in Winnipeg this year and further development of the same character—real estate and building—that is planned for next year. New buildings to the value of more than $9,000,000 have been erected in Winnipeg or will have been before the close of the year. Twenty thousand tons of structural steel has been used in Winnipeg and it is reported that Winnipeg architects have already received commissions for no less than $7,000,000 worth of plans, already, for next year's building. This is a very respectable showing for one city of the west, but there is no doubt that these figures will be increased when it is definitely known that the Dominion government is to endorse the Exposition project.

It is estimated that it will require $8,000,000 to equip the Exposition alone. Buildings are to be erected by various provinces, and France, Germany, Austria and Switzerland have already opened negotiations for space, while the United States will also participate, because of the heavy trade interests of that country in western Canada. The Mother Country will undoubtedly attend the coming out of the Elder Sister, and it is certain that the amount expended by all the participants in Canada's first exposition will be very large. It is also certain that a very large part of it will be expended in buildings, some of which will be permanent structures, it being a part of the plans of the exposition committee to unite with the province in erecting permanent university buildings, or with the City of Winnipeg in erecting permanent exhibition buildings. In either case, the outlay for buildings is sure to be large and result in increased activity in hardware and metal lines of trade.

Winnipeg's Hardware Turnover.

With the remarkable activity in building that has marked Winnipeg business this year, the movement in all lines of hardware has been heavily increased. The manager of one of Winnipeg's largest wholesale hardware houses places the annual hardware turnover of the city at from $12,000,000 to $15,000,000 and says that the larger amount is not too large, if all special lines of hardware trade are included. In all lines of hardware demand, this sum is likely to be nearly or quite doubled for each of the two years that will elapse between the time that the actual operations in exposition work may begin—as soon as the approval of the Dominion government is assured—and the opening of the Exposition in 1912. In spite of the heavy building operations that have taken place in Winnipeg during the past six years—when more than $50,000,000 worth of new buildings have been erected—the supply of housing accommodation for business and domestic purposes does not meet the demand and a very large amount of extra work must be done to accommodate the thousands of people who will attend the exposition in Winnipeg. It will take several thousand new structures, hotels ,dwellings, apartment blocks, stores and the like, to furnish housing and business facilities for the increase of population resulting from exposition attendance.

Very nearly 4,000,000 persons attended the Seattle fair, mostly from places at a distance from Seattle. Reasonable expectation for Winnipeg—in like circumstances and with a more favorable location in relation as regards means to population—should give an attendance of eight millions, at least, at Canada's exposition. Not only must all of those who come from a distance be housed in Winnipeg while they are there but they will be induced by particularly low railway rates to travel all over western Canada, and such conditions cannot fail in making very great increases in building operations all over the west. Activity in building operations is inseparable from activity in hardware and metal lines of trade, and the exposition argument appears to strongly point the moral of good hardware and metal business.

OFFICE ECONOMY.

Employees should be more economical of office stationery and supplies. Everything costs money. Take printed postals, for instance. They cost a cent apiece to begin with; then the printing on them is so much extra. They are scattered around the office, on the desks; occasionally one rests on the floor. Then with letter-heads—regardless of the quality of paper and cost of printing—for a bit of memo, telephone message or something of the sort you grab up a letter-head, scribble or typewrite a line or so for temporary memo, then throw the sheet away. The conscientious clerk would not think of taking a one-cent stamp belonging to the employer, but will waste stationery and supplies. Be consistent and economical.

CORRUGATED IRON

We make it—either painted or galvanized—in 3, 4, 6, 8, 10 foot lengths. In 27½ inch or 33 inch widths. . . . . .

Metal Siding and Shingles

Galvanized or painted, all weights.

Western Canada Hardware Market Situation

Our Western Correspondent Reviews the Market Outlook — Hardware Quotations Corrected by Telegraph From Hardware and Metal's Winnipeg Office up to Noon on Friday.

Wholesalers report the trade rather quiet just now, with frequent light orders for specialties and seasonable goods. The heating trade was very heavy up until recently, and it is evident that the trade is quite well supplied. Christmas lines and winter goods are the heaviest selling at present. Cutlery is having a good run, and local stores are well stocked with very attractive lines. Travelers report that these lines have been stocked heavily all over the west and the trade in all holiday goods, including plated ware, etc., promises to be excellent.

Lumbermen's supplies, such as axes, axe handles, saws, chains and files, are going out well, and retailers last week sold quite a large quantity of these supplies. Weather strip, which we quote this week, has a splendid demand, and prices are firm.

Winnipeg Quotations.

WIRE—Barbed wire, 100 lbs., $3.15; plain twist, $3.40; staples, $2.90; annealed wire $2.85 base; oiled, 10c extra; bright iron, $3.15 base; brass spring wire, 29c base, plain galvanized wire, 6, 7 and 8, $3.50; No. 9, $3.10; No. 10, $3.60; No. 11, $3.70; No. 12 $3.30; No. 13, $3.40; No. 14, $4.25; No. 15, $4.75; No. 16, $5.

AUGUR BITS — "Irwin" bits 47½; other lines, 75 per cent.

BLOCKS—Steel, 45; wood, 60 per cent.

HINGES—Light T and strap, 65 per cent.

HOOKS — Brush, heavy, per dozen, $8.75; grass, $1.70.

FILES — American, 75; Black Diamond, 60; Nicholson's, 65 per cent.

STOVE PIPES—6-inch, $8.69; 7-inch, $9.31.

TINWARE, Etc. — Pressed, retinned and plain, 75 and 2½; pieced 30; japaned ware, 35; Famous enamelled ware, 50; Imperial, 60, one coat, 60; Premier, 50; Colonial, 60; Royal 60; Victoria, 45; White, 70 and 5; Diamond, 50; Granite, 60 per cent.

IRON WASHERS—Full box, 45 per cent.; smaller lots, 40 per cent.

GALVANIZED WARE—Pails, 40 and 5 per cent. Other galvanized lines, 37½ per cent.

LOGGING CHAINS—5-16, $5.50; ⅜, $5; 7-16, $4.70.

STEEL SQUARE—45 per cent. off new list.

SHOVELS—Discounts on No. 1, No. 2, 60 and 2½ per cent.; No. 3, No. 4, 50 and 2½ per cent.; No. 1 scoops, 50 and 5 per cent.; all other grades 45 and 5 per cent.; fifty cents per dozen net is added to equalize eastern freights.

SOLDER—20c per lb.

LANTERNS—Cold blast, per doz., $7; coppered, $9; dash, $9.

ROPE—Sisal, 9½; pure manila, 11¼; British manila, 10c; lath yarn, 9½c.

CORRUGATED IRON AND ROOFING, Etc.—Corrugated iron, 28 gauge, $4; pressed standing seamed roofing, 28, painted, $3.20; galvanized, $4; 26, $3.55 and $4.35.

BAR IRON—Bar iron, $2.35; Swedish iron, $4.75; sleigh shoe steel, $2.50; spring steel, $3.40; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $8.50; Jessop, $13.

PIG LEAD—$5. Lead pipe, $6.

SHEET ZINC—Casks, $7.50; broken lots, $8.

COPPER—Planished copper, 33½c per lb.; tinned, 24c.

IRON PIPE—Black pipe, ¼ in., $2.45; ⅜, $2.75; ⅛, $3.30; ¾, $3.90; 1, $5.65; 1¼, $7.70; 1½, $9.25; 2, $12.35; 2½ $20; 3, $26.50; 4, $38; 4½, $50; 5, $48.50; 6, $62.50. Galvanized: ¼ in., $3.40; ⅜, $3.70; ½, $4; ¾, $5.20; 1, $7.50; 1¼, $10.20; 1½, $12.50; 2, $16.60; 2½, $30.

WEATHER STRIP—Wood and felt, No. 61, $1.25 per 100 feet; No. 62, $1.75; No. 64, $2.25. Blue felt, 40 cts. per pound.

FITTINGS — Wrought couplings, 60; nipples, 75; malleable fittings, 25; bushings and unions, 60.

GALVANIZED IRON — Apollo, 16-gauge, $3.65; 18, $3.70; 20, $3.75; 22 and 24, $3.85; 26, $4.05; 28, $4.45; 30-gauge or 10¾-oz., $4.65; Queen's Head, 20, $3.85, 24, $4.05; 26, $4.45; 28, $4.65.

TIN PLATES—I.C. charcoal, 20 x 28 full box, $9; ½ box, $4.75; IX. full box, $11, ¼ box, $5.75; IXX., full box, $13.50; ½ box, $7.

TERNE PLATES—I.C. plates, $8.50.

CANADA PLATES — Half polish, 6 and 7-inch, $3.15; 8-inch, $3.40, full polish, 6 and 7-inch, $3.90; 8-inch, $4.15

PETROLEUM AND GASOLENE — Silver Star, in bbls., per gal., 19c; Pennoline 25c; Sunlight, 21c; case $2.35; Family Safety, 24c; Search Light, 22c; National Light, 25, Silverlight, 21; engine gasolene, 24c; Acme Lamp, 30; White Lily, 23; Royal, 22½c; White Rose, 24.

PAINTS AND OILS — White lead, pure, $6 to $6.50, according to brand; bladder putty, in bbls., $2.50; in kegs, $2.55; turpentine, bbl. lots, 90c per gal. linseed oil, raw, 76; boiled, 3c per gal. advance on this price.

Edmonton Quotations.

BARB WIRE—$4 per 100 lbs.; plain twist wire, $4.25; brt. wire staples, $4; poultry netting, 50 per cent.

HORSESHOES — MRM and "Bell," $5 base.

HORSE NAILS — MRM., new cold process—No. 3, $4.50; 4, $4; 5, $3.75 6, $3.50; 7, $3.25; 8, $3.05; 9, $2.95; 10, 11 and 12, $2.85 in 25-lb. boxes. Less than 25-lb. boxes add 1c per lb.

WIRE NAILS—$3.45 base.

SCREWS — Flat head, bright, 85; brass, 75; round head, bright, 75 and 10; brass, 70 per cent.

BOLTS—Carriage, 3-16 and ¼, 60 per cent; 5-16 and ⅜, 4-inch and shorter, 55 per cent.; ⅜ (longer than 4-inch), 50 per cent.; 7-16 and up, 45 per cent; machine, ⅜ and under, 55 per cent.; 7-16 and over, 45 per cent; plow, 45 and 5 per cent; stove, 70 per cent.

SHOVELS — First grade, $10.50; fourth grade, $7.60 per dozens.

HARVEST TOOLS—50-10 per cent.

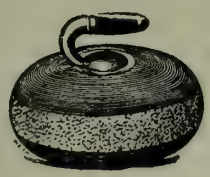
BRUSH HOOKS—$9 per dozen.

LANTERNS—No. 2 cold blast, $7.50 per dozen.

FILES—Arcade or Eagle, 70-10-5 per cent.

SOLDER—20c per lb.

WRINGERS—Royal Can., $38 dozen.

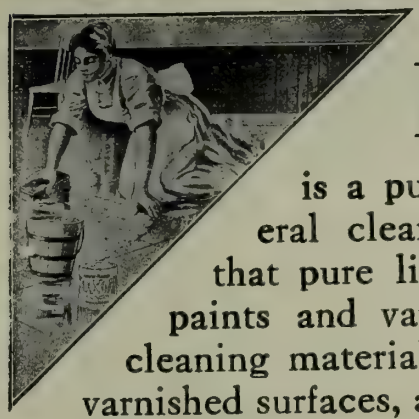


CHURNS—45 per cent.

ROPE — Sisal, 11c per lb.; British manila, 12c; pure manalia, 15c.

LINSEED OIL—Boiled, 80c; raw, 77c per gal. in barrel lots.

LUBRICATING OILS—600 W. cylinders, 80c; Maple Leaf cylinder, $1 per gal., 700 A. cylinder, 75c; Sterling cylinder, 55c; Perfection cylinder, 45c; Capital cylinder, light, 60 and dark, 55c; Solar red engine, 32; Atlantic red engine, 30c; Eldorado castor, heavy, 28c; medium, 28c; Ruddy harvestor, 30c; standard gas engine oil, 36c; Renown engine 38c.



Genuine "K" Red Hones

We import only this celebrated line of curling stones, which are universally recognized as the best made. The running surfaces are cut by a new process which ensures absolute accuracy and uniformity in play. We can supply in all weights from 36 to 42 lbs. each. Also curling-stone boxes, brooms and uniforms.

Liberal Discounts to the Trade.

SHERWIN-WILLIAMS

Flaxoap

is a pure linseed oil soap for general cleaning. Owing to the fact that pure linseed oil is the life of all paints and varnishes, Flaxoap is the best cleaning material to use on all painted and varnished surfaces, as it tends to keep the paint or varnish film in perfect condition.

Flaxoap is especially adapted for cleaning floors, woodwork and furniture. It is splendid for cleaning and polishing cut glass, windows and mirrors, and can be used with good results for cleaning automobiles, carriages and other highly polished surfaces.

This is a line you can profitably sell.

Write us for further particulars today on Flaxoap.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal waterworks and sewerage systems, railway or mining news, etc.

Industrial Activity.

The construction of the Welland glass works will be commenced next spring.

A. and F. Fraser are about to construct a saw mill at the head of Hazley's Bay, near Pembroke.

Work has been commenced on a 135-foot addition to the Provincial Steel Company's plant at Cobourg.

Donald Fraser & Sons will erect another mill at Fredericton, to take the place of the Aberdeen mill which was destroyed some years ago by fire.

The Toronto city architect has issued to the Fairbanks-Morse Co. a permit for a warehouse to be erected there. It will be four storeys high and cost $40,000.

M. Townsley & Son, Minneapolis, manufacturers of cable lightning arrestors, are looking over the ground at Brandon with a view to finding a location for a branch.

The sheet steel works at Morrisburg have resumed operations, having been partially shut down owing to making repairs at the power house. Two new rolls have been installed as well as two new furnaces.

A new industry for Toronto is to be a creosoting plant, which will turn out treated wooden blocks for street pavements. City Engineer Rust made an announcement that a big American concern will locate five or six such plants in Canada.

George T. Rosselle, of Cincinnati, acting on behalf of Geo. H. Paine, a Cincinnati capitalist, has completed the purchase of the stock and machinery for the manufacturing of the Sunlight gasoline light from the Sylvester Mfg. Co., Lindsay. A company for the manufacturing of gasoline lighting and heating devices exclusively will be organized and an industry started in Canada.

Upon the reopening of traffic in the North Arm, which is now blocked by the construction of the new bridge, the Westminster shingle mill on Lulu Island, B.C., will commence operations. The mill will have a daily capacity of 150,000 shingles. Six shingle machines are included in the plant. It is the intention of the company to erect a large lumber mill shortly, to which the shingle mill will be an auxiliary. Construction will probably be started in the spring.

The Canadian branch of the Crocker-Wheeler Mfg. Co., of Ampere, N.J., will be located at St. Catharines. The firm has one contract on hand now for the City of Winnipeg in connection with the big power works. This contract alone amounts to $250,000, it is said. This machinery will be made in St. Catharines, and it will be necessary to greatly enlarge the factory building the company have purchased from the city. While they agree to start with a hundred first-class mechanics, the company say that within a few years they will be employing perhaps a thousand.

Municipal Undertakings.

At the meeting of No. 2 committee of the London city council it was decided to adopt the city engineer's suggestion and install a storm water sewerage system at the expense of $60,000, which will be raised by debentures if the people are agreeable.

At a meeting of the Orillia Fire, Water, Light and Power Committee, it was decided to lay 10-inch water mains from Mississaga to Colborne streets on West and Andrew streets. It was also decided to lay an 8-inch main on Mississaga street west, from O'Brien street to beyond Douglas street. This is the first of the Mount Slaven extensions. The contract for supplying the iron pipe was awarded to the Canada Foundry Co., at $34.20 per ton, f.o.b., Orillia.

The Hamilton Sewers Committee awarded the contracts for the building of the new sewers on Imperial and Arthur streets and the base line in the annex. J. J. Armstrong got the contract for constructing part of the sewers on Imperial and Arthur streets, and Andrew Mercer was awarded the contract for constructing that part of the sewer on the base line. Thomas Williamson's tender of $1,325 to lay the iron pipe for the extension of the Ferguson avenue sewer through the revetment wall was accepted.

Superintendent Madison, of Vancouver, has outlined to the civic water committee the 1910 programme for the extension of permanent city mains. The list covered 3.05 miles of four-inch pipe, 8.26 miles of six-inch, .46 mile eight-inch, and 2.20 miles of 12-inch. One hundred hydrants will be placed at street intersections in connection with the laying of the main and proper crosses and valves also placed and installed. The estimates cost of the work is $79,380, which is provided in the $400,000 waterworks by-law passed last month.

Public Buildings.

A $20,000 armory is proposed to be built at Portage la Prairie.

A new six-room separate school to cost from $20,000 to $25,000 will be built at Brantford.

Waterloo, Ont., is to have a new Grand Trunk station, which will be built within a year.

Montreal city council will build a $10,000 residence at the corporation yards for one of its foremen.

The Church of the Epiphany congregation have decided to build a new edifice at Toronto immediately.

Plans for the new hospital at New Westminster are being considered this week. The cost will run from $75,000 to $125,000.

The new $25,000 post office to be built next year at Mitchell, Ont., will occupy the present town hall site, necessitating the erection of a new municipal building.

The Hamilton Markets, Jails and Police Committee have approved of the plans submitted by the Police Commissioners for a new central station, at a cost of $44,000, and an east end station, estimated to cost $6,000, and a by-law will be submitted to the ratepayers in January.

Revised plans of the union station which is being erected at Fort William by the C. P. R. are on file in the office of Mayor Peltier and show that the building will be considerably larger and more imposing that at first supposed. These plans call for an expenditure of $150,000.

Tenders for the building of the new joint police and fire stations in Rosemount and Mount Royal Wards, Montreal, have been awarded the lowest tenderers, Martineau & Prenoveau being successful in securing the contracts. For the Mount Royal Station their price was $60,300, and for the Rosemount, $57,251.

General Buildings.

Plans are under way by the Canadian Pacific to build a new hotel at Nelson, B.C.

The Canadian Foresters Hall Temple, Limited, held a meeting recently and decided to proceed with the erection of the new Foresters' Hall, on College street, Toronto, in the spring.

The following building permits were issued last week at Hamilton: Herbert H. New, addition to the Isolation Hospital, $8,000; Williams & Tomkins, two houses on John street, for Mrs. M. Munn, $3,000.

H. R. Reynolds has been granted a permit for a $15,000 building on the north side of Bloor street, Toronto. There will be stores and a moving picture theatre on the ground floor and

Railway Development.

The Goose Lake extension of the C. N. R. is within 150 miles of this city, and grading is still in progress.

Construction work on the C. P. R. branch from Phoenix to Wellington Camp, in the Boundary Country, B.C., has already commenced. W. P. Tierney & Co. are the contractors, and 75 men are employed.

Surveys have been completed for a million dollars' worth of reconstruction work on the line of the C. P. R. between Lytton and a point to the west of Hope, B.C. The survey covers between sixty and seventy miles of lines.

Surveys have been commenced for a new branch railway in York county, N.B. The new railway will be about fourteen miles in length from Millville, on the Gibson branch of the C.P.R., through Temperance Vale and out to Southampton Valley.

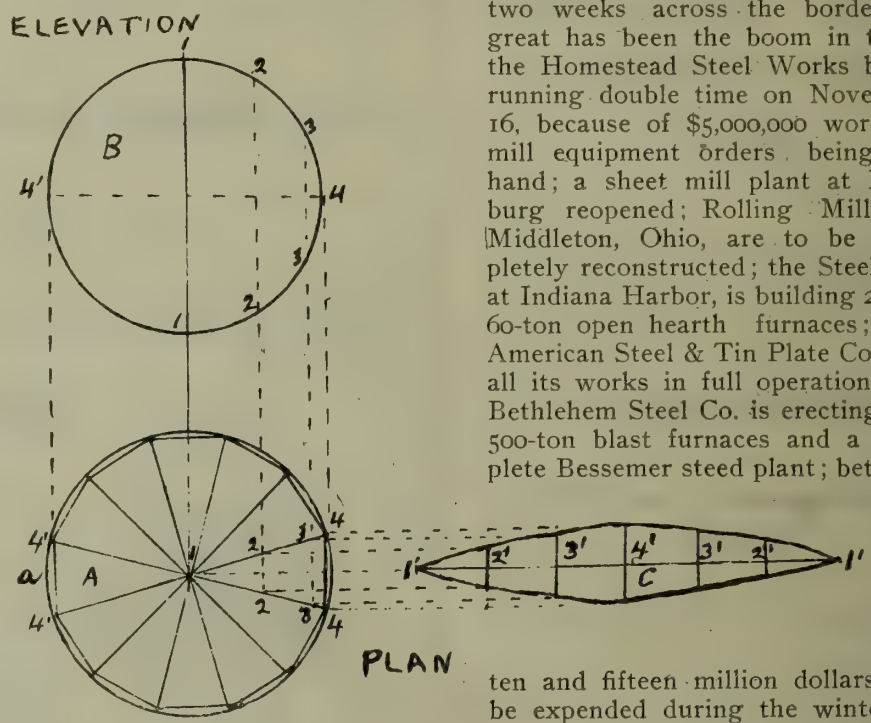
Application will be made to parliament for a charter to construct a railway, extending from 100 to 200 miles from a port on the north shore of Lake Winnipeg, to connect with the proposed railway from the Pass to either Fort Churchill or Nelson.

Notice has been given of an application to Parliament for the incorporation of a railway to be known as the Ontario & Ottawa Railway. The applicants ask for power to construct and operate lines of railroad from a point on the line of the Canadian Northern Ontario near Lake Couchiching to the Ottawa river, near Renfrew, thence to Ottawa.

New Companies.

Montreal Asbestos Co., Montreal; capital, $500,000; to mine, smelt and work asbestos. Incorporators, H. C. Organ, Q. E. Baxter and L. Normandin, Montreal.

The Union Iron Works, Toronto; capital, $200,000; to manufacture all kinds of machinery and implements, hardware, etc. Incorporators, J. T. White, C. W. Widdifield, and J. H. Cavell, Toronto.



Letters patent have been issued to William L. Bond, John J. Meagher, Ralph Burnett, J. S. Jamieson, Montreal, and James Edward Conlin, St. Louis, Que., to carry on the business of asbestos mining in all its branches throughout the Dominion of Canada and elsewhere. The company will be known as the Chrysotile Asbestos Mine, and will have a capital stock of $1,600,000. The chief place of business will be at Montreal.

Cutting Patterns in the Tin Shop

Readers of Hardware and Metal are Requested to Make Use of this Department—Questions Regarding Patterns Will be Answered by Experts—Discussion is Also Invited on Any Matter pertaining to the Tin Shop.

PATTERN FOR SPHERE.

To describe a pattern for a sphere or ball composed of twelve vertical sections let B represent the elevation of the sphere and A represent the plan of it which is divided into as many sides as the sphere is to have vertical sections, namely twelve (12). Be careful that the two opposite sides 4-4 and 4^1-4^1 in the plan run parallel to the centre line as shown. Make the diameter of the sphere 4-4" 10 inches. Divide the half elevation into an equal number of spaces as 1-4-1 and from these

Pattern for Sphere.

points drop lines at right angles to 4-4" and intersecting the mitre line 1-4 in plan as shown. Now draw any horizontal line, as 1^1-1^1, and on it place the stretchout of 1-4-1 in elevation as shown by 1^1-4^1-1^1 on the line 1^1-1^1 in C. Through these points draw lines at right angles to 1^1-1^1 and intersect them by lines drawn from similarly numbered intersections on the mitre lines 1-4 in plan at right angles to 4-4. A line traced through the points thus obtained as shown by C will be the pattern.

It will be noticed in the plan view that the sphere is not perfectly round, but it may be made so by blocking. If the sphere is to be elevated to any height it will not be necessary to block it as in elevation the sphere appears perfectly round. It should be mentioned that the greater number of sections formed, the truer will be the sphere. Be sure and allow a little on each section where blocking is necessary.

W. M. M.

ACTIVITY IN U. S.

As showing the expansion of the iron and steel trade during the past two weeks across the border, so great has been the boom in trade, the Homestead Steel Works began running double time on November 16, because of $5,000,000 worth of mill equipment orders being on hand; a sheet mill plant at Pittsburg reopened; Rolling Mills at Middleton, Ohio, are to be completely reconstructed; the Steel Co., at Indiana Harbor, is building 2 new 60-ton open hearth furnaces; the American Steel & Tin Plate Co. has all its works in full operation; the Bethlehem Steel Co. is erecting two 500-ton blast furnaces and a complete Bessemer steed plant; between ten and fifteen million dollars will be expended during the winter on the steel corporations plants at Youngstown, Ohio; the Pennsylvania Railroad will erect $2,000,000 car shops at Terre Haute, Ind.; the American Iron & Steel Mfg. Co. will build a $500,000 steel billet mill at Lebanon, Pa., and the Carnegie blast furnace at Zanesville, Ohio, resumed on November 14, after a two-years' shutdown—all this within two weeks.

Dovercourt Presbyterian church, Toronto, will erect a Sunday school hall on the lot at the rear of the present edifice, that will accommodate 1,000 scholars. The cost will be $80,000, and the work will be begun next spring.

The Retail Paint Trade

HIGHER PRICED PAINTS

There seems little doubt that the price of paints in Canada will advance before long. The article in Hardware and Metal last week showed which way the wind was blowing, and a thorough inquiry of the trade strengthens this view. A higher price is but a natural consequence of the changes that have occurred in crude materials with the maintenance of high quality.

It does not matter which component part of paint that is taken—it will be noticed that heavy advances have occurred during the year. Linseed oil, turpentine, zinc oxide, dry white lead (about 40c higher), and colors generally, have all been the same. Ground white lead has been the only article to decline, owing to the grinders falling out among themselves, but indications are that this cutting is nearing its end, as several brands have this week been advanced 10c, and the market seems to be getting into line again. Thus the whole trend of affairs points to an advance.

The Canadian market has also been made stiffer by the action of the United States paint manufacturers, who have advanced their prices, 5c per gallon on floor paints, and 10c on house and barn paints, carriage paints, stains, oils and colors. A stronger increase than this was asked for by some interests, so that there can be no doubt as to the general opinion on the other side of the border, and the same reasons which actuated these manufacturers must influence Canadian ones.

The trade, therefore, must be prepared for higher prices. After all paint is but following the track of merchandise generally. The markets are stiff all the way round, and but very few have shown a retrograde movement. There is one thing about an advancing market that is very comforting, and that is it denotes a general commercial prosperity, and in common with other lines, paints have had a very good year indeed.

All the large houses report most excellent business. There is more painting going on than ever, and although the cult of decoration, as we may call it, has not reached the dimensions it has done in the States, where prettily painted houses abound, yet the development is go-

Great Holding and Driving Qualities

The Montreal Rolling Mills Co.
MONTREAL

ing on apace in Canada, and more people are realising every day that there is nothing like paint to beautify and preserve a house, and incidentally to increase its monetary value. Merchants, too, now realise what a valuable trade asset they have in a well looked after paint department, especially in these days of sole agencies, when all the advertising forces of each manufacturer are working for individual interests alone. More business is being done every year, and as the manufacturers keep on with their campaign, so the business will develop at even greater rapidity.

With all this improvement the great point of quality stands out. The merchant must sell reputable lines. The whole basis of success in paint selling depends upon quality, the leading manufacturers recognize this, and so must all merchants. Quality, and not price, must be the motto of the trade. It is better for merchants, generally, that manufacturers should raise their prices, when crude materials make it necessary, than there should be any falling off in the quality. There is always the one consolation that higher prices never spoiled a demand when customers are as prosperous as they are to-day.

PAINT AND OIL MARKETS

MONTREAL.

December 3.—Considering the time of the year, excellent trade has been done, good shipments in most of the staples being reported all along the line. There are indications that ground white lead grinders are trying to get into line again, and an advance of 10c per 100 lbs. is reported in some lines. No other price changes are announced. Turpentine is steady, while linseed oil is very firm.

Prepared paints have been selling very well. Fine weather conditions, especially in Ontario, have largely encouraged the use of paints, while there has been freer buying in some quarters, owing to the strong feeling that paint is billed for an early advance, owing to the greater cost of crude materials, and the higher price movement in the States. Household lines in handy-sized tins are very popular at present.

TURPENTINE — Encouraged by the steadiness of the market there has been a slightly better inquiry, and some encouraging orders have been booked. We continue to quote from 78c to 80c for single barrels.

LINSEED OIL—The turn-over is very fair, buying being free in spite of the stiff market now prevailing. No change is announced, and we quote: 1 to 4 barrels, in one delivery, raw, 73c per gal.; boiled, 76c per gal.; net 30 days, f.o.b., Montreal.

GROUND WHITE LEAD — It was not thought that white lead would long continue on the level which has prevailed for some time, and the first step of the grinders to get into line has been made by the advance of 10c per 100 lbs. in some brands. Shipments are very good, with many inquiries for winter delivery. We now quote: Strictly pure about $5.35 to $5.85, according to quality, and No. 1, $4.95 to $5.35, f.o.b., Montreal.

RED LEAD—The demand continues steady, but the market has no strong features as is always the case at this time of the year. We continue to quote: Genuine read lead in casks, $4.25; in 100-lb. kegs, $4.75; less quantities at $5.75 per 100 lbs.; No. 1 red lead, casks, $3.75; kegs, $4.25, and smaller quantities, $5.25.

PARIS GREEN — Desultory inquiries have been coming in from various districts regarding quotations for Paris Green for 1910, and prospects look good for an active demand. It has been found impossible to answer these inquiries at present, the fluctuations in chemicals, and the general uncertainty of quoting on an article long before it is placed in actual use, precluding the idea of quoting with any degree of stability.

COLORS—There has been a strong demand for all classes of dry colors indicating good healthy conditions in trade generally. For colors and paints ground in oil, in Japan, or in varnish most encouraging shipments are reported.

VARNISHES AND JAPANS—There is a slight falling off in the call for varnishes and Japans, which is believed to be only temporary with the present satisfactory industrial conditions. Varnishes in small size tins are selling well.

WHITING—Paris white, builders' whiting, and chalk have been showing strong shipments. As the matter of freight largely figures in the cost of these items, buyers have been anxious to store all they could during the fine weather. It is probable that all quo-

White Lead

At the present time the white lead situation is interesting.

We are the only firm in Canada who corrode and grind white lead, in addition to making Varnish, Dry Colors, Paints, Enamels, etc., etc.

Our white lead proposition is naturally the very best.

MURESCO

easily holds first place in producing that subdued velvety appearance which is so much desired. It will take 30% more water than any other similar preparation, is artistic in appearance, durable and sanitary, and is a very profitable line to handle. One coat of **MURESCO** is, as a rule, found to be sufficient.

International Varnish Co., Limited

TORONTO—Branch of Standard Varnish Works

New York Chicago London Berlin Brussels

tations will shortly be advanced at least 10c per 100 lbs.

PUTTY—The demand for putty has slackened off with the close of navigation, but a fair demand still obtains. We quote: Standard putty, 800 lbs. in casks, $1.75; in 100-lb. drums, $2; bladder putty, 400 lbs. in barrels, $2.15; in 100-lb. cases, $2.25; in 25-lb. tins, $2.15; 12½-lb. tins, $3.25, f.o.b., Montreal.

TORONTO.

December 3.—Trading in paint lines continues very good, the change from wintry to milder weather has induced the selling of white lead for outdoor painting, quite a bit of which is going on in the down-town section of the city. The market is firm, and since the close of navigation, with higher freight rates ruling, prices are strong. Whiting has increased in price, and lead seems ready for an advance. Other lines remain stationary. Glass and putty are still active.

Some manufacturers and jobbers are looking towards the close of the year, and a few of the travelers are in until the new year. On all sides satisfaction is expressed, with the outcome of the year's business. Resins remain firm, but there are indications that parties are beginning to be nervous about the extraordinary accumulation at Savannah, which is shown by an application to the U. S. Government to put in force some clauses of the tariff, which bear upon resin and resin importations. At the present time the finer grades of resin are still scarce and prices very high.

TURPENTINE—Local sales are light, and the low prices of a week ago still hold good. Single barrels range from 79c to 80c. In the south the market has been fluctuating slightly, and owing to Thursday week being Thanksgiving Day in the United States, no business was done, which had the result of leaving some extra accumulation at the shipping points. The season has continued very dry in the southern States, which has been a factor in permitting the producers to gather up the end of a crop, which at some seasons they have been prevented from doing by the rain coming earlier; but some danger is anticipated from fire taking place in these turpentine forests and they are finding it necessary to exercise extraordinary vigilance to prevent these fire starting.

LINSEED OIL—The market remains steady. The market for flaxseed in Chicago has met some further advances during the week, and unless supplies can be found at some other point for the Canadian trade the crushers may be forced to make a further advance, though the South American seed has to be reckoned with in the course of a few weeks, which may have a tendency to prevent further advances. Local quotations are very firm at the old prices—73c for raw and 76c for boiled oil in single barrels. Sales are only fair.

GLASS—Discount is unchanged at 30 per cent. for the present. Demand is yet heavy, with fair stocks only being carried.

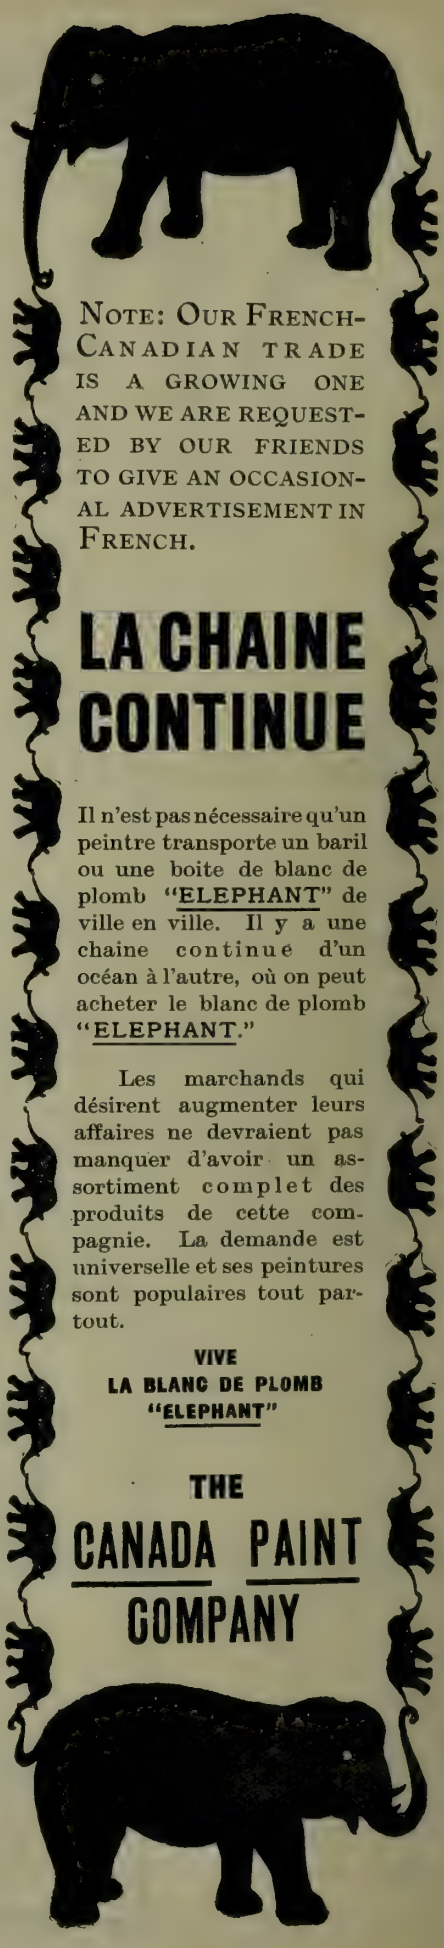
PUTTY—This line, too, is selling well at unchanged prices. Casks of bulk putty are worth $1.75 per 100 pounds; drums (100-lbs.) $2, and bladders, in barrels, $2.15.

WHITE LEAD — Business this week has again been excellent. Prices remain steady, though there is a tendency toward higher prices, which may come soon. Prices are still $5.55 to $6 for ordinary quantities.

RED LEAD—Business is fair at steady prices. Quotaions run from $4.25 to $4.55.

HOUSEHOLD LINES — Paint goods used about the house are selling steadily. Whiting has gone up 10c a hundred, and is now at 75c.

PETROLEUM—Good steady business is passing at fair prices. Prime white is 13½c; water white, 15½c; and Pratt's astral, 17½c.



PLAYING WITH FIRE.

A can of gasolene can be handled as safely as a can of oil, for liquid gasolene does not explode. It is the gasolene vapor that is highly explosive when properly mixed with air. The Scientific American recently published three illustrations showing the safety with which burning gasolene may be handled. One showed a man pouring burning gasolene from one can into another. In a second he was blowing into the spout of a can of gasolene to which a match had been applied. The little blue flame that ordinarily plays around the mouth of the can was transformed into a burning torch. The third showed a pool of burning gasolene on the floor, and two gasolene cans aflame, but there was no explosion.

CATALOGUES WANTED.

Kidd & Clements, Wapella, Sask., write Hardware and Metal as follows:

"Having had all our hardware catalogues destroyed in our recent fire, we take this means of advising the different jobbers and manufacturers who have our name on their lists, that we would appreciate new copies of their latest catalogues."

Once More!

PAINTS FOR 1910

You have about finished the paint season of 1909. You have a pretty good idea whether you got your share of the paint trade or not. If you did not get it, you should get it, and for 1910 you can get it. Here is the leader.

With the Ramsay Paints you can get trade if you use our plans. Many of our agents are already planning for 1910. Many in remote parts have already got stock in to open the next year's trade early. Already new agents in other centres are booked with us. Will you join? It won't cost you anything to find out how it will figure out for you if you will write us or ask to see our traveller. Now is the time to think up paints for 1910.

Hardest Job in the World

IF you are trying to build up a big paint business with inferior paints, Mr. Dealer, you have got the hardest job in the world before you. You may sell a lot of it—but the more of it you sell the more trouble you are piling up for yourself, and you'll have a merry time trying to explain bye-and-bye. More businesses are wrecked on the rock—"IF"—than on any other. You can't get around the *ifs*—you can't climb over them, nor squeeze through them—*you must get rid of them.*

Martin-Senour Paint—100% Pure

never needs an apology—no *ifs* in its manufacture—no *ifs* when you sell it—no *ifs* to explain after the customer uses it. You'll get rid of every *if* the moment you get rid of inferior paints and begin to sell the Martin-Senour Line—and you will begin to make more money, too. Suppose you write today for the proof of what we say—get our price list and plans to build up the dealer's paint trade.

Have You Tried One?

Hardware dealers are continually finding new ways in which they can use to advantage our "WANT ADS."

F. Y. W. Brathwaite, Blind River, Ont., writes us under date of Nov. 27 :

"Please take my advertisement out of HARDWARE AND METAL. The small expenditure which this advertisement cost me has saved me about $35.00, as I have bought all the rifles I wanted at a great saving on present price.

I wish to congratulate you on the circulation of your paper as I received replies from almost every province of the Dominion."

Here is the "WANT AD." which brought such splendid results.

SIXTY SWISS ARMY RIFLES, at $2.50 each. Box 920, HARDWARE AND METAL, Toronto, (48)

This advertisement was inserted in two issues of our paper and cost 39c. Don't you think this was a pretty good investment?

Our Want Ad. page is at your service every week. If you have anything to sell to Hardware dealers in Canada, or wish to buy anything from them, try a want ad. You will find it will give you **Economical, Efficient** and **Quick** service.

RATES :—2c. per word for the first insertion.
1c. per word for each subsequent insertion.
5c. additional each insertion when box number is required.

The "STAR"
Convex Flexible Safety Blade
Razor

is entirely different to every other safety razor. Two of its special features are the convex curve which holds the blade perfectly firm, and the absence of metal obstruction between the blade and beard, which assures an easy, clean shave. The "STAR" with a set of seven blades will have a longer life than any double-edged razor, as the latter is always damaged by handling.

The blades are uniform and the greatest care is taken in tempering and hardening. This is a splendid line to stock. It is the very 'last word' in Razors.

HOLIDAY PRIZE COMPE-TITIONS

SIX PRIZES FOR WINDOW DISPLAYS

For the three best selling window displays shown in a city over 10,000 population, and for the three best in towns and villages under 10,000 population.

In each division there will be three prizes as follows: 1st, $5 in cash; 2nd, and 3rd, copies of "Hardware Window Dressing" (cloth bound) $2.50—making in all six prizes, totaling in value to $20.

To enter the contest send a clear photo of one or more Christmas windows, made up of articles usually sold in hardware stores, with a description and the name of the person who arranged the display. Photos must be mailed to us by December 31.

TWO PRIZES FOR HOLIDAY ADS.

Two prizes of $5 each are offered for the best newspaper advertisements about Christmas goods, such as cutlery, silverware, sporting goods, lamps, stoves, carpet sweepers, household goods or other holiday lines. Forward one or more clippings from your local paper to us, with the name of the writer of the advertisement, and the name of the paper it was clipped from. As in the window competition, a division is made, one prize being open to those in cities over 10,000 population, and another to those in smaller places.

With the ad. send a copy of any booklet issued, and a description of any special selling plans or display features used during the holiday season.

The awards will be made by experts, and will be announced, with reproductions of the prize ad, and windows, shortly after the close of the contest. All entries should be mailed not later than December 31.

Address: "The Editor HARDWARE AND METAL," 10 Front Street East, Toronto.

Sell Clark Heaters and Coal

Here's the "BIG HIT" Assortment

2 Leader Heaters
2 No. 5B Heaters
2 No. 7D Heaters

6 Dozen Clark Fuel Brickettes (Best Grade)

Some of these heaters you can sell as low as $1.20 and make a good profit.

The Proposition to Dealers is Mighty Interesting

Its a proposition that means ready sales and liberal profits.

Everyone who drives or owns a carriage, wagon, sleigh, automobile—any kind of vehicle—needs them. Everybody traveling in cold weather needs them. The need is known—the demand is positive—It's for the dealer to supply the product and pocket the profits.

Clark Heaters and Clark Coal sell wherever displayed. The wonderful compactness, the unique principe of heat distribution, the neat appearance, the low price—all are factors that make Clark Heaters the unchallenged leaders.

Our guarantee goes with each, and the guarantee protects the dealer and the consumer.

And the coal is just such another proposition. To **prove conclusively** that it's better than other fuel, we give a guarantee, **with each brickette,** that it will give 25 per cent more heat than any other heater fuel made.

DEALERS——ACT NOW

The season is on. Send for the "Big Hit" assortment and add more dollars to your profit. Send to your jobber. Put a heater just inside your store—where customers can **feel** the goodness of it. "Warm them up" to the necessity of buying from **you.** We'll help.

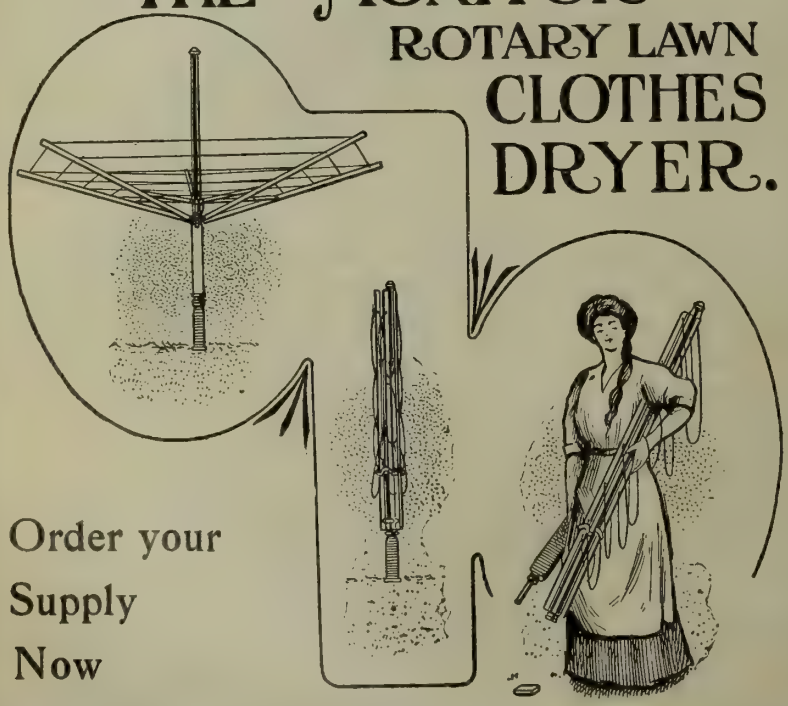
A Western Sportsman's View of
The ROSS SPORTING RIFLE

Crandall Beamish, writing from Onoway, Alberta, says :—

"The Sporting Rifle I bought of you is giving first-class satisfaction. It cannot be surpassed for accuracy and smoothness of action. I can heartily recommend it."

The same sentiment is expressed in hundreds of testimonials from all over the world. The points that are universally emphasised are—



Appearance - Accuracy - Reliability

There is no part of Canada from which these reports do not come, and there is not a town in Canada where Ross Sporting Rifles will not be in demand.

ROSS RIFLE CO. - - QUEBEC

Something that every housekeeper will want

THE MONITOR ROTARY LAWN CLOTHES DRYER.

Order your Supply Now

and on account of our advertising it won't be long before they'll be coming to your store asking for the

MONITOR

150 ft. line, and every line within easy reach. Stand in one spot to hang out a large wash.

The lines come to you

NO tramping through wet, snow or mud, carting a heavy clothes basket around the yard. NO soiled clothes. NO dirty lines. NO obstruction on lawn or in yard. NO trouble to set up and take down.

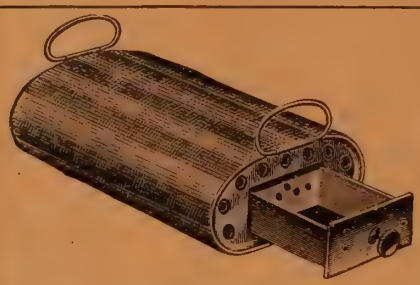
Clark Carriage Heaters



COST NO MORE

than the cheap, ***cast end*** makeshifts sometimes offered to dealers who have not had an opportunity to examine and know the Clark heaters.

The cheaply constructed cast end heater is liable to break at any time if it is brought in forcible contact with any hard object.

There are no castings of any kind in a Clark heater.

A Clark heater will not bend or break. Each one is guaranteed to please or money refunded.

No. 5B Clark Heater

No. 7D, showing side and end ventilators.

No. 7D Clark Heater

No. 7X Clark Heater

This is a profitable winter line to handle. Clark heaters are the most extensively advertised to your customers of all heaters.

All the leading jobbers of Canada carry Clark heaters. Insist on them, for they cost no more and please better.

CLARK COAL

is the recognized king of heater fuels. Every brick is guaranteed to give 25 per cent more heat than any other prepared fuel on the market.

Our ABC Coal is guaranteed to equal any coal on the market, outside of our Clark Coal.

Get this fuel, which has a reputation, and lives up to it. It means satisfaction to you and your customers.

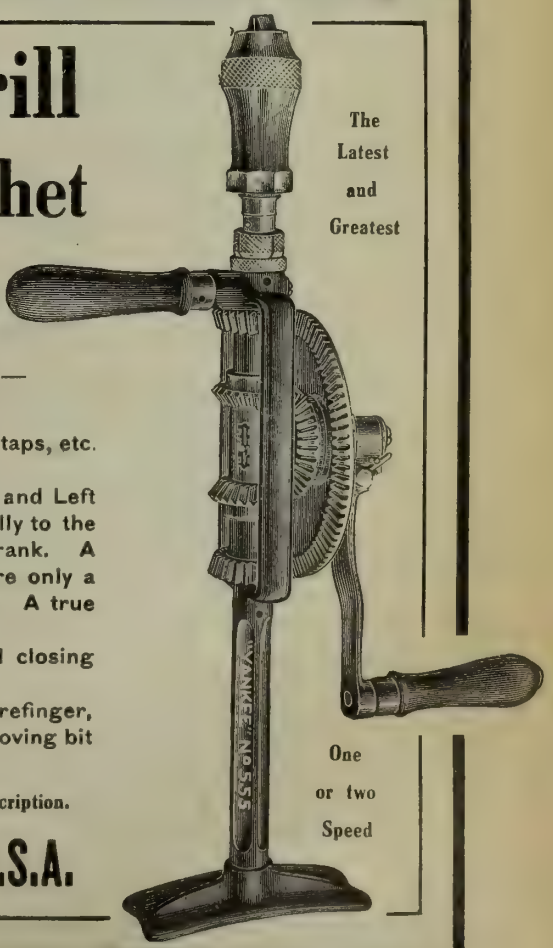
"YANKEE" Breast Drill with Automatic Double Ratchet Adjustable Ball Bearings



Notice the little shifter between the gears:—

Notch 1—gives you a plain drill.
Notch 2—A Left Hand Ratchet for removing taps, etc.
Notch 3 - A Right Hand Ratchet.
Notch 4—An Automatic, Alternating Right and Left Hand Ratchet, the bit turning continually to the right regardless of the motion of the crank. A great advantage at close quarters where only a short throw of crank can be obtained. A true time saver.
Notch 5—Locks drill for opening and closing chuck.
Lever A—Change of speed with forefinger, without releasing hold on crank or removing bit from hole.

Sold by leading jobbers. Write for full description.

NORTH BROS. MFG. CO., Philadelphia, Pa., U.S.A.

"The fireproof age means sheet metal taking the place of wood—more money for you."
—The Philosopher of Metal Town

Fireproof Lathing

Get after the Architects and Contractors in your town. Convince them of the economical, durable and fireproof qualities of the "HAYES" Steel Lath. Suggest using it in the contemplated new buildings. It means big business for you. We will give you estimate of complete cost of lathing for any building---you get the measurements.

Absolutely fireproof is the aim in building now-a-days. Steel must be used in place of wood.

The "HAYES" Patent METALLIC LATH

is made from the finest sheet steel. It is easier and quicker to erect, being made in large sheets and requires 50 per cent. less mortar than any other lathing. The flanges on the "Hayes" Lathing grip the plaster firmly. This, together with the extra stiffness of the "Hayes" Lath, makes a rigid wall, unequalled in any other method of hollow wall construction. The "Hayes" Metallic Lath is used extensively as a backing for decorative tiled fronts, columns, etc. It is a firm, lasting basis upon which to lay the cement.

We Manufacture---
Metallic Rock Faced Siding, "Eastlake" and "Empire" Steel Shingles, Metallic Ceilings and Walls, Cornices, Finials, Ventilators, Skylights, Conductor Pipe, Eavetrough, Corrugated Iron, "Impervia" Fireproof Glass Windows and Doors, and a general line of Architectural Sheet Metal Goods.

We will send you full information and suggestions for its many uses if you will write us.

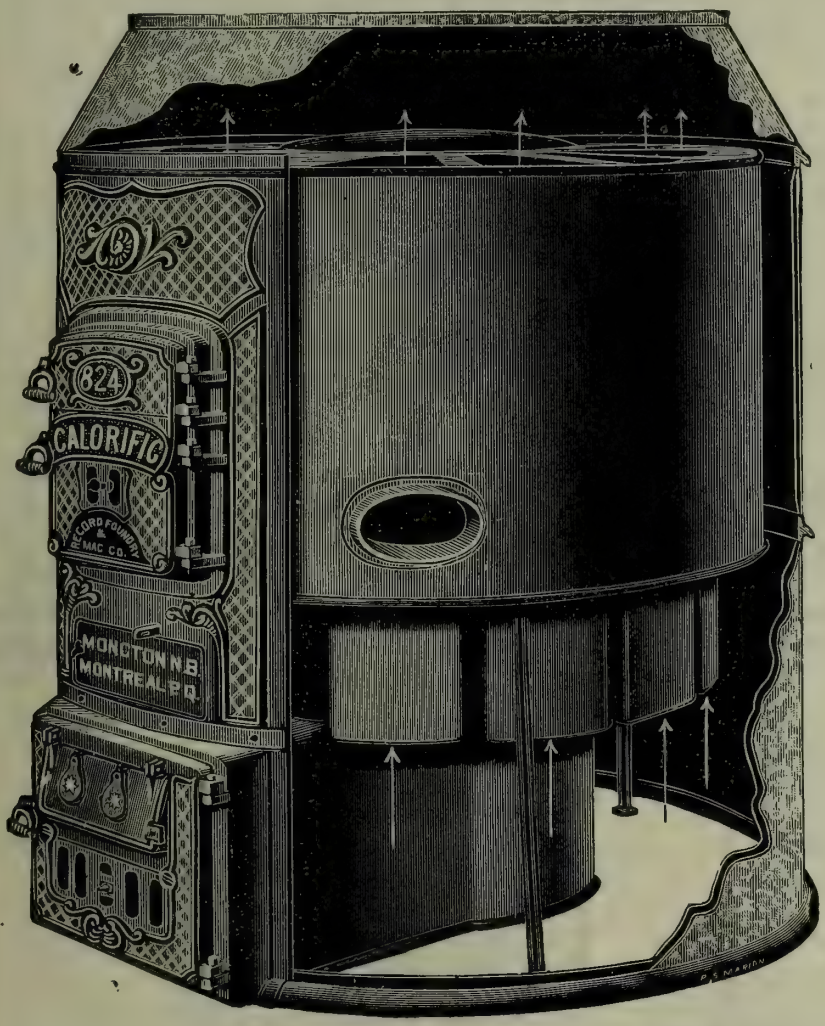
"JEWEL" STOVES and RANGES

The Ideal Jewel Heater With Its New 1909 Dress

Dress does not make the man, neither does it make the stove, but it certainly improves the appearance of both man and stove.

The Ideal Jewel has been on the market for a number of years and proved itself a Perfect Heater in every way. Now, that it has been redressed, it is one of the handsomest and most thoroughly reliable heating stoves on the market.



Mr. Stove Dealer—If you expect your full share of the fall trade you must keep your stock up-to-date. The Ideal has every modern improvement known to the stove trade. With or without oven.

Manufactured by

The Burrow, Stewart & Milne Co., LIMITED

Hamilton, Canada

"FURNACE HEATING IN A HIGH CLASS RESIDENCE" was the title of an able article in this paper on NOV. 27 last. The writer, P. H. McCarthy of the Federal Furnace League, is an AUTHORITY on such matters. He dealt with a number of hot air furnaces but finally the ONLY ONE that REACHED what he believed to be PERFECTION OF ITS KIND WAS "THE CALORIFIC" and he specified THE NO. 830 CALORIFIC. This is what he said:—

"To select a furnace of such size that it would have ample reserve power to heat the building in the coldest weather, especially when it is found that 19 separate pipes were required, was a problem. Finally a No. 830 calorific furnace, which has about 55 sq. ft. of heating surface to 1 sq. ft. of grate was installed. It will be noted on the cellar plan that the heating contractors accomplished the placing of the pipes, and have also been able to do so without the necessity of carrying any one pipe across the top of the furnace. All pipes are aligned and brought directly to the risers."

The Calorific is the Acme of Modern Scientific Furnace Construction.

Here are its leading features:

Positive circulation of warm air.

Cold Smoke pipe ensuring no waste of heat or fuel.

It has More Radiation than any other furnace on the market and will last longer.

If our furnaces do not accomplish all that we claim we refund your money. What more could any firm do ?

We have a complete line of Stoves and Ranges that dominate the market in price and quality.

HOLIDAY PRIZE COMPETITIONS

Open to Canadian Hardware Merchants and Clerks

SIX PRIZES FOR WINDOW DISPLAYS

For the three best selling window displays shown in a city over 10,000 population, and for the three best in towns and villages under 10,000 population.

In each division there will be three prizes as follows: 1st, $5 in cash; 2nd, and 3rd, copies of "Hardware Window Dressing" (cloth bound) $2.50—making in all six prizes, totaling in value to $20.

To enter the contest send a clear photo of one or more Christmas windows, made up of articles usually sold in hardware stores, with a description and the name of the person who arranged the display. Photos must be mailed to us by December 31.

TWO PRIZES FOR HOLIDAY ADS.

Two prizes of $5 each are offered for the best newspaper advertisements about Christmas goods, such as cutlery, silverware, sporting goods, lamps, stoves, carpet sweepers, household goods or other holiday lines. Forward one or more clippings from your local paper to us, with the name of the writer of the advertisement, and the name of the paper it was clipped from. As in the window competition, a division is made, one prize being open to those in cities over 10,000 population, and another to those in smaller places.

With the ad. send a copy of any booklet issued, and a description of any special selling plans or display features used during the holiday season.

The awards will be made by experts, and will be announced, with reproductions of the prize ad, and windows, shortly after the close of the contest. All entries should be mailed not later than December 31.

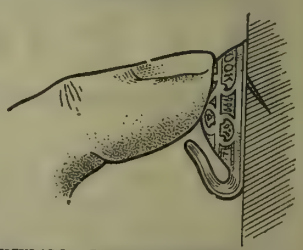
Ford's Auger Bit

is an all round Bit, boring smoothly, and well suited to the finest work. For many difficult jobs it is the only tool that can be used. Give it a trial, and afterwards you will sell only one line of high-grade Bits, and that line will be Ford's.

FORD AUGER BIT CO.,



108 Cabot Street, HOLYOKE, MASS., U.S.A.

THE HANDIHOOK IS A SURE SELLER

"DON'T LOOK FOR A HAMMER! DON'T SCREW IT IN!" THATS WHAT TO TELL YOUR CUSTOMERS ABOUT IT.

Simply press the Handihook with your thumb. That's all it needs. Once up, it'll hold 10 pounds as easily as it does an ounce. And it won't disfigure your wall or woodwork.

For hanging the hundred and one things around the home, office, store or factory, the Handihook is the best hook ever devised. Can't be beaten for hanging pictures, signs, calendars, coats, waists, skirts, whisks, towels, reference books utensils, etc. Made in gun metal, nickel and antique copper.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, munufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

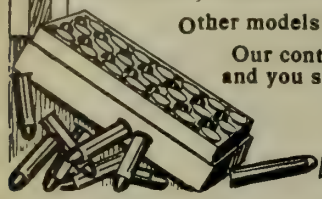
HAMILTON (22 Calibre) RIFLES

Money Makers

Models 27 and 027

Prices $2.00 and $2.25

We Specialize on Boys' Rifles



We build our rifles under patents exclusively our own and confidently claim to make the best rifle ever built for the money.

MODEL No. 27 is an efficient sporting rifle, with hammer action, of few parts and exceedingly simple, using 22 calibre short or long cartridges. The barrel is bronze, rifled and steel jacketed, finished in blue black gun finish. Breaks down for loading and ejecting shells. Flat stock and forearm of gun of gum wood. A beautiful model, symmetrical and well balanced. Barrel is 16 inches long, length of rifle over all, 30 inches. **Price $2.00.**

MODEL No. 027 is exactly like No. 27, except the stock and forearm, which are of genuine walnut, turned and beautifully finished. **Price $2.25.**

Other models are Nos. 15 at $2.00, 19 at $2.50 and 23 at $3.50, each a winner in its class.

Our continuous advertising in the boys' papers will bring the business to you, as every boy will want one and you should have a stock on hand. Write for catalogue and net trade prices.

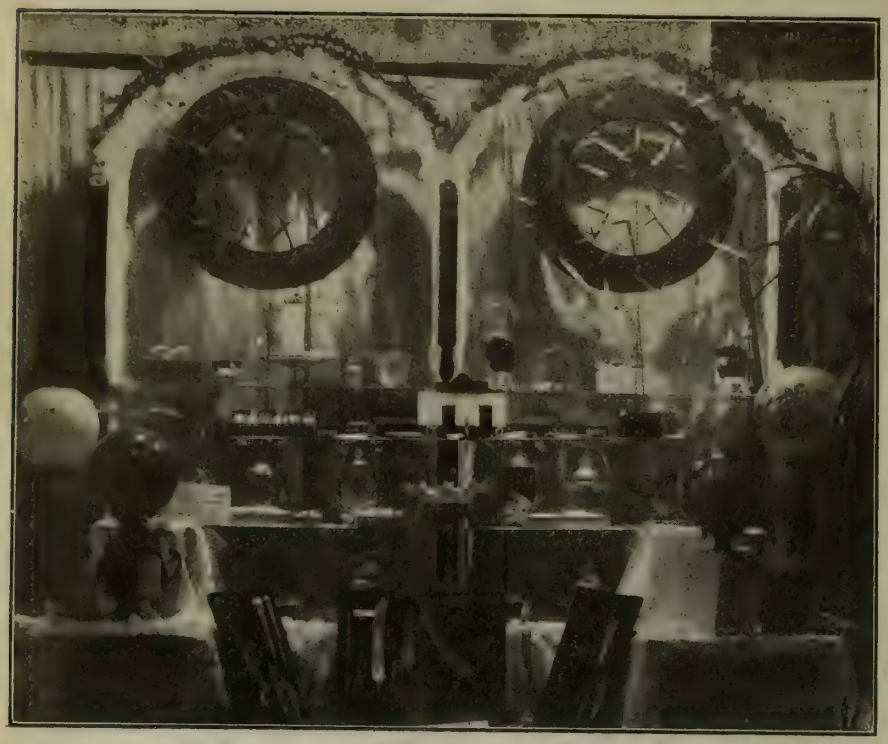
Holiday Window Displays Should Be Photographed

Advantages to both Merchant and Clerk in Having Photos Taken—Prints Need Not be Mounted—How to Overcome Reflections—Displays at Peterboro, Gladstone, Man., and Vancouver Described.

Hardware merchants or clerks who are enterprising enough to prepare a special holiday window display should not hesitate to go to a little additional expense in having the local photographer, or an experienced amateur, take a picture of the window. Such a photo will not cost more than $1, for an unmounted print, it being an unnecessary waste to mount the picture on an expensive card, unless for some special purpose. An unmounted print, for instance, costs less to mail and is as serviceable to a trade newspaper as a mounted picture.

Estimating the cost of a photo at $1, the merchant or clerk can be recompensed for the outlay in many ways. In the first place the photo will be very valuable next fall, when plans are made for another holiday season. A scrap book of such photos will be a valuable source of suggestion, as to how to improve on previous efforts. Lessons can always be learned by studying the work of others, but a trimmer can best improve by trying to excel his previous efforts, and in so doing, it is a great advantage to be able to refer to something better than mere memory as to what the previous standard of excellence was.

Then the trade paper is always willing to go to $3 or $4 expense in having an engraving made from a good photo of a window display. Hardware and Metal, for instance, is now offering six prizes for the best six Christmas window displays, three going to competitors in cities over 10,000, and three in the smaller places. Both to the merchant and window trimmer, the publicity gained by

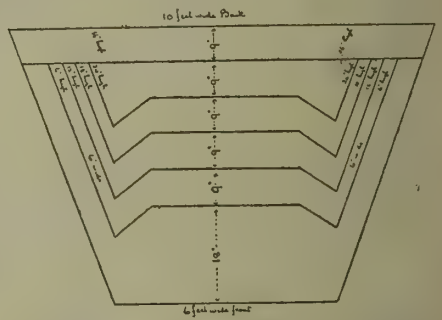


How to Avoid Reflections in Taking Photos of Windows.

having a window display reproduced in Hardware and Metal is of considerable value. It is an advantage to the merchant to be recognized by manufacturers and jobbers, as well as by his fellow retailers, as being above the average in business enterprise—it, in a sense, adds to the standing and good-will of his business. And the clerk who wins a reputation as a window trimmer increases his value to his present, or some other employer. It lifts him above the commonplace and ensures his future advancement, as well as helping to build a foundation upon which to rear a business of his own, when the time arrives for him to launch out for himself.

Advantage lies in still another direction. When a window display is of such excellence as to merit publication in the trade paper, the engraving can be borrowed and used in the reading columns of the local paper, or on advertising matter. The local editor, as a rule, will be glad to reproduce the illustration free of cost with the explanation that the local hardware store, mentioning the trimmer's name, is winning a name for enterprise, a picture of their window display having been commented upon favorably by Hardware and Metal, which is read by hardware merchants in every corner of the Dominion. Notices of this kind, backed up by sample photographs and a letter of commendation from his employer, will be of great assistance to a clerk in improving his position, if he and his employer find that they cannot agree as to what is fair remuneration for services performed.

Display of Silverware, Made by Peterboro Hardware Co, in Which Black and White Cotton Plays an Important Part—. The Selling Value of the Display is Decreased by the Absence of Price Tickets.

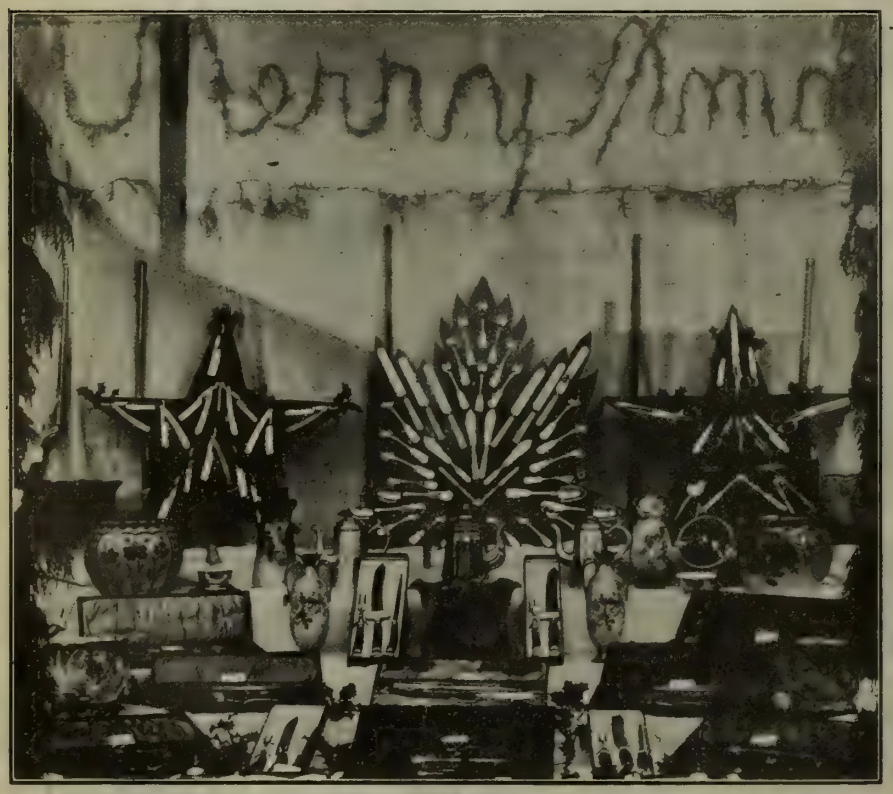


Christmas Window, arranged by A. M. Nairn, for Williams Bros., Gladstone, Man., a Y ear ago.

Many mistakes are made in taking photographs which are too small to show the detail of the display. Hardware and Metal, for instance, frequently receives photos of post card size, which cannot be used. The chief difficulty, however, is found in overcoming the reflections from buildings or trees across the road, when photos are taken in the daytime.

The accompanying drawing shows a simple and inexpensive device for eliminating the reflections for daytime photographing. This consits of two poles that are a little longer than the height of the window. Cut strips a little longer than the window is wide, and sew them together until there is a sheet large enough to reach nearly from the top to the bottom of the glass. Tack the upper corner of this sheet to the top of each of the poles and continue along down the poles, thus forming a large, black screen. A square hole is made in the centre for the camera, and when the photographer is ready to begin operations, have two men hold it as illustrated, thereby shutting off all reflections from across the street or from whatever direction it comes.

In daytime photographing the right time of day must be chosen in order to get the greatest amount of light in the window. Professional photographers usually choose the early morning on a clear day. This, however must be left to the judgment of the man who takes the picture. The length of strips out of which to make the screen can be determined by taking the poles out on the walk and observing how much is necessary to shut out reflections. Black lining cambric or black calico will serve the purpose, and is not expensive.



If the windows are strongly illuminated by artificial light, and the picture taken at night, from 10 to 25 minutes will bring out the greatest amount of detail. People passing on the street will

Construction of Display Stand Used in Vancouver Window.

not interfere with such a picture, unless there is a continual crowd. No one should be allowed to stop between the camera and the window during the exposure. If the store or windows across the street are illuminated, these lights are very apt to reflect on the window pane and result in marring the photograph.

In order to secure a perfect photograph, the show window lighting should at all times be concealed and should be located in the upper part of the window near the window pane. All the shadows on the goods are then clearly defined and this contrast between the high lights and shadows will give a perfect picture. Open lights in the window have a tendency to blur the photo.

Holiday Display Constructed by David Dunwoody, for A. H. Hatch, Vancouver, Last December.

SILVERWARE DISPLAY.

The Peterboro Hardware Co., whose display of silverware is reproduced this week, is fortunate in having large windows in which good displays are frequently made. In the one shown, hollow-ware is featured with two cutlery cabinets in the background. Possibly the most attractive feature of the display is the draping, the silverware being shown

on shelving covered with white cotton, while the connections between the shelves are of black material forming a black background. Then the back is in the form of a fence, covered by white cotton, the gate being surmounted by an arch, on the top of which, is a black star in a white background. The window is not overloaded with goods, nor is the arangement of the articles in any way unique. They stand out neatly on an attractive setting, and make a nice display but, lacking price tickets, the window cannot be considered as likely to sell goods in such quantity as if the prices had been quoted.

SUSPENDED SHELVING IN WINDOWS.

An attractive display made last Christmas, was the window dressed by A. M. Nairn, for Williams Bros., Gladstone, Man., it showing up well in the accompanying illustration with the exception of the base of the window, on which skates, scissors and pocket knives were shown. The camera was set too high to take in this part of the display. Evergreen streamers were used in the upper part, and on the sides of the window, and the words "Merry Christmas" were shown in evergreen above the two arches in which cutlery display rings were hung. Below this plate glass shelves used to display silverware and at the base raised stands supported lamps, carving sets in cases, leaning against the stands. Every article in the window bore a price card, and large cards, made such suggestions as, "How would a lamp do ?"

WELL THOUGHT OUT DISPLAY.

David Dinwoody, in aranging the holiday display for A. H. Hatch, Vancouver, a year ago, planned everything beforehand in a thorough manner, as the accompanying sketch of the shelving used in the base of the window will show. The window is ten feet wide at the back and six feet in front and four shelves, 9 inches in width, were raised above the floor, each six inches above the one below. At the base carvers and table bells were shown, then jardinieres and vases, teapots, shaving sets, etc., and above this, on a maple leaf made of tin, knives, forks and spoons, fruit knives, sugar spoons and nut crackers were displayed, razors and scissors being shown on the stars on either side. Then at the back, air guns and 22 calibre rifles leaned against a background of white cheesecloth, which was relieved by the use of evergreen. Mr. Dinwoody used two sketches in planning the display, one the shelving on the base and the other the lay-out of the background.

To be a great success, every merchant must be a student of human nature—must know how to meet every customer on his own ground.

Sporting Goods During the Holiday Season

Sporting Goods Make Useful Presents as They are not Limited. to the Season—The Selling Points of the Hockey Stick—Merchants Should Educate Customers to the Buying of Higher Grade Goods—Put the Trap Stock in Order, as a Good Trapping Season is Anticipated.

In making his holiday display the merchant would be well advised in giving good prominence to his sporting department. There are many lines here that make most acceptable presents, and the bigger the variety that he can give to his general display the better his chances of making a hit with his customers. Undoubtedly the trend now-a-days amongst sensible people is to give practical gifts, that are useful, and will give the recipient a good deal of healthy pleasure. And in this respect sporting goods could not be improved upon. Take the case of skates for instance. To what a large class of consumers these articles appeal. The fascination of the sport remains undiminished until age or lack of opportunity steps in, and then there is only left a sympathy for those who can still enjoy the greatest of our winter recreations. There is nothing that appeals to the boy and girl, to the young man and young woman, than a handsome pair of skates, and the merchant who pushes this line is very wise.

Then there are snowshoes, skis, toboggans, hockey sticks, dumb bells, exercises, and air guns, all of which can be used by the happy recipient right away. But apart from those lines which are seasonable, there are those articles which can be used at other times, and which are not the less acceptable to the sportsman because they cannot be "broken in" at once, such as fishing rods, rifles, baseball outfits or lacrosse sticks. A present to be acceptable need not be appropriate to the season. A man would rather have a rod than a cigar case, although he could use the latter immediately, if he be an ardent fisherman but a poor smoker. Thus the merchant need not think that his sporting lines are limited at this time. Show most things that the younger generation like, and the hardwareman will be surprised at the result. A specialty could be made of putting monograms upon the gifts. This would, of course, give a more exclusive character to the present.

The Hockey Stick.

Although the various pointers in connection with skates are pretty well known to the average clerk, we doubt whether so much attention has been paid to the article that in so many cases goes with them, we mean the hockey stick, and yet the one needs just as much intelligent selling as the other. Most clerks can dilate upon the merits of the welded and tempered skate as compared with the cheaper one, and can advise upon the shape and best formation, upon the brackets holding the toe and heel plates, etc., to suit certain specific cases, but he is not so well informed upon the best talking points of the hockey stick. Rapid strides have been made in the development of the stick in the past few years to keep apace with the requirements of the game. It is now an evenly balanced article with most of the weight in the handle, just the reverse of the earlier days, and as light as is compatible with the necessary elements of strength. Then again the question of the wood is a great point to be dilated upon. It must be strong, tough, and durable, and combine the necessary element of lightness besides lending itself to a good finish. These are selling points that the clerk should learn. It would help many a sale, for the sportsman is always glad to get good advice upon an article he is buying.

Display of Skates.

A very good display could be made by showing a few earlier skates and hockey sticks, and a similar number of the most modern ones. Here would be a contrast. The old strap skate, and the present hockey flier, and the old hockey club, which used to be fixed up by the player himself to suit his own views after it came from the makers, and the well finished balanced article that is turned out to-day. Such a display, combined with the intelligent talk of a salesman would command great returns. Enough weight is not placed upon selling points by the merchant. Sporting goods above anything else require intelligent selling. A good sportsman is the most easy man to talk to, and he is always prepared to buy a better article than he originally intended, if the advantages of the higher grade article is put to him convincingly.

New Noiseless Firearm.

The attention recently devoted to devices for the purpose of diminishing the report accompanying the discharge of firearms, has brought into notice several inventions for this purpose. It appears that one of the latest systems announced, which was adopted by a French gunsmith requires the use of a special wad in the cartridge and the formation in the gun barrel of a choke somewhat more pronounced than the ordinary full choke. The wad in the cartridge is apparently intended to take the place of the felt. It is made of cork and its contour is covered with helicoidal grooves. In use, this cork wad, acting in the ordinary manner as a piston, drives forward the shot and expels it, somewhat concentrated by the choke, from the muzzle. The cork wad, instead of being drawn out, is expected to stick in the choke. The gases, after being thus literally corked up in the barrel, escaped slowly by the helicoidal grooves. In this way the report is suppressed, the recoil nullified and smoke prevented. After the shot has been fired the cork is left in the muzzle. As the inventor says, it can then easily be removed by pressing it with a stick, the compression which it has undergone in the choke and the subsequent passing of gas through the grooves enabling it to drop down to the breech whence it may be removed with the spent cartridge shell.

Business Methods of Canadian Hardwaremen

Airship Window Display of Christmas Novelties—Useful Presents Becoming More Popular—Encourages Clerks to Read—Practical Method of Displaying Metal Polish—Keep the Delivery Wagon Painted.

AN AIRSHIP WINDOW.

Chatham, Dec. 7.— Santa Claus travelling via airship is the theme of one of a number of interesting Christmas hardware displays being put on by Westman Bros., and of which Ed. Rawlings is the designer. The window represents a house top on Christmas night, the slanting roof rising from front to back of the window, a white cheese-cloth, which covers, not only the roof, but the entire flooring of the window, very neatly representing snow. The red brick chimney — Santa's entrance — is also shown, while a snowfall is represented by bits of cotton batting strung from the top of the window by means of fine threads, while the crescent moon and stars are shown upon the pale blue curtain, which forms the background of the window. Just above the roof is suspended Santa in his airship. The airship, which is more along the lines of a dirigable ballon, is constructed of articles of tinware, the "car" being a large clothes basket suspended by means of clothes line from the ballon itself. In the car sits Santa Claus, with a liberal supply of small Christmas novelties and toys about him, similar articles being sprinkled about the floor of the window. The slanting roof gives good opporunity for a display of cutlery.

Quite an ingenious hunting window is being put on this week by E. C. Brisco, sporting goods dealer. The floor of the window is covered with sod and long grass, interspersed with numerous pine branches, planted to represent small trees. Amid these are scattered "dummy" rabbits. In one corner of the window is a life-size dummy, representing a hunter, seated on the ground, dressed in hunting costume and armed with a rifle. His open cartridge box is on a stump beside him. During the last few days attractiveness has been added by the introduction of a couple of lively brown rabbits. The window is one which has atracted a great deal of notice. A dummy dog accompanies the hunter.

V. L.

USEFUL PRESENTS POPULAR.

Brantford, Dec. 4.—The tendency towards the abandonment of the giving as Christmas "presents" of generally something frivolous and entirely useless, has been felt for some time. This is a good thing for the hardware dealers, for the tendency is to give something useful, and local dealers are stocking up on articles calculated to appeal to sensible persons. What more dainty or useful a gift could be found than a brass or copper chafing dish, or alcohol lamp for heating a cup of coffee without a wasteful expenditure of coal or gas, and with minimum of discomfort?

Turnbull & Cutcliffe, Colborne St., hardware dealers, are booming goods in this line, as well as cutlery of all kinds. Watt & Squire have placed in view in their main silent salesman a fine assortment of gilt clocks, eminently suitable for Christmas gifts.

A. W.

ENCOURAGE CLERKS TO READ.

Fredericton, December 1.—Every merchant should be enthusiastic over the education of his salesmen and salesladies. It is the duty of all to assist them in every way possible, as a Charlottetown hardwareman is doing. He sees that his salesmen read good trade literature and hands them over Hardware and Metal as soon as he has finished with it. He thoroughly believes in an education on trade subjects, and whenever he has the opportunity he takes up such questions with his salesmen, in what might be termed a "miniature convention." To encourage them in their work he frequently adopts their suggestions in his business methods.

BRIGHTEN DELIVERY WAGONS.

Toronto, Dec. 6.—There is no better advertisement a merchant can have than to keep up the appearance of his delivery systems. A hardwareman, for instance, who sells paint, sets a poor example if he does not have his wagon or sleigh nicely painted and lettered. A smart delivery outfit outside the door gives a prosperous appearance to a firm. Now that the winter is approaching, sleighs will soon be used extensively, and if painted and lettered will be a far better advertisement for the hardware store than if a coat of paint has not been applied for a number of years. Get them out now and give the painter a chance to do good work and allow the paint to dry before using.

"CLEANSER" DISPLAYS.

Chatham, Dec. 1.—There are a number of good cleansers on the market, which can be used for cleaning glass, metal articles, etc. Here is a window design which takes but small space and yet clinches the point most effectively. It can be used for one of those little "corner" windows, where there are only a few inches of space each way.

Pile boxes or cakes of the cleanser in the bottom of the window. Then take a metallic article of some kind—a kettle is a good thing—and clean a portion of it till the metal glistens. Put it that way, half cleaned, in the window. Put price tickets on the preparation; also an advertising card with catchy wording, as, for instance, "—— will finish this in five seconds," or, "It feels good to be cleaned with ——."

The half-cleaned kettle is a better advertisement than one entirely cleaned. The contrast makes the work of the cleanser much more effective.

KEEP THE WINDOWS CLEAN.

Moose Jaw, Dec. 9.—Many particular people measure a merchant's importance by his appearance and that of the store. To cater to this class, therefore, the first requirement is to clean windows. While it is seldom a woman purchaser will mention it, she usually notices whether the windows are clean or not. If they are, she will likely take it for granted that the interior is similarly treated. A Moose Jaw hardwareman has definite ideas along this line. "I know it brings trade," he says, "and our entire store is as clean as the windows."

ADVERTISING EXPERIENCS.

Kingston, Dec. 8.—"Advertising in the daily papers is a good investment, provided you have a well-written advertisement, and have mention made in it of the articles for which there is a demand from time to time. Some merchants will leave in the same old advertisement in a paper until a reader gets tired of seeing it. There is no money in an advertisement of this kind. You might just as well not take space in the paper at all," said a successful Kingston hardwareman the other day.

"How about advertising out on the country roads—this is, the tacking up of signs on the posts and fences, and the painting of barns?"

"That kind of advertising is now a thing of the past. Farmers are tired of reading signs on the roads—in fact, they have been looking at them for so long, that I believe that now they hardly see them, that is, to notice what they say."

"One of the very best ways to advertise for the country trade," he added, "is to get out to the country fairs. We have lots of them in the Kingston district, and I have found that it pays. Of course, in the fall of the year, we are always booming our stoves, and I made a number of sales as a result of my visit to the fairs. And the beauty of it was that it was not very expensive. I did not take out the stove with me, for exhibition, but instead, I had some bills printed, setting forth the article I had with the prices, etc., and in this way, I was able to do business. If I could not make a sale, I would at least get them to promise to call at my store, when they came into town, and this gave me another opportunity to show them what I had."

E. G. B.

What the skillful clerk does is to build confidence by qualities that radiate helpfulness, giving clear ideas about the merchandise through an expert knowledge of it, at those points where the customer's mind needs aid to reach a decision.

Arrangements for Hardware Convention at London

List of About Thirty Manufacturers who have Reserved Space for Exhibits at London During the Convention—Rules which are to Govern the Exhibits—Mutual Insurance to be Discussed at the Convention.

Canadian Wholesale Hardware Association—William Starke, Montreal, president; S. H. Alexander, Hamilton, vice-president; W. J. Lawson, S. R. Kennedy, Toronto; A. Jeannotte, Montreal; A. Prudholme, Montreal, and Joseph Lemieux, Quebec, directors; James Hardy, Toronto, secretary-treasurer.

Maritime Wholesale Hardware Association — W. S. Fisher, St. ohn, president; Percy Simmons, Halifax, vice-president; F. R. Murray, St. John, secretary-treasurer.

St. John Hardware Merchants' Association — John A. McAvity, president; W. S. Clark, secretary.

British Columbia Hardware Dealers' Association.—W. C. Stearman, Vancouver, president; H. T. Kirk, New Westminster, vice-president; G. Blakely, New Westminster, H. Martin, Vancouver, and W. R. Owens, Vancouver, executive committee; Wm. J. Butt, Vancouver, secretary-treasurer.

Hardware and Metal Association of British Columbia.—John Boyd, Vancouver, president; J. A. Cunningham, New Westminster, vice-president; John Burns, Vancouver, secretary-treasurer.

Alberta Hardware Merchants' Association—John Drewe, Calgary, president; R. L. Gaetz, Red Deer, first vice-president; J. Dowcett, Edmonton, second vice-president; L. W. Kribs, Frank; C. W. Marshall, Nanton; W. G. Stafford, Lethbridge; A. E. Clemens, Sedgwick, and C. W. Hislop, Carstairs, executive committee; A. T. Linton, Calgary, secretary-treasurer.

Winnipeg Retail Hardware Association. — Charles Mulvey, Winnipeg, chairman; J. E. McRobie, Winnipeg, secretary-treasurer.

Ontario Retail Hardware and Stove Dealers' Association.—D. Brocklebank, Arthur, president; A. Ballantyne, Brantford, first vice-president; M. S. Madole, Napanee, second vice-president; John Caslor, Toronto, treasurer; J. Walton Peart, St. Mary's; D. Cinnamon, Lindsay; R. C. Chown, Belleville; H. P. Morgan, Peterboro; J. S. Weichel, Elmira, and J. R. Hambly, Barrie, executive committee; Weston Wrigley, 10 Front St. E., Toronto, secretary.

Toronto Retail Hardware Association — Samue Pearsall, president; Joseph Harding, secretary.

Ottawa Retail Hardware Association—R. Mulhall president; J. G. Cowan, secretary.

LAYING PLANS EARLY.

A. M. Hunt, secretary of the local committee making arrangements for the entertainment of retail hardwaremen who visit London during the convention next February, reports that plans are being made early to look after from 350 to 400 visitors. He also states that a number of London manufacturers of hardware are already preparing exhibits for the "Made in London" show.

Increased interest is also reported by the secretary of the Ontario Association, he stating that the only difficulty he anticipates is the provision of space for all the manufacturers who desire to exhibit. About thirty spaces have been sold without the issuance of a general circular to manufacturers.

The program mapped out ensures a profitable meeting for all retailers who attend.

LIST OF EXHIBITORS.

The following is a list of manufacturing concerns who have reserved space in the Retail Hardware Association's Exhibition at London up to December 10.

Supreme Heating Co., Welland, ranges.

Thos. Bryan Ltd., London, brushes.

Pittsburg Perfect Fence Co., Hamilton, wire fence.

Oneida Community, Niagara Falls, (two spaces), silverware and hardware.

Brandram-Henderson Co., Montreal, white lead and paints.

Dowswell Mfg. Co., Hamilton, washing machines.

Gendron Mfg. Co., Toronto, woodenware and bathroom fittings.

Wood Specialty Co., St. Marys, woodenware.

Canada Paint Co., Montreal, white lead and paints.

Johns-Manville Co., Toronto, roofing.

Metal Shingle & Siding Co., Preston, (two spaces), metal roofing.

Imperial Varnish & Color Co., Toronto, varnishes and colors.

Gillette Safety Razor Co., Montreal, safety razors.

Bowser Oil Tank Co., Toronto, oil tanks.

Findlay Bros., Carleton Place, Ont., ranges.

Northern Aluminum Co., Toronto, sheets and cooking utensils.

Metallic Roofing Co., Toronto, metal roofing.

F. W. Bird & Co., Hamilton, roofing.

Carborundum Co., Niagara Falls, sharpening stones.

Standard Paint Co., Montreal, roofing.

Lufkin Rule Co., Windsor, measuring devices.

Sherwin-Williams Co., Montreal, paints.

Brantford Roofing Co., Brantford, roofing.

Gurney, Tilden Co., Hamilton, ranges.

Burrow, Stewart & Milne, Hamilton, ranges.

D. Maxwell & Sons, St. Marys, washing machines.

Moffat Stove Co., Weston, ranges.

In addition to the above twenty manufacturers of hardware store fixtures and makers of hardware in the city of London will have exhibits in the "Model Hardware Store" and the "Made in London Hardware Show" in the arcade below the City Hall auditorium, where the Hardware Exhibition is to be held.

RULES OF EXHIBITION.

To ensure equitable treatment to all exhibitors the following rules are made conditions of each agreement to exhibit at the Hardware Exhibition, to be held in the City Hall, London, during the fifth annual convention of the Ontario Retail Hardware and Stove Dealers' Association, Feb. 8, 9, 10 and 11, 1910.

1. All exhibits must be in place by Tuesday noon, Feb. 8. Hall to be open for the placing of displays Monday, 8 a.m. No space to be sublet without consent.

2. Exhibition hall to be open Feb. 8, 9, 10 and 11, from 12 noon to 11 p.m. Hall to be closed during morning sessions of convention.

3. Admittance to exhibition hall to be by badge or pass supplied by Exhibition committee. Public to be admitted Wednesday night on passes issued through London retail hardwaremen.

4. Booths to be enclosed in framework, 7 feet high by Association Committee. Red, white and blue material to be used in separating booths.

5. Exhibitors to provide any stands or shelving required for displays. Chairs can be secured from caretaker. No signs, etc., put up by exhibitors to be over eight feet in height. Hall is well lighted and ventilated.

6. Goods on exhibition are at owner's risk. Packing cases can be stored under cover in rear of hall.

7. Names of cartage companies, carpenters, sign writers, etc., can be secured on request from A. M. Hunt, secretary, local committee, 425 Richmond Street, London.

8. Manufacturers are requested, wherever possible, to have their representatives ask for convention certificates when purchasing railway tickets to London. In this way a single fare rate will be assured both exhibitors and retailers. Write name on certificate and hand to secretary at convention. A fee of 25c is charged by railroads for viseing each certificate.

9. Charge for space in Exhibition Hall is payable in advance. Exhibitors who do not remit by mail before convention must pay treasurer on Tuesday, the first day of the convention. Exhibition business is on a strictly cash basis.

10. All complaints or suggestions regarding this or future exhibitions should be forwarded through a committee of exhibitors. We suggest the formation of such a committee so that exhibitions can be conducted in a manner mutually beneficial to the manufacturers who exhibit and to the members of the association.

WESTON WRIGLEY, Sec.
10 Front St. East, Toronto.

PLAN WHICH INCREASED TRADE.

"The extent to which small suburban retail stores will go to vie with their larger down-town competitors is sometimes quite marked," says an observer in System. "There seems to be a greater desire than ever to please the casual buyer, who cannot find time to go down town.

"The woman proprietor of a little notion shop in the suburb of a large city furnishes a good example of this kind of enterprise. Her stock is rather limited, so that her customers are sometimes unable to get what they desire. In a case of this kind the proprietor lends her personal services to the shopper by leaving the store in charge of a clerk and going downtown in person after the desired goods. This service she gives free of charge, adding to the price of the article the actual carfare spent for the trip.

"Where a shopper is unable to go down town on account of children or lack of time, this kind of service is of great value. The woman proprietor has in this way built up a permanent trade among a large portion of the women in the suburb, and her sales are constantly increasing."

GOOD NEWS FOR TRAVELERS.

Commercial travelers will no doubt be gratified at the announcement of Hon. Mr. Hanna, the Ontario Provincial Secretary, that hotels throughout that province are to be standardised.

If there is one thing which tends to make the life of the commercial traveler miserable it is the condition of many of the hotels in which he is compelled to live. Accommodation in many instances, scarcely deserves the name while sanitary conditions are often vile.

Mr. Hanna says that standardization will be complete by the end of the year and that hotel keepers who do not keep their houses up to the standard will be deprived of their license.

It is to be hoped that the Provincial Secretary will see that the instructions are carried out to the letter of the law. The task will be by no means easy, judging from the indifference which has often characterized hotel keepers in the past in regard to government regulations. The situation demands drastic treatment, and strong and prompt enforcement of the regulations. There must be no winking at infractions of the law. Unfortunately this has been the weakness in the past. It has not been the absence of regulations. It has been the weakness of officials. Possibly stronger regulations may produce stronger officials.

As Mr. Hanna is a man of forceful character we may confidently expect that he will put some of the same qualities into his inspectors.

Commercial travelers can themselves materially assist in the enforcement of the regulations by reporting to the Department any infraction thereof. Their health as well as their comfort demand they should do so.

CANADIAN TRADE GROWING.

Of the several national issues touched upon at the banquet of the Montreal branch of the Canadian Manufacturers' Association none was more significant than the reference made by the Hon. L. P. Brodeur, Minister of Marine and Fisheries, to the great development of the trade in Canada. His remarks in this direction were short. In fact he practically confined himself to figures—but they were figures which were more pregnant with importance than columns of small talk. Mr. Brodeur showed that the manufactured goods of Canada had increased from $221,617,773 in 1871 to $718,352,603 in 1906, the increase from 1901 to 1906 being at the rate of 66 per cent., while the exports of manufactured goods had increased from $4,161,282 in 1888 to $28,507,124 in 1908, more than doubling in the last ten years.

Thus in cold figures can we see for ourselves the signal advancement that that has occurred in those branches of commerce that can alone make a country prosperous and confronted with such figures the extreme pessimist must feel no fears.

And what about the foreign capitalist? No question of sentiment influences him. What he wants is a guarantee that his investment is reasonably protected, and what better protection can he have than these figures. Reports from experts who travel through the country giving glowing accounts as to the evidences of prosperity on every hand, are all very well. But give the foreign investor figures, and he is more satisfied. Just think of it. Exports have more than doubled in the last ten years—a period when the competition of nations was never so severe. Canada is young in the game. She is diffident; she has not yet realized her own strength; and therefore she is handicapped when competing with the older nations. But these figures show the great fight that she is making. They show that her manufacturers have not only nerve, and skill, but they have quality—and it is quality that tells in the long run.

And if we have this signal development in the last ten years, what can we reasonably expect from the next ten years. We are not unduly flaunting our virtues when we say that the eyes of the world are watching our progress with interest, if not with jealousy.

Factories are springing up on every side, foreign capital is flowing in to get a better and safer percentage than it can get elsewhere, and representatives of our great manufacturing houses are penetrating into fresh fields in other climes. Like a gradually awakening octopus our tentacles are spreading across the seas, while at home our progress is even more rapid. Vast railway development is going on, thousands of acres of virgin ground are being broken up yearly by the great stream of immigrants, while with mushroom-like rapidity, factories, mills, furnaces, and machine shops are springing up on every hand. Every class of the world's industries is being tackled, and before long Canada will be practically self contained.

Mr. Brodeur instanced another great industry which Canada can now set herself out to conquer, and that is shipbuilding. When it is considered what shipbuilding means to Great Britain, how it has been one of the great levers which gave to her the world's mastery in trade, it can be understood what a growing shipbuilding industry would mean to Canada. And it is not impossible—in fact there is no reason why it should not be a certainty. As Mr. Brodeur said, with all this development of manufactures, and the improved water routes, the time is most opportune for a revival in the shipbuilding trade, which it must be remembered in the days of the wooden ships had been an important one. Our iron and steel industries have so increased, —do we not "send coals to Newcastle" by supplying the Mother Country with rails and other materials —and our capacity to design and build so developed, that the time for entering the shipbuilding industry had come again. And we must seize the opportunity. Mr. Brodeur said, "a Canadian navy is to be built very soon — why should it not be built in this country?" There is no doubt that such a step would give a great impetus to industries generally, and be of far reaching importance to the commercial strength of the country.

Thus have we on every side evidences of the great prosperity awaiting us. Merchants can go ahead with their everyday's work with confidence. They can plan improvements and developments to their trade secure in the knowledge that their country's prosperity is assured. With what better spirit can any country enter upon a new year than can Canada at the present time?

Get the new thing ahead of the other fellow and make money on them. Frequent change of the arrangement of your show cases gives the effect of new goods received. The same old arrangement, month in and month out, no matter how many new goods, looks like the same old stock.

TRADE PAPER SUPPORTS FIRE INSURANCE MONOPLY.

The Western Canada Trade Gazette, Calgary, published in the interests of the wholesale and retail trade, in its December issue gives its first two pages of reading matter to the Fire Underwriters Association, and the All-Canada Fire Insurance Federation, the two organizations which are endeavoring to amend the Insurance Act adopted by Parliament last winter in such a manner that the Canadian companies will obtain a monopoly of the fire insurance business in Canada.

In other words, the insurance companies want to force all Canadian premium payers to first offer insurance to all licensed companies without regard to the amount they decide to accept or to their record, resources or standing, and upon their own terms and conditions. What this means can be understood when it is remembered that companies transacting 88 p.c. of the fire insurance business, as reported to the Dominion Government, are bound hand and foot by the rates, rules and conditions of the Canadian Fire Underwriters' Association, and it is manifest that the enactment of any such legislation as desired will not only develop the practical monopoly now existing, but will also strengthen and reinforce a combine, which, even as it now stands, is unique in its power and ramifications.

The Trade Gazette in publishing these articles favoring the fire underwriters, without commenting editorially or saying a word regarding the interests of the premium payers, must have done so without realizing that the interests of the manufacturers, wholesalers and retailers are on the side which will make it possible for them to get the maximum of insurance for the minimum of cost, reasonable security, of course, being assured. The Trade Gazette, in its January number, will correct its position and speak in "the interests of the wholesaler and retailer," or mercantile interests in Alberta must consider it as being published in the interests of the fire underwriters combine.

A resolution passed by the Alberta branch of the Fire Insurance Federation is published in the Trade Gazette, and it is stated that the signatures of all fire insurance men in the district are being sought for presentation to M. S. McCarthy, M.P., for Calgary and Senator Lougheed, Calgary, in order that they may present the resolution and signatures in Parliament and Senate.

The Trade Gazette, or some other concern or individual desirous of protecting the interests of wholesalers, retailers and buyers of fire insurance generally, should put in circulation a counter petition to be presented by Mr. McCarthy, M.P., and Senator Lougheed, pointing out that the interests of all premium payers are opposed to the further entrenchment of the insurance combine.

"Because of the combine," says the Committee of Premium Payers of Canada, an organization formed by representative business men in all parts of Canada, including P. Burns, one of Calgary's best known citizens, "rates are excessive and insurance required to reasonably expedite large business transactions cannot be obtained. Necessary and very desirable forms of insurance in the proper conduct of business are not procurable, and on the other hand, conditions are imposed by the Licensed Companies which are not required by other offices, and the operation of which entail additional burdens upon the Premium Payers of Canada. Other insurance than can be obtained in Canada is therefore most desirable, and in many cases, absolutely essential, and the Premium Payers want the Insurance Act to provide the means whereby the right of private contract outside of Canada, now an inalienable right of the citizen, may be carried out, and the co-incident requirements of inspection and adjustment of losses within Canada not interfered with. The Premium Payers do not wish the Insurance Act to lower the bars whereby unlicensed insurance companies would be permitted to canvass or solicit business in Canada, to advertise or open offices in the country, but they strongly protest against any legislation which will restrict their right of contract, by imposing penalties on the individuals who will perform in Canada, the acts incident to that contract, as for example, the inspection of a risk or adjustment of a loss."

Hardware and Metal again urges manufacturers, wholesalers and retailers to write the M. P. and Senator representing their district, urging them to protect the interests of the vast number of insurance buyers. Petitions signed by the retail merchants in each town or city, or endorsed by the various Boards of Trade throughout the country should also be sent to the local M. P. and Senator for presentation when the matter comes up in the Senate after the Christmas holidays.

Any readers who desire further information as to the operations of the insurance laws as they affect premium payers can be informed by writing the secretary of the Committee of Premium Payers of Canada, 113 Board of Trade Building, Montreal.

PRACTICAL SELLING SUGGESTION.

An evidence of the good results of Ontario hardware merchants meeting together and discussing trade matters is the suggestion given by Russel C. Chown, a member of the executive of the Ontario Retail Hardware and Stove Dealers' Association, in the following letter:

Editor Hardware and Metal,—At the present time the ruling price on ordinary 7-inch stove pipes throughout Ontario is 10 cents per length. Stove dealers as a general rule sell taper stove pipes which fit the collar of a range or heater at the same price, but as these pipes are generally made up in different sizes one at a time, they cost considerably more than the ordinary stove pipe.

Dealers, if they stop to figure the cost of iron and the time of making, will find they are selling them at a loss when selling at 10 cents per length.

The Tinware Association's price on these taper pipes to retail trade is $1.50 per doz. or 12½c each, so it is readily seen that they realize they cost more than the ordinary stove pipe. We have advanced our price this year to 15c each, and we have had no trouble in getting this as our customers know they are a special pipe and expect to pay a little extra for them.

My desire in writing this letter is that other dealers will advance their price on this line, so that they may feel satisfied that they are selling taper pipes at a fair price when selling them at 15c each.

Mr. Chown's suggestion is timely and should be generally adopted as every article sold should carry a fair profit in order to cover the cost of the article and the general cost of doing business.

Too many merchants take the cost price of an article and feel that in adding ten per cent. to the cost they are making that margin of profit. Then they wonder at the end of the year why they are not able to show a balance to the good. To ensure a profit a percentage must be added to the selling, not the cost price, the cost being the invoice price plus the average percent. it costs to do business, paying rent on the building interest on capital invested, salary to merchant, wages and general expenses.

Hardware and Metal will gladly give space to similar suggestions or to comments by readers on Mr. Chown's suggestion.

The man who "gets there" is not always the one with the most brains, but the one who knows how to use what he's got.

CANADIAN METAL MARKETS

See Itemized Market Quotations on Page 66.

MARKETS IN BRIEF.

Montreal.

Tin—Advance of ½c.
Sheet Zinc—Advance of 50c.

Toronto.

White Lead—Up 10c.
Tin—Advanc of ½c to 1c.
Sheets and Plates—1910 prices up 10c.

MONTREAL.

December 10.—With the big jump in tin in the primary markets during the week, local prices advanced ½c and average jobbing lots could only be obtained at 34c. Sheet zin made its long anticipated advance, and 5-cwt casks were quoted at $6.75 and part casks at $7. No other changes were made, although the tone of the markets reflecting the general conditions outside has been firm. There seems to be a feeling that the markets are in for a period of stiffer prices all the way round.

Trade generally has undoubtedly fallen off, but for December it is very good, in fact, better than last year. Fair orders for tin and copper were received, and the stiffening in tin stimulated inquiry. Great interest continues to be taken in the copper situation, and the manipulation across the border is watched carefully. Heavy buying would follow any decided increase of strength to the markets. Lead is about the same, the market continuing without any special feature. There is no let-up in the pressure on Canadian iron furnaces. New business continues good, while the difficulty in clearing off old contracts is as great as ever. For the present imported trade is quiet, but users are already figuring on paying the extra winter freights owing to the inroads being made on their stocks.

All the way round stocks are not heavy, and prospects look healthy for steady business, while if the primary markets take a turn for the better and show pronounced stability, much more business would be stimulated.

PIG IRON—Canadian furnaces seem to be getting more behind hand than ever with old business, and there is little falling off in new orders. The output is mortgaged for months ahead, and users are figuring on providing for requirements for the whole of next year, so as to be on the safe side as much as possible. Prices are firm, ordinary foundry grades at furnaces commanding $20.50 and best steel iron, $21.50. Ex-store prices are now demanded for imported pig and inroads are already being made on the stocks. It is anticipated that winter freights will have to be paid by users as they see a short life to the stocks that they laid in during the last days of navigation. We quote: Summerlee, soft, $20.50; Selected, $21; No. 1, $21.50. Middlesboro, $19.50. Conditions in the Old Country are quiet, and although prices are being well held, especially Scotch grades, business is not so good as it might be. While new business in the States continues to get quieter. Deliveries on old contracts are more behind hand than ever. There is good buying on finished products, and mills are careful to see that orders are not taken in excess of consumers' requirements.

TIN—With the strong jump taken by the English market during the week, local prices were advanced ½c, and fair orders were taken at 34c. Business has undoubtedly fallen off since the close of navigation but it is still very good. Inquiries have been fair, stimulated no doubt by the advance in quotations.

COPPER—Copper is unchanged from last week, although slightly firmer in sympathy with New York. Business is quieter than it was, but is still above that done at the corresponding time last year. The trend of events in New York is being carefully watched, and the first sign of any decided change in the situation by any agreement between the producers would cause much stronger buying. But for lack of confidence in the gardmetal, buying would be much better now. Very little stocks are being carried and any strong advance in prices would place users in an awkward position. While awaiting developments regarding the merger and the trust laws, the markets have been showing some reaction from the free buying lately in evidence, but all the same the general tone has been firmer.

SPELTER—The spelter market continues very firm, in sympathy with the strong primary markets. No change in prices are announced although an advance seems likely. Business is fair, but like the other metals reflects the closing of navigation. As anticipated sheet zinc has been advanced 50c. There is no check to the strong control on spelter both in London and St. Louis, and prices are well maintained.

LEAD—Imported and domestic lead is unchanged. Trade is moderately good. The English market seems to be losing ground again. Lead, like copper, is suffering from too much metal in sight.

SCRAP—The market is unchanged, with buying a little freer. We quote: Heavy copper and wire, 11c; light copper bottoms, 10c; heavy red brass, 10c; heavy yellow brass, 8c; light brass, 6½c; tea lead, 2¼; heavy lead, 2¾c; scrap zinc, 3c; No. 1 wrought iron, 12c; machinery cast, malleable, $9; miscellaneous steel, $7.00.

TORONTO.

December 10.—While the metal business in the east, across the border, and in England is reported to show a lessening of demand, in Toronto the market continues to show briskness, and the passing week is good and fully equal to any recent week. There is more firmness shown, too. The close of navigation both on the lakes and in the St. Lawrence has naturally increased the freight rates, and this has made for a likelihood of higher prices. Iron and steeel are strong, though quotations are unchanged; tin has gone up from ½ to 1c; and sheets for 1910 are quoted at an advance of 10 cents a hundred. The other metals show no changes, but buying is as strong as ever.

PIG IRON—Foundrymen just now are in an independent position. Buying seems to be as heavy as ever, at least buyers are as numerous as ever. Outside consumers, however, are said to have let up somewhat, which has allowed the iron men to take a slight breathing spell. Stocks are exceedingly low and orders at present on hand are sufficient to take everything in sight. There is ample business in sight to keep the furnaces running at capacity during the winter. The larger users have fairly large supplies. Prices while firmer are unchanged from last issue. Some new imported irons are offered. Glengarnock is $23.50; No. 2 Summerlee is $23; Canadian foundry is $22; Cleveland, No. 1 and Jarrow is $21.75; and Middlesboro' No. 3 and Clarence is $21.

TIN—This metal is higher this week both locally and abroad. The market seems to be reaching out for the high spots. The local price is now 33c to 33½c for quantities, and advance of from ½ to 1c from 32½c, last week's quotation. Demand is splendid and present buying shows decided improvement over the beginning of December.

SHEETS AND PLATES—Still active trading is being done at unchanged quotations. There has been some fluctuation in galvanized sheets, but the new figures for 1910 has made the situation stronger, with a consequent elimination of cutting. Next year's figures show an advance of 10 cents a hundred over current quotations.

LEAD—Increasing sales during the week has tended to make lead prices firmer, and while quotations are unchanged it is easier to obtain the prices now ruling than for some few weeks. Imported lead is at $3.65 and Trail is at $3.55.

SPELTER—Foreign spelter at $6 and U.S. at $8 to $8.50 continue to be the ruling prices of spelter. Demand is as active and steady as has been the case all fall. Sheet zinc in 5-cwt casks is at $6.75, and part casks, $7.

COPPER—The red metal situation is rather improved since a week ago. It is firm in price at 14c for casting and 14½c for lake ingots. Consumption is proceeding at an increasing rate, but production is yet enormously high.

OLD MATERIAL—As with the newer metals, scrap makes a good showing this week from a business point of view.

Prices, though, are unchanged. Heavy copper wire is 12c; copper bottoms, 11c; heavy red brass, 10½c; heavy yellow brass, 8½c; light brass, 6½c; tea lead, 2½c; heavy lead, 3c; scrap zinc, 3¾c; No. 1 wrought iron, $11; machinery cast scrap, No. 1, $15 to $16; stove plate, $13; malleable and steel, $8; old rubber, 9c.

HARDWARE MARKETS

MONTREAL.

December 10.—There has been a good healthy movement in all lines during the week, and the aggregate volume of business has been much greater than that done at the same time last year. While cutlery and silverware, skates and hockey sticks seem to predominate, there is a good general assorted trade moving

The weather has not been in favor of the country trade. Owing to the lack of snow sleighing has been bad, and this has kept the farmers confined to their farms. On the other hand the mild weather has helped the builders, and in consequence builders' hardware has been selling well. Sporting goods, especially skates, hockey sticks and snowshoes are in strong call, and a shortage in skates seems pretty well assured. A new list price on loaded shells is to be issued.

Booking is still quiet, little moving except green wire cloth and screen doors and some poultry netting. A good tone, however, is reported on every side, and it is expected that when once the holiday trade is over, the travelers are on the road again that very heavy business will follow. There is no doubt that stocks in dealers' hands are very light indeed.

BUILDERS' HARDWARE—The open weather has greatly encouraged building operations, and many houses are in advance of anticipations. The uninterrupted building has naturally been reflected in the demand for builders' hardware, and good trade is reported during the week. No price changes are announced, and we quote: Lock sets (inside) $4 per doz. and up; lock sets (outside) $13.20 and up; common rim locks, $1.10 per doz.; porcelain knobs, $1.10 per doz.; sash cords, 32½c to 33c.

WINTER LINES—The open weather must have undoubtedly affected trade, many of the country roads being in a bad state for sleighing, but all the same the volume of business moving is very satisfactory, in fact, much better than for the same week last year. Booking is on the quiet side, practically the only movement being in green wire cloth, screen doors, and poultry netting. General assorted lines are, however, moving well for immediate delivery, and there has been a steady call for sleigh heaters, sleigh bells, weather strip and horse blankets. Enamelware is in good demand, and the Northwest continues to buy well. Tinware is also in strong request at generally unchanged prices.

CUTLERY AND SILVERWARE—There is no cessation in the demand for cutlery and silverware, and jobbers are very satisfied with the trade so far. Some repeat orders have already made their appearance, showing that the holiday demand has commenced in many districts. The following lines continue to be the strongest movers, carvers in cases, display cases of table cutlery, coffee spoons, berry spoons, pickle frames, tea and coffee pots, and cut glass.

SPORTING GOODS—The call on skates is undiminished, and a shortage seems to be almost certain. Great inroads, too, have been made upon stocks of hockey sticks. A steady call is noticed for snowshoes, toboggans, and sleds. A new list price for loaded shells is to be issued. Home exercisers and developers, pucks, and straps are also in good call.

MINERS' SUPPLIES—There is a fair demand from Cobalt and other districts, and the market is unchanged. We quote. Miners' picks, 16½c a pound; prospectors' hammers, 16½c; pick handles, $1.85 a dozen; drilling hammers, 6c a pound; crowbars, 3½c; drill steel, 8c.

BOLTS AND NUTS—Buying is very good. The market is firm with supplies in good shape. No changes are announced, and we quote: Discounts on carriage bolts, ⅜ and smaller, 70; machine bolts, ⅜ and less, 60, 10 and 10; coach screws, 75; stove bolts, 80 and 7½.

NAILS—There is a good buying movement in evidence, and the shortage is not unexpected. No changes are reported, and we quote: Wire nails, $2.35; cut nails, $2.40.

LUMBERMEN'S SUPPLIES—Very satisfactory orders were received during the week, and the season is now well on its way. Prices are firm, and unchanged. We quote: Cant hooks, $12 a dozen and up; axes, $6.50 a dozen and up, axe handles, $1.15 and up; cross-cut saws (inferior) 25c per foot and up; better grades, 43c per foot and up; axe wedges, 25c a dozen and up.

WIRE—Wire lines are quiet except for a movement in plain wire and staples. There is some booking in poultry netting. We quote: Barb wire, car lots, mixed, $2.50; small lots, $2.55; plain twist, car lots, $2.80; small, $2.85. Galvanized wire, No. 9, $2.25 in straight and mixed car lots, and $2.30 small lots, f.o.b., Montreal. Coiled spring fencing. $2.30; straight and mixed car lots, and $2.35 small lots. Plain wire, bright, annealed and annealed and oiled, $2.35 base. Staples, bright, $2.60; galvanized, $2.85.

TORONTO.

December 10.—The Christmas rush is on with a vengeance, and every hardware jobber states he is pressed to the limit in filling orders. The business done so far this season exceeds that done during the same period last year by about 15 per cent. The quality of the goods moving is also superior. Cutlery and silverware are the principal sellers, but sleighs, iron toys and skates and games are good sellers. The weather has not been very Christmassy so far, but hardwaremen report a satisfactory inquiry.

Builders' hardware continues active, the open season helping on not only the older work, but giving a chance for the commencement of new jobs. All prices are firm,—not a weak spot being at all noticeable. In wire, buying just now is light, but to show the strong position of this line an advance of $2 a ton was made on mattress wire this week. This, of course, does not affect the hardware trade, but it indicates the way of the wind.

WINTER LINES—Satisfactory orders are being received from country points for winter hardware lines. As yet staple shelf goods have the call, but judging from inquiry and some recent sales, sleigh bells will be good sellers this winter. Some first-class lines are offered both in the old patterns and in some new designs. Poultry netting and green wire cloth are yet being booked, but it cannot be said that the quantities placed are very large. The booking season on the whole, however, has been a good one. Snow shovels and sleigh utensils are in fine demand, though few of the centres report as yet any snowstorms of consequence. Some agricultural tools went out this week, but in small lots. Stable supplies, blankets and lanterns had a good week. Lamps and supplies are in fair demand.

BUILDERS' HARDWARE—Especially in the larger centres building continues, and not only are the old contracts being pushed, but new jobs are coming forward all the time. If the open weather keeps up there will be a demand for this line all during the winter. Orders are not now so far behind as they were, but there is sufficient doing to keep hardwaremen busy all their time. Prices are firm and unchanged. Canadian locks and keys are at 45 and 10 per cent.

HOUSEHOLD GOODS—The present is a good season for enamelware. In the city and in the province generally, the Christmas season apparently has made a demand for a variety of enamelled cooking dishes. Tinware, particularly pails and dippers, have gone to the north country in goodly quantity. Kitchenware has been fair, and some of the better grades of housecleaning articles have gone out in satisfactory orders.

SPORTING GOODS—The sale of skates keeps up. That section of Ontario east of Toronto is buying in larger quantities than during recent years, and

demand from the sections north of the city are fully equal to last year at any rate. English exchanges report a better demand for skates over there this season, with a consequent scarcity in sight. Out here some dealers anticipate a similar condition. This will not be an unmixed evil, however, as a number of both jobbers and hardwaremen say they have carried over skate stocks during the past three years. Hockey sticks and supplies and indoor exercisers are selling well just now to clubs and for Christmas presents.

CHRISTMAS GOODS — This is the bright particular line of the week. While it cannot be said that repeat orders are coming in freely, the primary orders are of a good character, both as to amount and quality. Iron toys, dolls' carriages and sleds for children are having a splendid sale, as also are cutlery in individual form and in sets. Silverware, brassware and cut glass are being handled by more hardwaremen this year, but they have not yet become a general hardware line. Table bells, fancy lamps, and a great variety of useful articles in fancy packages are moving. The week's sales have been splendid.

HEAVY GOODS — Cut nails and screws are moving in capacity volume; and iron pipe and bars, too, are very active. Structural steel is at top notch. Nuts and bolts are satisfactory; and wire while moving slower is firm in price.

U.S. METAL MARKET.

Cleveland, O., December 9.—The Iron Trade Review says: As the year draws to a close, the customary slowing up of buying activity in the iron and steel market is to be noted. With the time for inventory-taking at hand, consumers are not showing any especial interest in the closing of additional requirement contracts and the volume of new business being offered is comparatively light when contrasted with the recent heavy buying that has featured the situation.

Despite the decreased activity on the contracting side of the market, there appears to be little falling off in specifications in finished lines of sheets, tin plate, steel bars, shapes and plates. The holders of low-priced contracts expiring Jan. 1 which were made early in the year, or extended through previous arrangements, continue to order heavily against these tonnages on makers' books. The mills are holding buyers to the strict letter of these obligations and are requiring specifications within the time limit, although, because of the congested condition of operations, the deliveries will necessarily be extended subject to the convenience of the manufacturer.

The pig iron market is devoid of interest with scarcely enough new business going to clearly establish the relative strength of prices in some grades.

U.S. IRON MARKET.

New York, December 9.—The Iron Age says: Pig iron production is now at the rate of 31,600,000 tons a year, as against 31,000,000 tons a month ago. The blast furnaces produced 2,547,503 tons in November, a 30-day month, against 2,599,541 tons in October. Steel works furnaces fell off while merchant furnaces made a considerable gain. Returns from Lake Superior ore docks show total water shipments of iron ore of 41,684,000 tons this season; 25,427,000 tons moved last year. This year's movement was 400,000 tons more than the record total of 1907, though the Steel Corporation, on account of the vesselmen's strike, shipped 1,000,000 less this lear than in 1907. The pig iron market is quieter and in Southern iron lower prices are being named for delivery in the first quarter of next year. Basic and foundry irons are weaker in the Central West. Partial reports of pig iron stocks indicate that production has about overtaken consumption. Among new rail orders is one for 25,000 tons for the Harriman lines. In finished material the chief development is the rush of specifications on low priced contracts which terminate with December.

The new Quebec bridge, which will take 50,000 to 60,000 tons of steel, is up for bids. While the steel will probably be furnished by American mills, domestic fabricators are barred by a 35 per cent. duty. On the New York Municipal Building a 25,000-ton contract, bids are to go in soon, but, owing to the long delivery period and the possibilities of price advances meantime, steel manufacturers are not eager to compete.

HARDWARE TRADE GOSSIP

Ontario.

J. H. Young has been appointed salesman in Toronto for the Dunlop Tire & Rubber Goods Co., Toronto.

Mrs. Shore, wife of Thomas Shore, hardwareman, of 115 Rideau Street, Ottawa, died last week in Winnipeg.

Fire did damage estimated at about $8,000, in the premises of McGregor & Reid, plumbers and electric supplies, at Peterboro on Tuesday.

The Dominion Nail & Tack Co., Galt, have moved into their new factory. Wire nails and drawn market wire will likely be made by the company in the near future.

Wm. G. Ballantyne, salesman in the Toronto office of the Sherwin-Williams Co., has gone on the road, in Western Ontario for that concern for the remainder of the winter.

Joseph Lea, general manager of the Canadian Ornamental Iron Works, Toronto, died after a few hours' illness last week at London, England, whither he was attending the consecration of his son as a bishop in Japan. The remains were buried at Birmingham.

The Morrisburg Tack & Mfg. Co. is now a fully organized concern, with Wm. Eager, president; Irwin Hilliard, secretary, George N. Hickey, treasurer, and C. B. Russell, manager. These officers were chosen at a meeting held last week. The company is capitalized at $40,000.

Quebec Gossip.

Joseph Dion, Lake Megantic, Que., has been on a business trip to Montreal.

L. P. Beaulne, Hawkesbury, Ont., has been on a visit to Montreal.

J. L. W. Dessert, tinsmith, St. Guillaume D'Upton, has assigned.

A Lemieux, Henryville, Que., has been staying in Montreal for business purposes.

H. Trudeau, St. Lambert, Que., has been a caller on the Montreal hardware trade.

Henry Coursolle, Avoca, Que., has been calling on the Montreal hardware trade.

Curators have been appointed for the hardware business of J. A. Dansereau, Montreal.

Wm. M. Chamberlin, of the Wright Manufacturing Co., Detroit, whose agents are Darling Bros., Montreal, has been on a visit to Canadian headquarters.

H. S. Cooper, who has just concluded 50 years of service with the Robert Mitchell Co., Montreal, and placed on the superannuation roll, has been presented with a purse of gold, by his fellow workmen.

The D'Israeli Asbestos Co., Que., have placed a contract for locomotives and cars in New York, necessary for their railroad. The equipment is expected in February, when everything will be ready for starting operations.

T. H. Jordan, of A. C. Leslie & Co., Montreal, has returned from a two-months' visit to Western Canadian points and Detroit. Mr. Jordan says that trade is very good in the States, and prospects generally look very healthy indeed.

The Thomas Davidson Co., Montreal, have purchased a block of property adjacent to the works and will extend their plant. The land is at present occupied by dwelling houses, and the price paid was in the neighborhood of $15,000.

Lacroix & Leger, hardware merchants, Montreal, have taken out letters of incorporation, as a limited company, to deal with the manufacture and sale of general hardware lines, paints, and general merchandise. The company is to be known as Lacroix & Leger, Limited, and has a capital stock of $99,500 divided into 995 shares of $100 each.

The Bedford Stove Co. are making extensive improvements to their buildings and manufacturing works at Bedford, Que. They have moved their offices and store rooms into their recently acquired property across the street, which have been fitted up for the purpose, and are remodelling the former offices into a tinshop and show rooms.

H. K. S. Hemming, of the Auto-Strop Safety Razor Co., Montreal, recently delivered a speech at the banquet of the Montreal Manufacturing Jewelers, to the toast of the "maiufacturing interests of Canada." He pointed out that export trade was the only relief apart from the growth of the country in the fierce competition of the manufacturers, and they were neglecting that relief. Mr. Hemming advocated free trade within a protected empire. "Just as we have free trade between our nine provinces and our seven millions of people, we should have free trade between ninety-nine provinces and between hundreds of millions of people. Would you be afraid of your brother manufacturers in England under these circumstances? Do you not think with his market to himself he would have enough to do to mind his own business without cutting into yours?"

Western Canada.

A. M. Campbell, of Campbell & Titsworth, general store, Lacombe, Alta., has purchased his partner's interest in the business.

Stewart & Smirle, hardwaremen and implement dealers, Rosenfeld, Man., have sold the implement department of their business.

TWO TOWNS, SAME NAME.

In Hardware and Metal of December 4, an item published in the Ontario items stated that D. S. Moore, Oakville, had sold his business to Anderson Bros. An error was made in publishing under Ontario rather than Manitoba news, it being copied from Bradstreet's reports. The sale, of course, has no reference to the business of H. E. Moore, Oakville, Ont., who has no thought of selling his business.

ABOUT WINDOW DISPLAYS.

The window display illustration credited to Adamson & Sproule, Orangeville, in Hardware and Metal last week should have been credited to George McDaniel, of the Orillia Hardware Co., Orillia. The display was very creditable to Mr. McDaniel.

Competitors in Hardware and Metal's Holiday Window Competition are requested to state under what conditions the photos sent in were taken. This will assist in giving advice as to which method give the best results.

Doner Bros., Stayner, recently had a hunting scene in their display in which a miniature log cabin with doors and windows were inserted. Small pine trees surrounded the cabin, the head of a deer being seen in the shrubbery.

INCREASE IN MINERAL OUTPUT.

Acording to returns made by the Provincial Bureau of Mines, the output of the metalliferous mines and works of Ontario, for the nine months ending September 30, 1909, was as follows:—Gold, 1,125 ounces, valued at $18,926; silver, 18,751,549 ounces, $9,385,600; cobalt, 427 tons, $79,450; arsenic, 780 tons, $39,221; copper, 5,583 tons, $740,677; nickel, 8,912 tons, $1,921,363; iron ore, 205,262 tons, $473,770; pig iron, 294,698 tons, $4,095,735; zince ore, 785 tons, $8,000. The gross production amounted to $16,762,742, as compared with $12,185,511 for the first nine months of 1908.

From the mines of Coba't there were shipped in all 22,218 tons, of which 20,340 tons were ore and 1,878 tons concentrates, as against 16,855 tons of ore and 480 tons of concentrates during the same period in 1908. The silver contents of the shipments for this year exceeded those of last year by 6,170,039 ounces.

The output of nickel was 1,162 tons more and of copper 309 tons less than during the corresponding period of last year. There was an increase in iron ore of 39,174 tons, and in pig iron of 105,411 tons.

THE CEMENT SITUATION.

The recent merger of a dozen of the larger cement companies of the Dominion into the Canada Cement Co., has been provocative of much discussion. One of the points on which issue has been taken, is the impression that a fairly large dividend has been offered as a bait to sell the stock of the $30,000,000 concern.

The annual output of the merger's nine mills is set down at 4,500,000 barrels. Last year 3,495,961 barrels were produced in the whole country, and in addition 469,049 barrels were imported. Of this amount but 2,665,289 barrels were sold. If these figures are accurate, then there must be some heavy stocks. The United States is also said to have had at the end of 1908 a surplus of some 10,000,000 barrels.

The cost of production is said to be about 80 cents a barrel, but sales are said to have been made this season in Toronto, at 98 cents, and according to rumor, 90 cents. At other points $1.04 and $1.08 were the low prices. Merger men aver that new companies entering the field cut the life out of the business and competitors were forced to meet the cut. Imports from abroad were almost nil, except in some specially freight favored districts.

Portland cement was first made in Canada in 1887, and since 1897 there has been a gradual decrease in price from around $2 a barrel to about $1.15 this year. The City of Toronto paid $1.28 for cement in 1909, bought under contract a year ago, when this year's conditions could not be foreseen. At present the price is $1.40 a barrel, and next year's price quoted to Toronto, is placed at $1.56, about the same price as ruled in 1907.

An advance of 20 cents was expected for next year, but it is now believed that the increase will be between 25 and 30 cents a barrel. Beyond that it seems unlikely to advance, owing to the competition of the independent cement mills, with an annual capacity of 2,500,000 barrels.

Minister of Finance Fielding has also stated that should there be complaints of exorbitant cement prices, because of the merger, the Government will step in and investigate.

McCLARY'S MONTREAL MANAGER.

The McClary Manufacturing Co. have announced the appointment of J. C. Newman, as manager of their Montreal branch, which includes a large manufacturing plant as well as the St. Paul Street warehouse. Mr. Newman, is only 31 years of age, and is therefore a young man for a position of such responsibility. He entered the service of the company in 1893, and remained with it until January of this year, when he became treasurer of the Montreal branch of the Union Mutual Insurance Co., of Portland. The death of Mr. A. A. Brown, local manager for the McClary Co., in August last, created the vacancy which has now been filled, Mr. Newman is a son of T. H. Newman, of Caverhill, Learmont & Co.

HARDWARE PATENTS.

The following is a list of Canadian Patents granted by the Canadian Patent Office on November 9, 1909, relating to hardware and metal, and furnished by Fetherstonhaugh & Co., Ottawa.

121698. J. S. Conrade, Belvedere, Eng.; lock nut devices.

121699. B. H. Montgomery, W. A. Gray, A. Simeon, Toronto; hose reels.

121709. R. Conrader, Erie, Pa.; pumps.

121714. M. Dixon, Pittsburg; ratchet pipe threaders.

121718. R. Feola, New York City; locks.

121723. J. R. Hamilton, St. John, N. B.; combination tools and utensils.

121724. C. H. Hanshue, Beloit, Wis.; stove pipe cutters.

121730. D. J. Higginbotham, Rialto, Fla.; nut locks.

121733. J. Ingells, Muskegon, Mich.; hand clamps.

121735. R. C. Johnston Fort Benton, Montana; combination tools.

121741. I. H. Kinch, Baker City, Ore.; oil cans.

121761. A. M. Parker, Los Angeles, Cal.; sawing awls.

121775. W. L. Sebring, Colorado, Springs, Colo.; seal locks.

121777. P. E. Shortt, Pulaski, Va.; combination tools.

121801. W. Atkins, St. John, N. B.; nut locks and bolts.

Trade News from the Atlantic to the Pacific

Kingston's Good Building Record—Lloyd Harris, M.P., to Introduce Bill to Encourage Formation of Co-operative Companies—Building at Victoria, B.C., Shows an Increase of 56 Per Cent. Over 1908—Seven Millions of New Buildings at Vancouver.

ST. JOHN, N.B.

December 8.—At the annual meeting of the St. John Board of Trade, held on Monday, T. H. Estabrooks was elected president. James Pender gave a very interesting account of his trip to Australia, where he attended the seventh Congress of Chambers of Commerce of the Empire.

The retail hardware dealers are now engaged in making special displays of fancy goods for the holiday trade, and all indications point to a good season's business.

William Heans, for many years in the employ of T. McAvity & Sons, as bookkeeper in their retail office, has accepted the position of accountant in the Enterprise Foundry Co., Sackville, and will enter on his new duties in January. He succeeds A. E. Jubien, who recently resigned to start a brokerage business.

W. E. H.

HALIFAX.

Dec. 6.—The hardware stores of Halifax are now putting on their best displays for the Christmas trade. Fine cutlery is being brought to the front and is being shown in most of the windows of the stores. In fact all fine seasonable lines are being shown. So far none of the stores have made any special attempt to make attractive window displays for the holiday season, that is anything out of the ordinary.

Some of the dealers report that there is an increasing demand for a better class of cutlery than there was some years ago. This is not confined to any particular class of customers, but it appears to be general. The hardware stores of Halifax have always carried good stocks of first class cutlery, and therefore they are able to meet all the requirements of the trade. Despite the fact that the weather is most unseasonable, and that the roads are in a bad state for travel, business on the whole is quite satisfactory and the outlook is favorable for further improvement. Builders' hardware is in good demand, and the sales are reported to be quite heavy for the season of the year. Sheet iron, horse shoes, bar iron and roofing materials are selling quite freely.

The stove dealers say that they are still rushed with business, and that they are finding difficulty in keeping up with the orders that they have on hand. The plumbers also report business in good volume, principally contract work.

J. H.

KINGSTON.

December 7.—Nearly half a million dollars worth of building construction has been undertaken in this city, during the year, 1909. The records go to show that up to December 1, 106 permits for new buildings were taken out. The cost of construction is estimated as follows: New buildings $375,000; rebuilding, $50,500; porches, additions, etc., $22,195; total, $447,695.

R. E. Cushman, representing the Canadian Lead Mining and Smelting Company, has asked the city council for the lowest cash price the city will make for a smelter site. If the price is satisfactory, and exemption from taxes for ten years is given, the company will guarantee to erect on the site, a smelter, and have it in operation in eighteen months after the property is purchased.

John McKelvey, hardwareman, is one of the members of the newly organized company, which has just been granted a lease of the government dry dock here, for twenty years, at a rental of $10,000 per year. The other members of the company are: Alexander McDougall, Duluth, Minn.; Horace B. Smith, Owen Sound; Simon Dyment, Barrie; James M. Smith, Collingwood; Hiram A. Cahin, and W. J. Fair, Kingston. It is expected that within two or three years, 300 men will be employed. At least $50,000 will be spent by next summer, and in a couple of years the company will have a plant worth $150,000.

E. G. B.

BRANTFORD.

December 7.—The Goold, Shapley & Muir Co., which has decided to erect a large new machine shop on Wellington street, will enlarge the capacity of the plant for traction engines, and 60 horsepower engines, it is stated, will be built by the firm.

Port Colborne council has passed a transient traders' by-law, making itinerant peddlers pay a heavy license.

J. B. Holt has taken out a permit for an addition to his store. Other permits include, Sarah E. Murray, dwelling, $1,000; John Grantham, dwelling, $1,200. The Grandview school trusteees will erect an addition to the present school next spring at a cost of $5,000.

The Cockshutt Plow Co. has received an order for 15 carloads of plows to be delivered to points in the Western States by next spring. To cope with this, and other big orders, an immediate enlargement of the plant will be made, to include a 100-foot extension to the moulding shop, and a 100-foot extension to the iron storage room. These are but preliminaries, it is stated, to a building program for next year, to cost $100,000. It is also stated that the Frost & Wood Co., Smith's Falls, may come to Brantford, owing to the recent selling arrangements entered into with the Cockshutt Co., which may result in a merger.

At the annual meeting of the shareholders of the Ontario Portland Cement Co., held here on Wednesday last, the condition of the officers of the company received warm congratulations. Despite many published reports that they had entered the recent combine, they will remain as an independent concern. The officers elected were: President, E. L. Goold; vice-president, W. S. Wisner; John A. Colter, manager; S. H. J. Reid, secretary; A. A. Barrett, treasurer.

The first range manufactured by the new stove firm, The Stanford Steel Range Co., is on exhibition in Howie & Teely's window, and is attracting considerable attention.

Speaking at the Liberal Club on Saturday. Lloyd Harris, M.P. for Brantford, stated that he was preparing a bill which was meant to provide machinery for the incorporation and supervision of co-operative societies. He believed that he had a model bill which supplied the necessary machinery. If a gozen men wish to band themselves together for trade purposes, there was no reason why they should not be able to do so without unnecessary expense. The proposed bill was in the interests of a great many people who had every right to run societies of a co-operative nature, he said. In the past there had been considerable opposition to the provision of adequate machinery for such purpose.

A. W.

OWEN SOUND.

December 6.—The steamer "Acadian" last week left the "Sun" Cement Works with 3,300 tons of cement, the largest load that has left port this season for the Canadian west. The "Acadian" also carried 2,000 tons of wire fencing from the Owen Sound Wire Fence Co. This shipment was also for the Canadian West. This makes a splendid shipment from local industries. G. T. C.

CALGARY.

December 6.—A petition is being circulated among the retail merchants of Alberta praying the provincial government to amend the law in regard to garnishees against wages. It is claimed that the law in force to-day leaves an opportunity to the debtor to render the garnishee inoperative by arranging to collect his wages at short intervals. No objection is taken to the equity of exemption of a certain amount from garnishment so as to permit a debtor to live. The point raised, says the Trade Gazette, is that the law does not differentiate, so far as the exempted amount is concerned, between wages which are earned weekly, fortnightly, monthly or quarterly. At present the amount exempt is $25 out of the amount of wages due at the time the garnishee is served on an employer. Those interested in the peti-

Condensed or "Want" Advertisements

Those who wish to sell or buy businesses or stocks, obtain competent help, connect with satisfactory positions or secure aid in starting new enterprises should not fail to use the Want Ad. Advertisement page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere who is looking for just such a proposition as you have to offer.

AGENCIES WANTED

GOOD line of hardware wanted on commission for city and country. To commence January 1st. Apply Box 925, HARDWARE AND METAL, Toronto. (49)

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

ENGLISH firm manufacturing full line of paints, dry colors, varnishes, etc., desire to secure Canadian agent who has good connection with the Canadian hardware trade. Having direct steamer connection with Montreal, long experience in manufacturing, up-to-date plant and equipment and large output, we believe good live Canadian agent could build up good business for us. We would be willing to advertise the line in Hardware and Metal. Apply, giving agencies held at present, to Box 917, HARDWARE AND METAL, Toronto. (50)

MANUFACTURERS' AGENT with good connection with hardware trade wanted to take hold of first class line of ice cream freezers. State lines already carrying. Box 922, HARDWARE AND METAL, Toronto. (50)

PROBABLY the most talked about machine in Canada is the Hainer Book-keeping Machine. It combines in one machine the cash and credit register, time recorder and account register. Representatives wanted everywhere. Write for our proposition. Book-keeping Machines, Limited, 424 Spadina Ave., Toronto. (tf)

TILES—Wanted resident agents to sell glazed tiles, floor tiles, etc., in Winnipeg, Montreal, Quebec, Toronto, Halifax, Vancouver. Apply "Tiles," HARDWARE AND METAL, 88 Fleet Street, London, England. (51)

WANTED—By wholesale importing house, first-class salesmen for hardware and similar lines, to cover Montreal and surrounding districts. All references absolutely necessary. None but first-class, experienced men need apply. Box A, HARDWARE AND METAL, Montreal, (51)

tion say it is unfair that of three men, each earning $100 a month, the one earning his wages monthly should have an exemption of $25 a month, while the man earning fortnightly wages should receive an exemption of $50 and the man who arranges for weekly wages should be exempt to the full amount of his $100. It is sought to amend the law to provide that, "a garnishee summons shall attach all wages earned by an employee over and above one dollar per working day for the period during which such wages are earned." It is pointed out that an amendment of that character would greatly benefit retail merchants and be of value to them in the collection of difficult accounts.

VICTORIA.

December 3.—Many changes have taken place in business houses during the past year, old established houses have had to move out to make way for the new, some old firms being compelled to go out of business entirely owing to not being able to secure suitable locations. At the present time several moves of a similar character are going on. J. Sayward has decided to tear down a two storey building on Government St. and build a six storey building on the site. The location is at present occupied by Fox's Cutlery Store, one of the oldest established businesses in the city, having occupied the present stand for over 30 years. Mr. Fox's new store will be over double the size of the present quarters and when fitted up will make a very handsome store.

A 5, 10 and 15 cent store is to be opend up in the city at the beginning of the year. The company have acquired the leases of two stores in the very best business section, these to be converted into one large store.

For the first time this year the monthly building returns show a decrease in the amount of permits taken out. Bad weather conditions have had a detrimental effect. The figures for the month are $56,000, considerably under last November's total. The whole year's returns show an increase of 56 per cent. over last year.

Tenders are being called for the purchase of the stock of the Ladysmith Plumbing and Heating Co., of Ladysmith, B.C. The stock amounts to $2,653.10.

W. B. C.

VANCOUVER.

December 4.—The council of the municipality of South Vancouver has made the following awards in connection with the instalation of its water system: Pump and motor, to be installed, $925, Western Engineering Company, to deliver at least 6,400 gallons of clear water per hour through 7,000 feet 6-inch pipe with a total head of 200 feet; Crane Company, galvanized fittings, $117.13; Terminal City Iron Works, cast iron specials, $2,023.36; Canadian Fairbanks Company, galvanized iron pipe, $2,350.80, also for brass goods amounting to $1,814.68; Robertson-Godson & Company, hydrants, $48 each.

This year is to prove a banner one in building, as already the value of permits for the year is over the total of 1908, and it is expected that for 1909 the total will be at least $7,000,000. For the last two weeks they have been $367,379, which does not take into account the exceedingly large number of buildings that are being erected immediately outside of the city limits proper, but which is practically in the city, for the material is purchased here, and the people trade here. One of the largest buildings proposed is that of the Canadian Brewing Company, which will cost $125,000.

Flat Rate Business Taxation System Recommended

Manitoba Business Men Again Discuss Extra-Provincial Corporations Act—Provincial Government Awaiting Their Decision—Whole Matter Turned Over to Board of Trade.

Staff Correspondence.

Winnipeg, Dec. 8.—Following the verbal agreement between the committee, which had been dealing with the Extra Provincial Corporations Act, and the provincial government to the effect that the act would not be enforced until the government again heard from the committee, the solicitor engaged by the local business men began at once to draft a letter outlining the various grievances and suggesting changes in the legislation.

It was the purpose of the committee to have this letter forwarded on to the government as soon as they could have it sanctioned by the general body from which the committee was appointed. Accordingly a general meeting was called on November 30. Instead, however, of the body endorsing the letter, the men present plunged into a long and spirited discussion over the various clauses of the Act. This fact did not demonstrate that the letter, which was in reality the report of the committee, was not satisfactory, but it did demonstrate that there were a great number present who were not familiar with the Act and were not aware of its far-reaching effect.

The Real Opposition.

Those, however, who had familiarized themselves with the situation enlarged upon a phase of the Act which is a basis, perhaps, for the whole feeling of opposition. This was the system of taxation which the government, according to the Act, intended to bring into operation. The Act states clearly that the taxation would be according to the capital stock of the outside company. This would simply drive away the business which is at present being done by large capitalized companies.

As one speaker, who represents a London firm, capitalized at £20,000,000, said, it would be absurd that his company would continue to do business here for a few hundred dollars per year.

The fact also that the solicitor's letter presented by the committee did not deal with this matter, had the tendency to create a widespread interest in the matter of the basis of taxation.

R. H. Bryce, a dry goods commission merchant, spoke strongly in favor of a system of taxation according to the amount of business the company does in the province. Mr. Bryce, however, did not suggest any method by which the government could get at each company's list of sales in the province. In case this was done each company would have to submit an annual report stating definitely the volume of the business transacted, and this, few companies would care to do. In any case the government could easily be defrauded.

A Flat Rate Proposition.

J. B. Nicholson, a grocery commission merchant, brought forth another system as a basis of taxation. His proposal was a flat-rate scheme such as that in operation in British Columbia. Mr. Nicholson did not stipulate any amount, but he suggested that a tax of $150 yearly might satisfy all companies doing business within the province, and also the government, if the matter was urged upon them.

This was put into a form of a motion by Mr. Nicholson and finally seconded and carried, that the committee's letter be approved and the government approached regarding a flat rate system in addition to the contents of the letter. The meeting then adjourned.

In Hands of Board of Trade.

On December 3rd another general meeting of the Brokers' Association, the Grain Exchange, and the Board of Trade was held for the purpose of delegating a specified body to take up the matter of presenting the petitions passed at the previous meeting, to the Government. Chairman J. B. Nicholson suggested that the Board of Trade should be given the matter entirely as many members of that board were already interested in the question.

It was argued, however, that should the Board of Trade be given the matter to deal with they should not be limited to carry out the motion passed at the previous meeting, namely that the former committee's letter be approved and forwarded to the government.

It was carried unaminously that the Board of Trade be given charge of the whole matter and deal with the Act as it stands and that the letter and all previous suggestions serve that body as information only.

Blessed is the silent man, for he is able to keep the lid on his ignorance.

The world respects a thief more than a dead beat—and you know what it thinks of a thief.

The average man is willing to risk choking if permitted to bite off more than he can chew.

Western Canada Hardware Market Situation

Our Western Correspondent Reviews the Market Outlook — Hardware Quotations Corrected by Telegraph From Hardware and Metal's Winnipeg Office up to Noon on Friday.

Winnipeg, Dec. 8, 1909.

The trade this week is largely in specialties and holiday lines. Retailers everywhere have not taken advantage of the Xmas trade opportunities as largely as they should. It is true that staples have been going out well and the trade is in excellent condition, but at the eleventh hour orders are coming in for immediate shipments of such lines as sporting goods, toys and enamel and plated ware. It is just a question of how many orders can be filled and shipped in time for the retailer to have the full advantage of it. In fact those who are not already stocked cannot hope to have the trade that they otherwise would have could they have made adequate displays of the distinctly holiday lines.

Navigation has closed at Fort William and it is reported that it will take some time for all the hardware stocks to be transferred to various points of destination. The shippers' section of the Board of Trade working in conjunction with the wholesale hardware houses are endeavoring to rectify many of the existing evils caused by the rush that is unavoidable prior to and at the close of navigation

Winnipeg Quotations.

WIRE—Barbed wire, 100 lbs., $3.15; plain twist, $3.40; staples, $2.90; annealed wire $2.85 base; oiled, 10c extra; bright iron, $3.15 base; brass spring wire, 29c base, plain galvanized wire, 6, 7 and 8, $3.50; No. 9, $3.10; No. 10, $3.60; No. 11, $3.70; No. 12 $3.30; No. 13, $3.40; No. 14, $4.25; No. 15, $4.75; No. 16, $5.

SHERWIN-WILLIAMS
DECOTINT
Sanitary Wall Finish
Ready for use when mixed with Cold Water

Decotint represents perfection in the Wall Finish line today. Manufactured in dry powdered form, it requires only mixing with cold water to be ready for instant use. Decotint, unlike kalsomines, does not rub off on the clothing and on account of its moderate cost permits of frequent changes in interior color schemes at very little expense. It flows well under the brush and dries slowly, thereby giving plenty of time to work one stretch into the other without "laps."

BANK OF MONTREAL

UNUSUALLY LARGE INCREASES IN DEPOSITS REPORTED—MUCH OF THIS BROUGHT IN BY FOREIGN INVESTORS — SATISFACTORY REPORTS REGARDING CROPS AND FOREIGN TRADE.

The ninety-second annual general meeting of the shareholders of the Bank of Montreal was held in the Board Room of the institution yesterday, at noon.

There were present:—Sir Edward Clouston, Bart., vice-president and general manager; Sir William Macdonald, Sir Thomas G. Shaughnessy, Hon. Robert Mackay, Messrs. A. Baumgarten, R. B. Angus, E. B. Greenshields, David Morrice, Hon. J. K. Ward, G. F. C. Smith, Lieut.-Col. Prevost, James Kirby, K.C.; C. J. Fleet, K.C.; John Patterson, Alfred Piddington, George R. Hooper, B. A. Boas, George Durniord, Hugh Paton, H. Dobell, W. H. Evans, G. Scott, H. Joseph and J. Taylor.

In consequence of the absence of the president, Sir George Drummond, K.C.M.G., through indisposition, Mr. R. B. Angus moved that the vice-president and general manager, Sir Edward Clouston, take the chair.

This was seconded by Mr. E. B. Greenshields, and unanimously concurred in, after which it was resolved, on motion of Mr. Hugh Paton, seconded by Lieut.-Col. Prevost: "That the following be appointed to act as scrutineers: Messrs. G. F. C. Smith and George R. Hooper; and that Mr. James Aird be secretary of the meeting."

The vice-president then submitted the report of the directors as follows:

THE DIRECTORS' REPORT.

The directors have pleasure in presenting the report showing the result of the Bank's business for the year ended 30th October, 1909.

Balance of Profit and Loss Account, 31st October, 1908		$ 217,628.56
Profits for the year ended 30th October, 1909, after deducting charges of management, and making full provision for all bad and doubtful debts		1,826,167.74
		$2,043,796.30
Dividend 2½ p.c. paid 1st March 1909	$360,000.00	
Dividend 2½ p.c. paid 1st June, 1909	360,000.00	
Dividend 2½ p.c. paid 1st Sept., 1909	360,000.00	
Dividend 2½ p.c. payable 1st Dec., 1909	360,000.00	$1,440,000.00
Balance of Profit and Loss carried forward		$603,796.30

Since the last Annual Meeting Branches have been opened at Three Rivers, P.Q., Weyburn, Sask., Oakwood, Ont., Moose Jaw, Sask., Outlook, Sask., Sault Ste. Marie, Ont., and Sub-agencies at Merritt, B.C., Cloverdale, B.C., Spring Coulee, Alta., and Bathurst Street, Toronto.

The Branches at Grimsby, Ont., and Millbrook, Ont., have been closed.

With deep regret the Directors have to record the death of their esteemed colleague, Mr. A. T. Paterson, who had been a member of the Board for upwards of twenty-eight years.

The vacancy on the Board has been filled by the election of Mr. A. Baumgarten.

All the Offices of the Bank, including the Head Office, have been inspected during the year.

G. A. DRUMMOND,
President.

Bank of Montreal,
6th December, 1909.

THE GENERAL STATEMENT.

The General Statement of the Bank on 30th October, 1909, was read as follows.—

		91,400,502.96
		$220,582,746.70

E. S. CLOUSTON,
General Manager.

Bank of Montreal,
Montreal, 30th October, 1909.

THE VICE-PRESIDENT.

The Vice-President then spoke as follows:—

The most important change from last year in the statement submitted to you is the unusually large increase in deposits, amounting to $36,000,000. Part of it is temporary, pending large payments in connection with special transactions, part is the natural increase from depositors as a result of the prosperous condition of affairs in this country, but the largest portion of the increase arises from money brought into Canada from other countries. It is quite possible that if the apprehensions expressed in many quarters as to the consequence of the new methods of British taxation are realized, deposits from this last source may be still further enlarged. It is very important, therefore, that nothing should be done in Canada by injudicious legislation, the exploitation of doubtful enterprises, or otherwise, to stop this flow of capital. Our call loans have increased by about the same amount as our deposits, and what is not necessary to retain as a portion of our reserves, will be gradually brought into the country to meet the commercial requirements as they arise.

The profits are some $130,000 less than last year, but considering the low rates ruling for the greater part of our fiscal year in London and New York, the result may be regarded as satisfactory. I am glad to say that the outlook for the coming year, or at least, for the earlier months, is more promising, and I shall be much disappointed if we do not make a better showing when next we meet.

The rapidity of the recovery of trade from the set-back following the monetary crisis in the United States two years ago has been as striking as it is satisfactory. Conditions to-day are, as a whole, excellent. The large harvest gathered in the Northwestern Provinces in itself affords a basis for active and profitable business for some time to come. How considerable a factor in the commercial life of Canada the agricultural output of our Northwest has become may be realized from the fact that the yield of wheat, oats and barley is this year 313,635,000 bushels, as compared with 232,620,000 bushels in 1908, 160,000,000 bushels in 1907, or 32,000,000 in 1900. A tenfold gain in the grain product of the Northwestern Provinces in nine years conveys some idea of the commercial potentialities of the country.

The marketing of wheat has been quite prompt, and the railways have had no difficulty in moving the crops. In the ten weeks to November 14th, there had been inspected in the Northwest 43,866,000 bushels, being 10,300,000 bushels more than in the corresponding period of 1908, while the shipments from Fort William and Port Arthur amounted to 35,815,000 bushels up to November 14th, or 13,300,000 bushels in excess of the preceding year's shipments.

Our foreign trade has not only reached, but has begun to exceed, the high-water mark of two years ago. In the six months ending September 30th, last, imports for consumption and exports of domestic products were of the value of $292,857,000, or $46,000,000 in excess of the corresponding period of the preceding year, imports having been larger by thirty-six millions and exports by ten millions. The adverse balance of trade has thus again begun to grow, but while men and money pour into Canada from abroad the disparity need not cause uneasiness. Domestic industries are, speaking generally, working well up to the limit of capacity. Labor is fully employed; the lumber trade has improved. The export of dairy produce has been larger than last year, with high prices ruling throughout the season; all farm products, indeed, are exceptionally dear.

Such tests as bank note circulation, bank clearings, railway earnings, all point to the great activity of business. At the end of October the note circulation exceeded $89,600,000, or $6,600,000 more than a year ago. Business failures have been neither numerous nor serious, being for the year to October 1st, 1,486, with liabilities of $12,919,000, as compared with 1,629 failures and liabilities of $16,959,000 in the previous twelve months.

Railway construction is proceeding apace over the whole face of the Dominion. West of Lake Superior nearly 1,100 miles have been built this year, and the Western Provinces now have 11,500 miles of railway, as much as the mileage of all Canada twenty years ago.

Immigration has picked up after the short relapse in 1908, the estimate of the number of new settlers this year being 150,000, about one-half of whom are experienced farmers who have moved into our Northwest from the United States. The evidences of expanding trade, accumulating wealth, and material progress and development might be cited at great length, and a pleasant picture painted of our happy condition. There are always, however, dangers to be avoided, and never more so than when the outlook is so bright and inspiriting. A tendency to over speculation in real estate in some parts of Canada is already apparent, and this, like other forms of gambling, can bring only disaster when the inevitable crash comes. How suddenly conditions may change the rapid advance in the Bank of England rate last autumn attests. Only by prudence both in taking and granting credits and by avoidance of wild-cat ventures and exploitations on the high reputation Canada enjoys in the British money market, can we reasonably anticipate a continuance of the prosperity now enjoyed.

There is only one other observation I desire to make. As you are aware, the decennial revision of the Bank Act will take place during the present session of Parliament. In one or two respects changes of a more or less technical character will be found necessary, but the Act has been so thoroughly revised in the past, it withstood so staunchly the trials of 1907, and its operation has been found to conform so admirably to the requirements of trade and the interests of a rapidly developing country, that I hardly think it likely that any material change will be made.

In our note circulation we have a system which enables us by its elasticity to carry out the heavy autumnal demands without creating any monetary stringency; and to show how valuable it is to the whole business community, I need only point to the fact that we are moving the large crop in the Northwest with great ease and without any advance in rates to our commercial customers.

I beg to move: "That the report of the directors now read be adopted and printed for distribution among the shareholders."

This was seconded by Mr. E. B. Greenshields, and unanimously adopted.

Mr. H. Joseph then moved: "That the thanks of the meeting be presented to the president, vice-president and directors for their attention to the interests of the Bank."

Mr. C. J. Fleet seconded the motion, which was unanimously agreed to.

Sir Thomas G. Shaughnessy moved: "That the thanks of the meeting be given to the general manager, the assistant general manager, the inspectors, the managers and other officers of the Bank for their services during the past year."

The motion was seconded by Mr. David Morrice, and was unanimously carried.

Sir Edward Clouston expressed acknowledgment on behalf of himself and fellow-officers.

THE DIRECTORS.

The ballot for the election of directors was then proceeded with. The scrutineers appointed for the purpose reported the following gentlemen duly elected:

R. B. ANGUS,
A. BAUMGARTEN,
SIR EDWARD CLOUSTON, BART.,
HON. SIR GEORGE DRUMMOND, K.C.M.G., C.V.O.,
E. B. GREENSHIELDS,
CHARLES R. HOSMER,
SIR WILLIAM C. MACDONALD,
HON. ROBERT MACKAY,
DAVID MORRICE,
JAMES ROSS,
SIR THOMAS G. SHAUGHNESSY, K.C.V.O.,
THE RIGHT HON. LORD STRATHCONA AND MOUNT ROYAL, G.C.M.G., G.C.V.O.

At a meeting of the Directors, held later, the Right Hon. Lord Strathcona and Mount Royal, G.C.M.G., G.C.V.O., was elected Honorary President: Hon. Sir George Drummond, K.C.M.G., C.V.O., president, and Sir Edward Clouston, Bart., vice-president.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal waterworks and sewerage systems, railway or mining news, etc.

Industrial Activity.

Crickway Bros. will build a $14,000 warehouse at Vancouver.

Bryson, Graham, Ltd., Ottawa, will erect a $12,000 furniture storehouse.

The Manitoba Pump and Windmill Co., Brandon, is extending its premises.

Keenan Brothers, Owen Sound, are building a sawmill at Miller Lake, Ont.,

J. H. Maher, Montreal, will erect a residence at Outremont, to cost $20,000.

The Golden Lake Lumber Co., Eganville, Ont., are making additions to their mill.

A new planing mill and sash and door factory is to be erected shortly at Vancouver.

J. C. Walsh will erect two semi-detached houses at Outremont, to cost about $22,000.

Wm. McNeely, of the Medicine Hat Milling Co., is erecting a business block at Lethbridge.

John Ash, of Ash & Co., contractors, Montreal, will erect a cottage at Outremont, to cost $6,000.

The International Harvester Co. will erect a four storey warehouse at Brandon at the cost of $75,000.

A $90,000 addition is proposed to be added in the spring to the Office Specialty Co.'s plant at Newmarket.

J. Scott of Port Huron, Mich., proposes establishing a refrigerator manufacturing plant at Camrose, Alta.

The Brooks-Scanlon Lumber Co., are planning to erect a large saw mill on the Fraser river at New Westminster.

The Saginaw Salt & Lumber Co. are to expend about $15,000 in improvements on their saw mill at Thessalon.

Bonuses aggregating $300,000 have been offered to any shipbuilding company erecting a plant on Halifax harbor.

Ambrose Kent & Sons will erect a ten-storey business block at Toronto.

Geo. Vanderly's will build a couple of dwellings at Welland.

The pulp works at Swanson Bay (Prince Rupert) of the Canadian Pacific Sulphite Pulp Co. are now working to their fullest capacity.

The contract for the new brewery at Vancouver has been let, the contract price being in the neighborhood of $150,000. Construction work will begin right away.

The Canadian Rubber Co. have purchased 25 acres of land east of Dominion Park at Montreal. They will build extensions to their plant on the new property.

Work on the garage, which is being erected at Hamilton for the McLaughlin company, is being pushed along rapidly and it will be ready for occupancy about February 1.

The Winnipeg Oil Co. have made application for a site at Moose Jaw, where they will erect a plant, with storage, cooperage, barreling and also a tank, capacity, 12,000 gallons.

The following building permits have been recently issued at Hamilton: M. Webb, two houses for W. W. Main, $2,000; John Shuart, house for J. Goodfellow, $2,000.

The new plant of the Sydney Slag Brick Co. at Sydney, C.B., which has been under construction the past several months, is now completed and the manufacture of brick has been commenced.

S. P. Weston, formerly manager of the Seattle Post-Intelligencer, and H. E. Bennett, a retired merchant, have purchased property at Vancouver for $40,000, where a large apartment house will be erected.

Permits were granted by the Toronto Board of Control last week to the Toronto General Trusts Corporation for the erection of an eight-storey office building and to the Standard Bank for the erection of a seven-storey bank and office building at that place.

A creosoting plant will be erected on Burrard Inlet, B.C., at a cost of several hundred thousand dollars. In association with several Vancouver capitalists, H. R. Rood, head of the Pacific Creosoting Company, of Seattle, will be in charge of the undertaking.

The Widespread Implement Co., of Buffalo, has been negotiating with the municipality of Port Dover, regarding the establishment of extensive works there consisting of a planing mill, foundry and machine shop, including repairs of all kinds for custom work.

At a cost of $1,000,000, the M. S. R. Company is about to commence the erection of a plant, consisting of car building shops, machine shops, electrical and winding shops, blacksmith and paint shops, and a large building for the stores and material of the company.

A building permit has been issued to R. Kerr, covering a business block at Vancouver. This building will cost $33,000. Another large permit was issued to J. D. Allan for a residence costing $10,000. Other permits granted were O. H. Barber, $2,300; H. McKinnon, two houses, $3,200; T. F. Caravan, $3,000.

Municipal Undertakings.

A $40,000 waterworks system and a $20,000 sewerage system are proposed for North Vancouver.

By-laws to provide $16,000 for waterworks plant will be submitted at the next elections at Smith's Falls.

Vancouver is advertising for sealed tenders for the instalation of a sewerage system for Vancouver Heights.

St. Catharines water commission decided at a recent meeting to construct a second main from the reservoir to the city.

New storm sewers have been recommended at New Westminster, by City Engineer Blackburn. Estimated cost, $10,000.

Vankleek Hill proposes instaling a municipal waterworks system at a cost of $27,000, and a drainage system to cost $25,000.

Alterations are being made on the Elmira, Ont., waterworks system by means of which a duplicate system for fire protection will be available.

The Canada Foundry Co., Toronto, were recently awarded a contract for supplying water mains required for extensions at Orillia, at $34.20 per ton, f.o.b. Orillia.

The McKnight Construction Co., who have been awarded the contract for the installation of the sewers on Armstrong and Whitewood Streets, New Liskeard, have commenced operations.

Thos. Jackson & Son were awarded the contract for a sewer in McIntosh Avenue, Winnipeg, at a price of $1,613.55. The tender of the Canadian Fairbanks Company for the supply of hydrants at $37 each was accepted.

The tender of Winnipeg's Engineer of Construction for the construction of the Clifton Street sewer there was accepted at $23,182.35. The Engineer of Construction also secured sewer works: in May Street, Nassau, McMillan, Chalmers Streets, and a water main in Poplar Street.

Public Buildings.

A $10,000 post office is to be built at Chilliwack, B.C.

The public hospital to be erected at Oshawa will cost $20,000.

Niagara Falls new $50,000 armory may be erected next year.

A new hospital for Prince County, will be built at Summerside, P.E.I.

It is stated that a Methodist church on the Glebe may be built next year by the Ottawa Methodist Social Union.

A site for Yorkton's new $35,000 Collegiate Institute, to be erected next year, has been selected by the school board.

Architect A. E. Nicholson has prepared plans for additions and improvements to the Y.M.C.A. building at St. Catharines.

The contract for the erection of a Catholic schoolhouse at Montreal has been awarded by Architect Chas. Bernier, to Bouleu Bros.

Dumont & Maclean, of Riviere du Loup station, have been awarded the contract for the construction of the Rimouski armory at $8,450.

Fire Chief Carlisle of Vancouver, has estimated the cost of the two halls, to replace those now in use at Fairview and Mount Pleasant, at $25,000.

Plans for the new Alberta university buildings have been accepted, and matters are now in readiness to proceed with the construction early next season.

The congregation of West Street Methodist Church, Owen Sound, has purchased the site for a new church, which, it is estimated, will cost $25,000 to erect.

The Collegiate Institute Board has decided to ask the St. Catharines city council to provide the sum of $10,000 for an addition and improvements to the present building.

The Roads Committee of the Montreal City Council have appropriated $63,500 for extensions to house and erection of stable for Mr. Scanlon, Superintendent of Roads Department.

A company is being formed for the purpose of erecting a sanitarium at Little Manitou Lake, three miles from Watrous, Sask. Plans for the erection of over 200 cottages, early next spring, are under way.

Announcement has been made by the Minister of Public Works of the plans for the construction of the new block of departmental buildings to be erected at Ottawa. They will be 500 feet in length and 205 feet in width. It is not likely

General Building.

The Bank of Montreal will erect next spring in Port Arthur, a three-storey building for offices.

A Montreal syndicate has purchased property on which a ten-storey office building will be erected.

Robert Neville, contractor, Montreal, will erect a terrace of seven semi-detached houses at Outremont.

Jos. Sawyer, architect, Montreal, has awarded contracts for the erection of a residence there for J. Beaudry, to A. Huberdeau and A. Brousseau.

Among the building permits issued at Quebec recently was one for M. Chartre, $3,000, and one to W. Bouchard & Co., contractors, for Mde Narcisse Cote, $7,000.

New Companies.

Canadian Safe Co., Windsor ; capital, $100,000 ; to make safes and vault doors. Incorporators, J. E. Blackmore, Detroit ; N. A. Bartlett and A. R. Bartlett, Windsor.

Swansea Smelting and Refining Co., Toronto ; capital, $100,000 ; to mine and treat ores and make articles of metals. Incorporators, A. E. Knox, C. F. Ritchie and J. H. Oldham, Toronto.

Rogers Supply, Ltd., Toronto ; capital, $100,000 ; to take over the Rogers Supply Co. and make Portland cement and artificial stone. Incorporators, Alf. Rogers, J. W. Rogers and A. E. Stovel, Toronto.

The Courtright Stove Co., Courtright, Ont., capital $40,000, to manufacture stoves, furnaces, gas ranges and electric fixtures. Provisional directors, F. C. Watson, M. Sanders and H. W. Unsworth, Sarnia.

Canada Bolt and Nut Co., Toronto ; capital, $2,500,000 ; to smelt ores, metals and minerals, and manufacture their products. Incorporators, E. G. McMillan, J. E. Riley and G. B. Strathy, Toronto.

The International Tool Steel Co., Toronto ; capital, $750,000 ; to mine and treat metals, carry on a foundry and machine shop, and make tools. Incorporators, S. J. Kelly, Jas. Ross, Chas. Lehmann, Toronto.

TRADE MARK DECISION.

A case of importance to the cutlery trade was heard at the Sheffield, England, Police Court, recently, when Harry Morton, cutlery manufacturer, appeared in answer to five summonses issued by Joseph Rodgers & Sons, whose Canadian agents are James Hutton & Co., Montreal. Defendant was summoned for having in his possession for sale table knives to which a trade mark, so nearly resembling a trade mark of Joseph Rodgers & Sons, as to be calculated to deceive, was falsely applied. The defendant was found guilty, but on his giving an assurance that he would in future refrain from striking the word Rodgers upon the knives, the Bench imposed a nominal fine of £10, and ordered the goods to be destroyed.

Catalogues and Booklets

Manufacturers or jobbers sending printed matter for review, should draw attention to the new lines listed; and retailers sending for catalogues or other matter, should write on their regular printed letterhead and mention this paper to make clear that they are in the trade.

Welsh Enamelled Ware.—A catalogue which for all-round excellence in production we have seldom seen approached, let alone surpassed, is that issued by The Welsh Tinplate and Metal Stamping Co., Llanelly, South Wales. The company are manufacturers of tinned and enamelled ware, and every article shown in the 176 page catalogue is made throughout on their own premises at the Cambrian Works at Llanelly. The company claim to make a larger variety of enamelled and tinned hollow-ware than any other individual maker in Europe. A large stock is carried at all times and the company pride themselves on their quick delivery. The company does not cater direct to the retail trade, their business being done through wholesale and export houses. The catalogue is printed in English, French, German and Spanish. A copious index is placed at the beginning of the catalogue and some useful comparative tables are found at the end. A private code book accompanies the catalogue for the convenience of foreign buyers who may wish to order their goods.

Armstrong Tool Holders.—Armstrong Bros. Tool Co., Chicago, have issued catalogue No. 18, devoted to tool holders for turning, planing, boring, slotting, threading, cutting off and drilling metals. It contains descriptions of an immense number of tools. Among the new goods listed are automatic drill drifts, the advantages of their use, not only saving time but also saving drills, chucks, etc., from damage and abuse. Plain drill drifts are also new. These drill drifts are drop forged from steel, finished and hardened. A third new line is the Armstrong "Standard" reversible ratchet drills, made of all steel and hardened all over. They are made in many sizes and styles. The various tool holders made by this firm carry the endorsation of some of the biggest users in America.

CANADIAN ASBESTOS PRODUCTION.

The chief asbestos-producing country in the world is the eastern townships of Quebec. Some little is also found to the north of Ottawa, but the mining of asbestos in Canada is at present confined to the first-named region, where it has been worked since 1878. The value of the annual output of Canadian asbestos has grown from $25,000 in 1880 to over $2,573,000 in 1908, (90,773 tons), so that next to coal this is now one of the most important of non-metallic mineral products, and supplies a very large proportion of the world's demand.

While a portion of the output is sufficiently high grade to be shipped as crude, the greater part is crushed and the fibre extracted by special machinery. This output finds a wide distribution. Our best customer is the United States. that country last year taking 46,846 tons, valued at $1,322,890. Great Britain took 5,347 tons; Belgium, 3,372 tons; France, 2,332; Italy, 814; Germany, 225; and Japan, 97 tons.

Although the chief source of supply Canada does not as yet manufacture all the asbestos goods required for home consumption, and last year we imported $190,980 worth of articles made of asbestos, on which there was paid a duty of 25 per cent. Outside of Canada, Russia is the chief asbestos-producing country. In 1907, that country's output is set down as 9,356 metric tons. The United States, Cape Colony and Cyprus are also producers, though the quantity is limited.

NEW LOCK NUT.

Herbert Terry & Sons, Redditch, England, have introduced a new lock nut which is being made in all sizes. To look at the nut it has no dissimilarity in appearance to any other, except that a small hole is drilled through and it is somewhat deeper in shape. The inner side of the nut is recessed, and within is a coiled steel spring, exactly fitting and following the thread, contracting in one direction and expanding in the other. Once screwed up it is claimed nothing can shift the nut, and it is practically solid on the spindle or thread. This is done by running a wire through the hole which lifts the spring end, and off comes the nut as easily as any other. It is an extremely ingenious and clever device, and is bound to be much sought after when its qualities and simplicity are known.

Herbert Terry, the founder of Terry & Sons, began business fifty years ago, making a small hat spring and they have added to their line until they now claim to make every conceivable type of spring. A speciality is made of bicycle and motor springs and also furnish assortments for sale in retail stores.

BURSTING OF GUN BARRELS.

Gun barrels do not burst, of course, without a cause, but usually that cause is one of which the shooter is entirely ignorant, but nevertheless, no one is responsible but himself. Gun barrels can only burst by having some obstruction in the barrel or by overloading with nitro powder. Any gun barrel can be burst by misuse or by carelessly loading smokeless powder, but no barrel will burst by using factory-loaded ammunition, provided there is no obstruction or foreign substance inside the barrel. When a gun barrel bursts at the breech or chamber it is caused by an overloaded shell, and when it bursts in the centre or near the muzzle, it is caused by some obstruction, such as a dent, snow, water or mud.

The biggest crowd before a window doesn't prove that it is the best display. The true proof of a good trim is in the number of customers it brings into the store.

The Retail Paint Trade

A HOLIDAY PAINT DISPLAY.

We would once more advise merchants not to neglect their paint department in the display that they intend to make during the following weeks. Even if there were no sale for paint at this time of the year, it would be a wise move to display the stock. The store will be thronged with customers inspecting the goods that the merchant has displayed for the holiday trade. No better opportunity could be afforded of bringing to their notice the paint department. It will be remembered on some future occasion. It is not difficult to make a pretty display with paints, and if the merchant does not push his lines to sell, yet he can make the space devoted to these lines, one of the show sections of his store.

But paints have a sale at this time of the year, especially the household lines, and therefore the advisability of making a display is all the more apparent. "Brighten up" should be the cry at this festive season of the year. "Do not let your friends see articles of furniture that sadly need varnish, or rub against stove pipes that need aluminum, or sit in a corner where the boards want stain or the radiators bronze paint. The doors want touching up, the bath a touch of enamel and so. Do not let your friends go away thinking that the home is being neglected." The merchant could not have better selling points than these.

We are firmly convinced that a very strong demand could be created if the merchant seriously set himself to develop the great idea of brightening up at Christmas. A good use can be made of the children, too, at this time. They will be coming into the store with their mothers, and with their fondness for bright colors, the color cards supplied by the paint manufacturers will be very acceptable to them. We venture to assert that few children will fail to carry home the pretty colored cards that the merchant hands them. And once the card gets home the merchant has overcome one of his greatest difficulties. Many customers never take home any advertising matter that is handed to them. Unless it is packed within a parcel it is probably thrown away when in the street, and if there is no parcel then the merchant is, to use a terse expression, "up against it." Especially so at this time when many people will be in the store simply on a round of inspection. It is, therefore, a good move to utilize the children. Give the color cards directly to them. They will hold on to them all the more tightly, while the curiosity of the older folk will commander these color cards later on.

The advertising matter that is supplied to the merchant by the manufacturer can be extensively used in his scheme of decoration. It is impossible to find anything more artistic than some of the color illustrations supplied for display purposes. Magnificently depicted houses with a minute attention to detail that could not be surpassed, and much more worthy of a frame than some of the so-called artistic productions sold for parlor pictures, are at the command of some merchants, and they should utilize the opportunity. The

"the finish"
"that endures"

M. L. Floorglaze

This is the new super-good floor finish—now coming in Transparent Lacs as well as Solid Enamel Colors—that your customers will always want to talk about. With a line of M. L. Floorglaze Enamels and Lacs you can take care of a bigger and better satisfied trade, without stocking so many kinds of paints and varnishes as you carry now.

Send for sample can, new color card, and p oof that it is sold for you as well as to you.

store should be made as picturesque as possible, and the merchant must be lacking in ideas if with the help of his paint advertisements and some artificial floral decorations he cannot give his store a good Christmas appearance and yet at the same time advertise his paint department.

PAINT AND OIL MARKETS

MONTREAL.

December 10.—There is a good tone to the paint market, and despite the fact that this is not a very active time of the year, a fair amount of trade is reported. Some heavy individual orders are noticed, and it would appear as if a few merchants in anticipation higher prices are looking after their spring requirements now. This is not only the case in the staple lines but in prepared paints as well.

No changes in the markets are reported. Linseed oil is firm, while the ground white lead market continues to strengthen. The advance last week does not seem to have checked the demand, which has undoubtedly improved lately. Varnishes have improved again, and there is now a fair call.

TURPENTINE—The inquiry continues good, and the tone of the market appears fairly steady. The market is in pretty good shape, and we quote from 78c to 80c for single barrels.

LINSEED OIL—No change is reported in the market. Buying continues good, and if there is not much speculation immediate requirements produce a steady demand. We quote: 1 to 4 barrels, in one delivery, raw, 73c per gal.; boiled, 76c per gal.; net 30 days, f.o.b., Montreal.

GROUND WHITE LEAD—The markeet seems firmer, and better, for the advance last week. Orders have improved, and it looks as if merchants were stocking up, probably anticipating much higher prices now that a change has taken place. Ground white lead is practically the only staple that is showing low figures. We quote: Strictly pure about $5.35 to $5.85, according to quality, and No. 1, $4.95 to $5.35, f.o.b., Montreal.

RED LEAD—There is a fair demand, but the market is still without feature. We continue to quote: Genuine red lead in casks, $4.25; in 100-lb. kegs, $4.75; less quantities at $5.75 per 100 lbs.: No. 1 red lead, casks, $3.75; kegs, $4.25, and smaller quantities, $5.25.

VARNISHES AND JAPANS — The call for varnishes and japans has improved as was expected. There is a good demand from the industrial centres. Carriage and implement varnishes are moving well, also household varnish in small tins.

WHITE ZINC—The market is quiet, and without any marked feature. Prices are steady, and we quote: Dry V.M. Red Seal, 7½; Red Seal, 7c; French V.M., 6c; Lehigh, 5c; white zinc, ground in oil, pure, 8½c; No. 1, 7c; No. 2, 5½c.

PUTTY—The demand for putty continues steady, although the volume has fallen off. Still there is a fair trade doing. We quote: Standard putty, 800 lbs. in casks, $1.75; in 100-lb. drums, $2; bladder putty, 400 lbs. in barrels, $2.15; in 100-lb. cases, $2.25; in 25-lb. tins, $2.15; 12½-lb. tins, $3.25, f.o.b., Montreal.

TORONTO.

December 10.—Quietness is beginning to settle upon the paint market, and with the exception of glass and putty and some odd lots of white lead in oil very little new business is transpiring. Orders are passable both in number and quantity. Letter orders are fair. The Christmas season is in some respects responsible for the lull, most people intending to do painting are putting off the work until the new year.

Travelers are coming in for the holidays and some of the jobbing houses are going over their books and closing accounts preparatory to getting ready for next year. On all sides satisfaction is expressed at the volume of business done this year, which in some cases has exceeded expectations.

The market is in much the same condition as last week. Turpentine while unchanged in quotation from last issue is a little easier, linseed oil is steadily firm, and some grades of white lead have increased in price 10 cents a hundred.

TURPENTINE—There is a dullness reported from the Southern States in the product and very little doing for home consumption, but there has been rather more than usual buying the past week for export that has tended to keep the market fairly firm. For a couple of days no quotations came out of Savannah, denoting some slowness in trade. Locally the situation is dull and very little business is passing. The quotation is yet at 80 cents, but some cutting is going on, and 79 cents is nearer the mark for single barrels.

LINEED OIL—There is no change in the price of linseed oil and the price of flaxseed seems to be stationary. The season for present deliveries is about closed, no one anticipating any special demand from the paint trade until after January 1st. Quotations are yet 73c and 76c for single barrels of raw and boiled respectively.

GLASS—This is the liveliest line for paint jobbers just now, and local consumption is taking up large quantities. The discount remains at 30 per cent.

PUTTY—As with glass, putty is experiencing good demand. The market is steady and prices are unchanged. Casks

White Lead

At the present time the white lead situation is interesting.

We are the only firm in Canada who corrode and grind white lead, in addition to making Varnish, Dry Colors, Paints, Enamels, etc., etc.

Our white lead proposition is naturally the very best.

International Varnish Co., Limited

TORONTO

Makers of Fine Varnishes — Branch of Standard Varnish Works

New York Chicago London Berlin Brussels

of bulk putty are worth $1.75 per hundred; drums, $2; and oladders in barrels, $2.15.

WHITE LEAD—Some grades show an advance of 10 cents per hundred, prices ranging from $5.55 to $6.10 While other lines have not advanced there is a probability that all grades will be up 10 cents a hundred after the beginning of January. Demand is satisfactory considering the season, but is not by any means brisk.

RED LEAD—Trading is light and prices remain as at last issue—$4.25 to $4.55.

ROSINS—The dark grades have met with some decline but the light colored rosins still maintain their price.

PETROLEUM—The situation remains steady and unchanged. Prime white is 13½c; water white, 15½c; and Pratt's astral, 17½c.

A HANDSOME CALENDAR.

The Canada Paint Co. Montreal, each year issue a calendar of original design illustrting some one of the many classes of their products. Two years ago, for instance, their calendar depicted a bridge painter at work and a year ago an automobile scene illustrated the use of the company's varnishes. This year they have undoubtedly excelled previous efforts by issuing a modern ocean sailing vessel scene showing a full-rigged nitrite ship from Chile under heavy sail on the Pacific ocean, the blue waters of which show in sharp contrast to the darkened clouds upon which the first rays of the rising sun put a silver lining.

The painting is the work of Harry Clucas, the Toronto sales manager of the company, who a quarter of a century ago wielded a paint brush in London, Goderich, Toronto and other parts of Ontario. At that time he painted several boat scenes for the C.P.R. and Niagara Navigation Companies, but his present effort shows that during two decades of paint selling he has not forgotten how to use the brush.

The calendar is lithographed in colors and measures 36 x 14 inches. It is intended to illustrate the company's marine paints, enamels and varnishes, and certainly is a well thought out design, being arranged so that it can be mounted on a mat and framed after it has served its purpose as a calendar. Paint dealers who have not received a copy should write for one at once.

SUPPLY OF GASOLENE.

"Draining a World Product" is the concise way in which Joseph Adams describes the tremendous demand for gasolene that has sprung into existence with the development of the internal combustion engine and particularly the automobile and the power boat. In a recent number of Harper's Weekly, Mr. Adams describes the methods for obtaining gasolene from crude oil, and says that it is conservatively estimated by the highest authorities that something over 4,000,000 barrels or 200,000,000 gallons of naptha, classed as "autonaptha" were consumed in the United States, during 1908, for all combustion engine purposes, and about 1,000,000 barrels for manufacturing and other purposes.

Mr. Adams predicts that 100,000 automobiles, boats and engines will be constructed during the present year, for which gasolene will be the chief fuel. This will increase the drain upon the supply and tax the enterprise and ingenuity of the oil magnates to keep up with the demand. The foremost oil chemists of the world are now said to be trying to split the oil molecules into fractions and thereby produce the required spirit atom, and some of the large oil refineries have spent vast sums in efforts to solve this difficult problem. There is profit in the manufacture and sale of gasolene, which is styled the "velvet" of the oil business, and anybody who can increase the quantity that can be derived from a given volume of oil, or improve the quality of the gasolene, will have a fortune in his discovery.

The drain upon gasolene is serious, but the refineries can probably keep up with it and therefore obviate the necessity of increasing the price of the liquid fuel. Should a shortage develop, with consequent high prices, there will be increased effort to utilize alcohol in automobile and power boat engines. At present it takes two gallons of alcohol to accomplish the results that can be obtained from one gallon of gasolene. This means not only lower cost, but also smaller bulk, which is a matter of great importance in aerial navigation particularly. A fuel that is 5 per cent. more efficient than alcohol, weight considered, would have preference in aerial navigation without regard for price. But inventors are at work on the alcohol problem, and they will doubtless be ready with a substitute fuel long before the supplies of oil that can be refined for illuminating purposes or converted into gasolene have become exhausted by the tremendous drain, which is growing rapidly on account of the adoption of power vehicles on land and water and the utilization of internal combustion enginery for the operation of industrial establishments.

PAINT NOTES.

The Martin-Senour Co., paint manufacturers, Montreal, have been granted letters patent at Ottawa, authorizing an increase of capital from $100,000 to $150,000.

The Canadian Paint Co. have obtained a permit to construct a paint warehouse on William street, Montreal, at a cost of $10,000.

In their report for 1908-1909, the Montreal Catholic School Commissioners announce that a new school for girls, on Wellington Street, and another for boys, on Centre Street, will be built this year in Point St. Charles, while the Meilleur School will be enlarged. A school for girls will also be built in St. James Ward.

PAINTS FOR 1910

You have about finished the paint season of 1909. You have a pretty good idea whether you got your share of the paint trade or not. If you did not get it, you should get it, and for 1910 you can get it. Here is the leader.

With the Ramsay Paints you can get trade if you use our plans. Many of our agents are already planning for 1910. Many in remote parts have already got stock in to open the next year's trade early. Already new agents in other centres are booked with us. Will you join? It won't cost you anything to find out how it will figure out for you if you will write us or ask to see our traveller. Now is the time to think up paints for 1910.

100% PURE

THE "WHY" OF IT

The greatest secret of success in making good paint is "just *good old-fashioned honesty.*" Of course it takes skill and experience to combine the ingredients in the right proportions for best results—but honesty is responsible for what goes into the can before the dealer gets it.

Martin-Senour Paint—100% Pure

Has been a success from the first day and all the years since, because we would not *compromise* to meet competition—we said it must be strictly pure—we meant it—and we have stuck to it. It is 100% pure when it is made—100% pure when it is sold—100% pure when it is used—that means 100% more satisfaction to the purchaser.

¶ The greatest secret of success in building up a permanent paint business, Mr. Dealer, is in selling a paint that merits and wins repeat orders—the 100% more satisfactory kind. Write today for our way of assisting the dealer—it means more profit and more business for you.

BOWSER

LONG DISTANCE SYSTEM FOR HANDLING GASOLENE OR KEROSENE

meets the highest approval because it is SAFE. Every feature of the Bowser Long Distance Underground Storage System is endorsed by the most careful insurance companies and fire underwriters.

Here is the Plan. The oil is stored in a tank buried outside, any distance that you may desire away from the building. The tank is made of good heavy sheet steel, riveted and soldered, tested and guaranteed leak and evaporation proof. It is painted with three coats of asphaltum which absolutely prevents the damp earth from acting upon the metal.

The pump is the latest improved, all metal, and measures accurately, gallons, half gallons or quarts at a stroke.

The System Has Never Caused a Fire, nor has an explosion of a Bowser Tank ever occurred. One hundred and eighteen outfits passed through the San Francisco fire, and not one explosion resulted. Some of the pumps were warped and melted by the heat, but the oil remained in good condition in the tank.

The Bowser System is safe in every way. Write TO-DAY for Bulletin 15G.

CURRENT MARKET QUOTATIONS.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

THE ROSS SPORTING RIFLE

A U. S. Sportsman's Estimate

From all over the world come testimonials similar to the following—each an unqualified endorsement of the Ross Sporting Rifle :—

Uno M. Montin, Calumet, Mich., writes on April 12th, 1909,—

"The Model E Sporter I ordered arrived yesterday. Allow me to compliment you on the excellent and superior finish all through. It is all up to my expectations. I consider it the best value in the shape of a sporting rifle I ever had for my money."

When sportsmen everywhere have this opinion of the Ross Rifle—men who are acquainted with all makes of fire-arms—isn't it more than likely **the demand in your own neighborhood** will increase ?

Make This A "Gillette" Week

Hundreds have yet to buy their Christmas presents.

Hundreds want something neat and good and useful for a man.

Sell them GILLETTE Safety Razors—Standard Sets or Pocket Editions.

There is no more acceptable gift for a man than a GILLETTE—don't let anybody in your town overlook that.

Get your GILLETTE signs out and up.

Make a GILLETTE window display that no one can miss.

Open up a variety of sets on your counters, where every shopper will see them.

Talk the GILLETTE every time you see a chance to make a sale. Add your enthusiastic salesmanship to our special Christmas advertising and the result will surprise you—and fatten your profits.

Here's a brand new talking point.

The London "Lancet," the recognized medical authority of the British Empire, in an article on "Clean shaving as a prophylactic measure," says that it is conceivable that the mustache affords a nursery for organisms, whereas a daily shave acts as a regular antiseptic routine.

The article was prompted by the statement of a contributor to the "Lancet" that he had noticed that clean-shaven persons enjoy a kind of immunity from common colds, or are less frequently attacked than those who cultivate a mustache.

Sell Clark Heaters and Coal

Here's the "BIG HIT" Assortment

2 Leader Heaters
2 No. 5B Heaters
2 No. 7D Heaters
6 Dozen Clark Fuel Brickettes (Best Grade)

Some of these heaters you can sell as low as $1.20 and make a good profit.

The Proposition to Dealers is Mighty Interesting

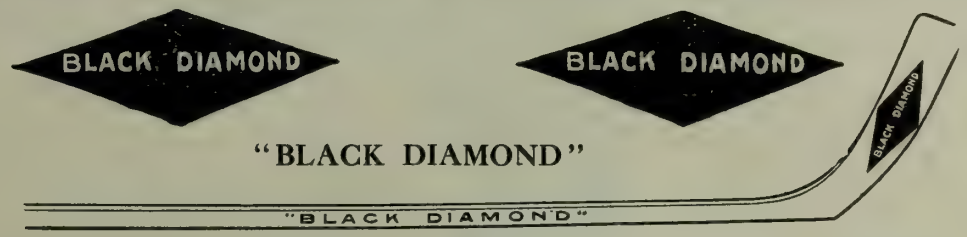
Its a proposition that means ready sales and liberal profits.

Everyone who drives or owns a carriage, wagon, sleigh, automobile—any kind of vehicle—needs them. Everybody traveling in cold weather needs them. The need is known—the demand is positive—It's for the dealer to supply the product and pocket the profits.

Clark Heaters and Clark Coal sell wherever displayed. The wonderful compactness, the unique principe of heat distribution, the neat appearance, the low price—all are factors that make Clark Heaters the unchallenged leaders.

Our guarantee goes with each, and the guarantee protects the dealer and the consumer.

And the coal is just such another proposition. To **prove conclusively** that it's better than other fuel, we give a guarantee, **with each brickette,** that it will give 25 per cent more heat than any other heater fuel made.



DEALERS——ACT NOW

The season is on. Send for the "Big Hit" assortment and add more dollars to your profit. Send to your jobber. Put a heater just inside your store—where customers can **feel** the goodness of it. "Warm them up" to the necessity of buying from **you.** We'll help.

CHICAGO FLEXIBLE SHAFT COMPANY, 250 ONTARIO STREET, CHICAGO

"Big Hit"

HOCKEY STICKS

The national winter game has assumed such large proportions that we have this year increased our line of Hockey requisites considerably. To customers who are looking for the **"very best,"** we are this year submitting a new line of Hockey Sticks—"The Black Diamond"—made from the best selected second-growth rock-elm. It is kiln-dried in a way to hold its full strength and lasting qualities. For shape we have combined the ideas of Hockey stars who, last year, played in the World's Championship series. "All Black Diamond" Hockey Sticks **are fitted with pin-riveted blades**, ensuring lasting qualities, and will stand rough usage. The blades are knife-edge style and extra high. The handles are hand-finished. These qualities combined go to make the **very best.**

Merry Christmas

While the world keeps festival, we unite with our friends in good wishes and good-will, extending to all the Compliments of the Season.

Never before have our customers had such a holiday trade, and never before have we had such handling of goods. And it affords us gratification to say it—never before has there been such adequate service at this end and such general satisfaction.

1909 has been one of the best of years, and never before have general business conditions been more promising than right now. That means new enthusiasm and encouragement all along the line.

Welcome to Christmas!

"JEWEL" STOVES and RANGES

The Ideal Jewel Heater With Its New 1909 Dress

Dress does not make the man, neither does it make the stove, but it certainly improves the appearance of both man and stove.

The Ideal Jewel has been on the market for a number of years and proved itself a Perfect Heater in every way. Now, that it has been redressed, it is one of the handsomest and most thoroughly reliable heating stoves on the market.

Mr. Stove Dealer—If you expect your full share of the fall trade you must keep your stock up-to-date. The Ideal has every modern improvement known to the stove trade. With or without oven.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, munufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

Tickets on sale December 16, 17, 18, 1909; January 21, 22, 23 and 24; February 15, 16, 17, 1910; good to return within three months.

ROWE Sanitary Lavatory

A MODERN LAVATORY WITH OUT PLUMBING EXPENSE

The Rowe Sanitary Lavatory costs less than washstand, bowl and pitcher, and is infinitely more convenient. Looks just like a running water lavatory and is practically as useful. Consists of a rustless, galvanized iron tank, with plate mirror front; white porcelain basin; galvanized iron pedestal, enameled white inside and out; nickel-plated brass fittings, nothing to break or rust. Perfectly sanitary. Placed anywhere without injuring wall or floors. Indispensable in country houses, hotels, etc.

AGENTS WANTED EVERYWHERE.

Live dealers can secure sole agency for locality by applying now. This is the best proposition on the market to-day.

The STEEL TROUGH AND MACHINE CO. Limited

TWEED, ONTARIO

THE

"DAISY"

INDOOR SANITARY EARTH CLOSET

Meets a very long-felt want and should be in every house where a water closet is impracticable. It is neat, compact and ventilated, and being made of metal, it cannot be permeated by any odours. Every hardware man should handle this rapid seller.

PRICE $10.00

Liberal Discounts to the Trade. Send for Circular.

THE TORONTO FURNACE & CREMATORY CO., Ltd.

72 King St. East, Toronto.

THE WHITE MOP WRINGER

is a simple device which fits any pail without fastening, and presses the mop very dry by a gentle pressure on the lever.

EVERY HOME NEEDS ONE

Eliminates the hard, unpleasant and unsanitary part of mopping. One "White" sold sells several more.

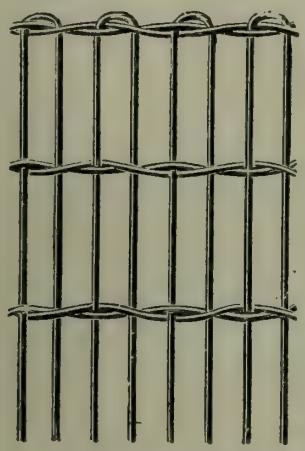
EACH WRINGER IS WARRANTED

MADE IN CANADA

Order from your jobber or from us.

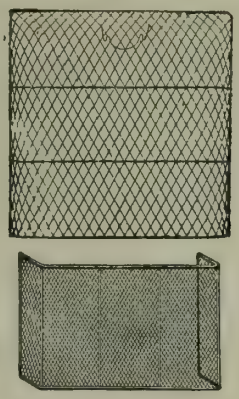
WHITE MOP WRINGER CO.

Fultonville, New York

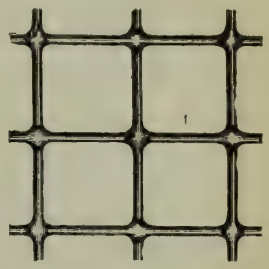


This Trade Mark Insures Genuineness Originality Perfection Satisfaction

There's a Steady Demand for Wire Goods!



We can show you how to satisfy that demand and make a good profit out of the deal if you are handling



CANADA WIRE GOODS

We are makers of every kind of Iron, Steel, Brass and Copper, Wire Cloth and we are prepared to quote you on wire work of every description, crimped or pressed.

Our line of Spark Proof Fire Guards and Fenders is complete and of the highest quality.

Do not fail to get our prices before ordering. We know we can convince you of our values. Let us give you the chance to do so.

We take this opportunity of wishing our many friends and customers in the hardware trade a Very Merry Christmas and a Happy and Prosperous New Year.

Canada Wire Goods Mfg. Co., Hamilton, Ont.

A Defence of the Warm Air Furnace.

Charles F. Prizer, in an address Before the Federal Furnace League, Answers Criticisms of Warm Air Furnace Warming by Advocates of Other Forms of Residence Heating—The Importance of Ventilation Overlooked.

The situation in the field of residence heating, which furnishes a mission for our organization and provides scope for its activities, may be summarized as follows:

Healthful heating necessarily involves ventilation, and any method of heating which does not provide for or is not accompanied by adequate ventilation is unwholesome and essentially unsound in principle.

There is but one practical method of healthful heating a residence, and that is pouring pure warm air into its apartments. This method is accomplished in a more practical manner and at a lower cost by the warm air furnace system than by any other system in existence.

Direct steam or water heating is condemned by every competent heating and ventilating engineer, and by every physician who has given the matter even the most casual consideration, as being unsanitary and wholesome, because houses heated by direct radiation cannot be properly ventilated. To heat residences by indirect steam or water is so costly, both as to the expense of installation and as to that of maintenance, that this healthful and proper method of heating cannot be considered in connection with one house out of a thousand.

We are entering an era wherein hygenic considerations are assuming in public opinion that high position which their surpassing importance entitles them to occupy. As this hygienic awakening proceeds intelligent people everywhere will insist upon having their houses so constructed and so heated as to provide for formal, adequate ventilatioi, until finally the ventilation of residences will become the vogue and it will be considered a barbarous and uncivilized thing to construct a human habitation without providing for changing and renewing the air.

Furnace heating has been discredited in the past because of poor unscientific, impracticall installation, and the extensive use of cheap, flimsy constructions. Furnace heating can be rehabilitated in public esteem by strictly first-class installation and the use of high grade apparatus. Furnace heating of the highest grade accompanied by formal ventilation can be provided for a residence heating shrdlu cmfwyp hm hmm dence at as low a cost as that of the inferior, unsightly and unsanitary method of heating alone, without ventilation, by means of a direct radiation system. Residence heating can be captured for the warm air furnace system if the installers of furnaces can be taught to do their work aright and to use first-class furnaces of sufficient capacity.

Not one of these statements can be controverted nor has there been any serious attempt made, so far as I know, to controvert any one of them, though the activity of our organization during the past year has undoubtedly inspired certain "pleas in avoidance" which have been issued recently by interests which evidently fear they would suffer by the growth of the warm air furnace system of heating.

In an uncopyrighted pamphlet entitled "Home Sanitation," published by a company engaged on a large scale in the manufacture of heating apparatus and appliances, is illustrated anew the truth of Cacaulay's observation that if it seemed to the advantage of any considerable financial interest to deny the correctness of the principle of gravitation, that the most obvious of all great physical laws would be disputed with ardor and persistence. The efforts in this pamphlet to score points against the warm air furnace system are calculated to excite the mirth rather than the resentment of those who desire to promote the healthful heating and ventilating of the homes of the people. Those who live in houses which are healthfully heated by properly installed warm air systems and the prominent physicians who have testified that direct steam and hot water heating exert an unfavorable effect upon health, as compared to furnace heating, will rub their eyes when they read the startling statements of the pseudo scientist who so gaily enters the lists in behalf of direct radiation heating.

Objections Answered.

I venture to quote the objections to warm air furnace heating as set forth in this pamphlet, and to attempt to answer them:

It is claimed that "the moisture of the air is exhausted by passing over a frequently overheated firebox."

The "frequently overheated firebox" does not exist in a properly proportioned and properly installed warm air furnace plant, as the furnace has sufficient capacity to perform its functions without superheating the firebox or any other part of the apparatus. However, the atmosphere in a room heated by pouring into it air which has passed over very hot surfaces will show just as high a humidity as will be shown in another room heated by direct radiation, provided both rooms are unoccupied. If both rooms be occupied by a number of people the room heated by direct radiation will show the greater relative humidity, but this is due to "moisture" deposited in the air from the lungs, respiratory passages and bodies of the occupants; and this additional moisture stays in the room because the air is not changed and renewed, as is done in indirect heating.

The effect upon the relative humidity in a house or raising the temperature from zero or from any other temperature to 70 degrees or to any other standard is the same, no matter what method of heating is employed, provided the air is not in some manner charged with additional humidity after being heated. It is much easier and more practical to humidify the air in connection with a warm air furnace system than in connection with either a direct or indirect system of steam or water heating, and there are now on the market most excelent automatic devices for providing a proper standard of humidity in connection with furnace heating, while there are no devices procurable which perform the same office in connection with direct radiation heating. Indeed, it is practically very difficult to impart an increased degree of humdity to apartments heated by direct radiation.

Gases and Sulphurs.

"Poisonous gases come from the contact of organic particles with the superheated firebox."

The "organic particles" referred to in this subtle assertion must be contained in the cold air supplied to the furnace. In good furnace practice this air supply is the purest obtainable in the space immediately outside the house and we deny that it breeds poisonous gases when heated. Were it not for the high authority under which the treatise is issued, we might almost suspect that the learned author was straining himself to make out a case.

That "sulphur escapes from the burning coal through the iron surface when overheated." With a proper furnace and properly installed plant the "iron surface" need not be overheated, but even if heated to 1,500 degrees the sulphur will not escape through it into the air chamber, because even if any gas or air can pass through the iron at that temperature it would pass inward into the combustion chamber and not outward from the combustion chamber. In actual practice the objection referred to is never encountered, because it has no existence.

"Cellar air is drawn through the house if the cold air box is for any reason closed."

A properly constructed cold air duct is perfectly tight and cellar air cannot, under any circumstances, pass up through the furnace. However, it is far more healthful to use a cellar air supply in furnace heating than to heat a house by direct radiation, because the air in the cellar must be constantly renewed from outside or there would be no upflow of air through the furnace.

Contradictory Objections.

"Unwholesome gases which lie near the surface of the ground are drawn upward if the cold air box is open."

So it appears that we get bad air from the cellar when the cold air duct is closed and bad air from the outside when the cold air duct is open; hence the only logical conclusion must be that it is extremely dangerous to heat a house by air taken from outside and that the only healthful system is to heat over and over again the nice pure air inside the house, which has been duly tempered by the breaths of occupants and other agencies carefully preventing its comtamination by any admixture with air from the outside. If the air near the ground is not of good quality in certain localities the competent heating contractor would take the air from a plane high enough above the surface to avoid the contaminated stratum, though we strongly suspect our ingenious author of drawing on his imagination for the supply of "unwholesome gases which lie near the surface of the ground."

"The dust from the cellar and the dust from the streeet."

There is no correct way to heat a building except to take air from outside, warm it and pour it into the apartments. If this air is liable to contain dust or smoke it should be thoroughly cleaned, and there are a number of plans and devices which do most thoroughly clean the air of dust or smoke and which are in common use in many localities. To maintain a state of even tolerable freshness and purity the air in a house must be renewed from outside; there is no alternative, and our acrobatic logician fails to frighten us by threatening dire dangers from allowing outside air to enter our homes.

"In a short time in the life of the fire-box of the furnace the cement of its seams becomes loosened, through warping, cracking or burning out, and dust and gases permeate the house."

Properly constructed furnaces do not have any "seams" and they do not have any cement in their scientifically constructed joints. The joints of the best furnaces are thoroughly packed with asbestos gaskets or packing, and are absolutely and permanently gas and dust proof.

Importance of Fresh Air.

For all except those who are extremely wealthy there is practically no other way of securing complete and healthful ventilation except in connection with the warm air furnace system of heating. It is not necessary, therefore, to argue with the man who desires ventilation in favor of the warm air furnace system—he will choose that system of his own accord.

The furnace dealer should be thoroughly posted on the rules and principles governing ventilation and on their relation to the heating problem. He should be able to present promptly and convincingly the facts which prove that furnace heating is in every respect superior to direct steam or water heating. He should endeavor, wherever possible, to include in his contracts a formal system of ventilation in connection with his heating proposals.

If the value of a proper ventilating system is clearly presented to the prospective purchaser, he can usually be induced to include the necessary details for a ventilating scheme in his plans and specifications. It is a current notion that a larger furnace is required and more coal will be consumed when a ventilating plan is incorporated into the building in connection with furnace heating than would be the case where there is no formal provision for ventilation, but this idea is erroneous. On the contrary, less fuel will be consumed and the building will be more easily heated and the warm air will be more thoroughly distributed with a proper ventilating system than without.

Escape of Room Air.

Last winter the writer made a number of tests of furnace heating jobs where there was no formal ventilation, with the object of ascertaining the reasons for the variations that exist in the velocity of the warm air at the different registers in a house, and he arrived at the conclusion that one of the main causes of these variations is the differences that exist in the facility with which the air can find an exit from the rooms to allow the warm air to flow into them.

In furnace heating where there is no ventilating system the warm air usually flows into the rooms against pressure. Under average conditions enough warm air enters the room. Therefore air must be forced out of the room very rapidly through any crevices, cracks or openings that may exist.

When the outside wind pressure is strong, it is often difficult to force air out of the crevices against this wind pressure and, therefore, the flow of warm air into the rooms under such conditions is sometimes retarded to the extent of seriously interfering with the heating of the room. But where there is systematic ventilation and the air is taken out of the room in proper volume through a ventilating duct, the pressure against the inflowing warm air is prevented and the room is heated evenly and thoroughly.

It is apparent, therefore, that while ventilation must exist when a room or building is being heated by a warm air furnace even where there is no formal provision for ventilation, yet a correct ventilating system will facilitate the proper distribution of the heat, will save fuel and will induce a more thorough ventilation.

Furnace dealers should, therefore, be taught to insist upon the necessity of having ventilation in the home and should make the most of the great fact that with furnace heating alone it is at all practicable to have any proper ventilation in the great majority of houses. And they should further be taught to advocate the installation of a formal, systematic plant of ventilation with every furnace contract upon which they figure.

HARDWARE LETTER BOX

Any question on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

FIRE PLACE GOODS.—J. R. Myers, Stratford, asks where he can secure brass coal hods, fire irons, etc.

H. F. McIntosh, 28 Toronto Street, Toronto.—Editor.

SHEET IRON SCRAP.—Soren Bros., Toronto, ask where they can sell tin plate and sheet iron scrap.

This commodity is marketable only when packed and sorted. Scott Metal Co., Queen and Sackville Streets, Toronto, are buyers.—Editor.

WEATHER STRIP.—J. H. Worsell, Goderich, asks where he can purchase weatherstrip for bottom of doors, with a spring on each end, also where charcoal can be bought.

The International Weatherstrip Co., 399 Wellesley Street, Toronto, and the Standard Chemical Co., Toronto.—Editor.

WIRE CHICKEN COOPS.—McKillop & Ferguson, West Lorne, ask where they can purchase wire chicken coops for exhibition purposes.

Canada Wire Goods Mfg. Co., Hamilton, and the Dennis Wire & Iron Co., London.—Editor.

Ice Plows.—McKillop & Ferguson, West Lorne, ask for the names of makers of ice plows.

The Gifford & Wood Co., Hudson, N.Y. —Editor.

Harry Forrest who has been in charge of the shovel factory in Montreal, of Geo. Woolfe & Sons, Bathgate, Scotland, has returned to headquarters.

A. Lemieux, Henryville, Que., has been a caller on the Montreal hardware trade.

Thomas Fisher, a prominent Montreal painter and decorator, died suddenly last week at Cincinnati, Ohio, where he was attending the biennial convention of the International Association of Painters, Decorators, and Paperhangers, of which he was the sixth vice-president.

Planning a Building to Get Low Insurance Rate

Why Architects Should Confer With Competent Insurance Men — Instances Where Savings Well Worth While Have Been Brought About—Avoid Carelessness in the Store—Watch Negligent Tenant.

When a merchant or manufacturer, at an expenditure of $500, reduces his fire insurance rate by 28 cents on every $100 of his $30,000 policy, he has all of the elements of a good investment if he will only look at it that way.

"There are many business men who feel that, to investigate their own interests in the matter of insurance, is only courting additional expense," said an insurance man to The Canadian Grocer. "It is easy for them to ascertain that such an attitude is certainly not to their advantage.

"The same may be said of the insurance man who considers that conditions which maintain high premiums are the more desirable. The agent who knows his business, that his people are getting good value for their money, that they are fully aware of the weak spots in their risks and what they must do to improve them. The agent who takes the greatest interest with the object of bringing about improvement of risks where possible, even though premiums may thus be reduced, and not be afraid of competition. He will show the business man that significance of the good and bad risks, not only in their individual application, but also to the community—from an insurance standpoint."

The Agent's Duty.

The above statement coming from an insurance man is important, since it indicates that it should be the agent's duty to afford the insured every facility in posting himself upon details of his risk and rate.

Inquiry by this paper goes to show that there is greater investigation in this matter at present than ever before. In some of the larger towns and cities considerable reduction in rates have been brought about as the result of conference between insurer and insured. In every case reductions in rates have followed recommended changes, and these have always made for improvement in premises.

One instance in particular may be cited. Prior to changes a merchant had a rate of 93 cents. He figured that this was rather high and consulted an insurance agent. The building was inspected. It was recommended, as a result, that his freight elevators and stairs be properly enclosed, and the entrance to cellar protected. He had this done and his rate dropped from 93 to 72 cents. Then he installed pails and a stove-pipe and roof hydrant, and his rate fell to 65 cents, or a saving of 28 cents on every hundred dollars' worth of insurance. This, considered in its proper relation to outlay, was well worth while. There are many such instances.

One thing should always be borne in mind by merchants or manufacturers when about to remodel their old premises or build anew. Plans should be submitted to a competent insurance man in order that the essentials of low insurance rates be not overlooked. Too often is it the case that after a fine building has been completed, the owner has found that he has not done himself justice in this particular.

In striking the rate, the insurance man figures upon merits and demerits as compared with requirements in a standard building. This is one having walls of brick or stone (brick preferred) not less than 12 inches thick (one and one-half bricks) at top storey, 16 inches if stone, extending through, and 12 inches above roof in parapet, coped, on all sides, and increasing four inches (one-half brick) in thickness for each storey below to the ground, or of an equivalent average thickness, the increased thickness to be utilized for beam ledges, or wall corbelled to provide same.

Elevators and stairways cut off by brick walls, or by concrete plaster on metallic studs and metallic lathing, continued from basement up through roof, communication at each floor protected with approved tin-covered doors or metal doors with wire glass if lighting is necessary; sills to be incombustible, skylight over elevator to be of thin glass with approved wire guard over; all weights, cables and other elevator connections except motor to be enclosed in elevator shaft; skylights not permitted unless of wired glass set in metal frames; floor lights to be not less than ¾ of an inch thick; windows and doors on front, sides or rear of building, when exposed, to be protected by approved tin covered doors and shutters (shutters must be arranged that they can be opened from outside), or wired glass in metal frame, or a water curtain. Windows are exposed when within 100 feet of another building.

Heating by hot water or steam at low pressure.

Lighting by gas with rigid fixtures.

Interior finish, open, or lath and plaster, or metal.

Wood or other combustible finish prohibited.

Where departure has to be made from these requirements, the builder will not be safeguarding his own interests if he fails to ascertain the best possible substitute.

Negligent Tenant.

Owners of leased buildings should see to it that their tenants understand the penalties which attach to carelessness in disposing of refuse. Not long ago a serious fire started in a large clothing establishment in Toronto. The inspector visited the place, and there was no way to account for the blaze; it was finally attributed to a live wire. This is a somewhat uncontrollable thing, but in an adjoining room the inspector found a pile of stove ashes. The tenant had no explanation. He had been too lazy or too busy to cast the stuff out and what the inspector said to him was a shame. While the cause of one blaze was undiscoverable, that which might have brought the fire to the scene again at any time, was found in another part. It is carelessness which makes much of the protective equipment necessary.

Regular inspection of his building by the merchant is a good plan by which to safeguard against negligence of employes. Back yards, bottoms of elevators, cellars, window recesses, dark corners, combustible materials left unprotected—all of these things and scores of others must come under the managerial eye. Warning notices should be posted up where necessary. Little things may easily make big totals in the insurance account.

FIRE DID BIG DAMAGE.

Kidd & Clements, Wapella, Sask., announce that the statement was incorrect that the loss sustained by them owing to the fire on Nov. 23, was covered by insurance. Their store building, of solid brick construction, 100 x 38, was burned to the ground, it costing $15,000, on which there was $6,000 insurance. The stock was from $10,000 to $12,000, insurance $7,000, with $1,500 to $2,000 salvage. Fixtures were worth from $1,500 to $2,000, with no insurance. Mr. Kidd, who occupied the flat above the store had personal effects valued at $3,500, on which there was $500 insurance. The loss, it will be seen, was very heavy.

HARDWARE PATENTS.

The following is a list of patents issued by the Canadian Patent Office on Nov. 30, relating to hardware and metal, furnished by Fetherstonhaugh & Co., 5 Elgin St., Ottawa.

122156. J. C. Hooper, A. W. Bratt, Brunswick, Md. Hose pipe couplings.

122180. F. J. Moran, New Britain, Conn. Shelf brackets. Stanley Works.

122187. T. H. Farmiloe, Detroit, Mich. Shovels.

122199. F. O. Smith and F. X. Rosseau, Detroit. Wire fences.

122206. L. V. Aronson, Newark. Combination wrenches.

122219. W. H. Carr, Minneapolis. Combustion tools.

122226. W. R. Clarkson, Tenino, Wash. Swivels.

Weichel, Elmira, and J. R. Hambly, Barrie, executive committee; Weston Wrigley, 10 Front St. E., Toronto, secretary.

Toronto Retail Hardware Association—Samue Pearsall, president; Joseph Harding, secretary.

Ottawa Retail Hardware Association—R. Mulhall president; J. G. Cowan, secretary.

INTERVIEWED INSURANCE INSPECTOR.

A deputation consisting of J. Walton Peart, chairman of the Mutual Insurance Committee of the Ontario Retail Hardware Association; D. Cinnamon Lindsay, and Secretary Wrigley, Toronto, interviewed J. Howard Hunter, inspector of insurance for the Province of Ontario, on Wednesday, December 15. A lengthy typewritten statement was read by the deputation and after discussing various points, left with him for consideration and investigaton. Mr. Hunter has been the guardian of the insurance laws for over a quarter of a century and is very critical towards any innovaiton. Notwithstanding this, however, he seemed impressed by the arguments presented and asked to be furnished with information on one or two points, promising to give the whole matter careful consideration.

The committee will pursue the matter further and hope to have an interesting report of progress to make before the convention at London in February.

WILL SAVE $27,000.

Indiana hardwaremen have within the last two years more than doubled the amount of policies carried in the hardware mutual companies, and at this time have policies in the hardware mutuals amounting to over $3,000,000, on which the members of the Indiana Retail Hardware Association will save in 1909 over $27,000, basing the estimates upon the regular old line fire insurance rates.

This is a nice sum to go back into the pockets of the retail hardwaremen in one state during one year and it is money which would be added to the profits of the old line insurance companies if it were not possible for the hardwaremen to insure in their own mutual companies.

It is possible for a member of one of the retail hardware associations in the United States to insure in hardware mutual fire companies up to $30,000 in the eight existing companies. These companies accept insurance at the same rates as the old line companies and then give cash rebates to insurers each year, two companies rebating 50 per cent., one 40 per cent., four 33 1-3 per cent. and one 25 per cent.

The Retail Hardware Mutual Fire Insurance Company of Minnesota, organized in 1899, is the oldest of the eight companies and at its annual meeting in March, 1909, M. S. Matthews presented his report as secretary, in part as follows:

"An analysis of our insurance statement shows that although fire losses were slightly above the average of previous years, expense, with a rapid gain in volume of business written, has fallen off 2 per cent., thus equalizing the excess in losses. The raising of the limit of risk one year ago probably had much to do with the favorable showing made, as it had the effect of decreasing the expense ratio, and although this company now has several hundred risks on which it is carrying from $3,000 to $5,000, you will notice in the list of losses none above $3,000.

"The lesson in this appears to be that the risks on which the increased insurance was placed are decidedly of the better class. One peculiar feature is that fully 70 per cent. of the fires causing losses to this company originate outside the plant of the hardware merchant, so if our members had no 'exposures,' the losses would be trifling.

"The month of January was an unusually severe one for this company, 10 losses being paid, amounting to $8,000, so that the figures presented by your auditors February 1 are but slightly above those given in the annual report to the Insurance Department December 31.

Cash on hand February 1 was $155,667.41, with gross assets of $174,895.45. Insurance in force amounts to $8,860,373. Since February 1 the losses have been light, and only two small damages of less than $100 remain unadjusted.

Cash on hand February 20 shows a balance of $159,094.32.

The return premiums for 1908 were $55,677.85 and the gain in surplus $25,527.10, making a total profit in the business of $81,204.95.

Insurance on Household Goods.

In the matter of insurance on homes and household goods, it would appear that with the present volume of business, a larger percentage of it should be of the class mentioned. Among underwriters it is considered very desirable, and 25 per cent. is the customary commission to local agents. The experience of this company on such has been extremely favorable, as in four years only one serious loss has been sustained and one slight damage.

Tornado Insurance.

Another branch of the business into which this company has not entered and which might be worthy of your consideration is that of tornado insurance. The premiums are not great, but it is business that is much sought after by the stock companies and the commissions are large. Probably many of you are carrying such insurance and for those who are looking for protection of this sort the small premium required, with the customary return premium at expiration, would make it so cheap that a large majority of the members would be likely to call for such policies.

The financial standing of this company is now so well established that the new business offered is of a constantly increasing volume, and many applications are presented each week which, under the rules, cannot be written in this office. With the rapid increase in surplus and interest gains and decreasing expense ratio, it would appear that the prospect of a continuation of the present 50 per cent. dividend is most excellent.

The Minnesota company has issued a statement up to December 3, showing cash assets amounting to $207,000. Any Ontario hardwareman desiring to verify this information can secure copies of the reports, sample policies, etc., by writing M. S. Matthews, Metropolitan Life Insurance Building, Minneapolis, Minn.

STRENGTH IN UNITED ACTION.

In an address by Frank A. Bare, secretary of the Ohio Retail Hardware Association, at a recent hardware convention in Missouri, he said:

"We retailers do not realize our strength in united action. I happen to know of a little political matter that came up in a certain State not many weeks ago, and the men who were very anxious to see it go through successfully were shrewd enough to go to men who were well acquainted with the hardware

merchants in that State. They made out a list of the towns where the hardware merchants are leaders in local affairs, and in some cases men were sent out to interview these hardwaremen and explain the case to them. The long distance telephone and the telegraph were put to work, and by this plan of getting united action among people who are able to mold public opinion, this political matter was put through without any trouble. The hardwaremen are leaders in every town. They are mayors or aldermen, members of school boards and library boards and other local bodies, and if you want to get started right in any movement for the good of a community or the people at large go to the hardware merchants of the country."

Mr. Bare's statement has been proven to be true in Canada, retail hardwaremen taking the lead in many public questions. For instance, the proposed C.O.D. parcels post bill was withdrawn the House of Commons three years ago on account of the active opposition by retailers of all classes led by the retail hardware associations. And again hardware retailers are taking an active part in opposing the efforts of the Fire Underwriters' Association to secure an amendment to the Dominion Insurance Act which will give them a veritable monopoly. Letters of protest are now being sent to Members of Parliament and Senators by hardwaremen in all parts of Canada and there is every reason to expect that their efforts will be successful.

During the past week the Dominion Marine Association placed itself on record with the lumbermen, the manufacturers and other associations who are opposing the establishment of an insurance monopoly in Canada.

J. H. Connor & Son, Ottawa, have arranged to make a display of washing machines, etc., at the Exhibition of the Retail Hardware Association Convention at London.

How to Figure Profit on Stock Turnover

The Importance of a Right Percentage Basis—Error in Figure Gain on Cost Instead of Selling Price—Net Profit to the Dealer—Examples Which Prove the Process—A Table Descriptive of Proportions. By Howard R. Wellington.

A merchant is obliged to do business under a very heavy expense, say 25 per cent., and decides that for the present he cannot add more than 25 per cent. to the net cost of his goods. He is under the impression he will come out all right and can increase his margin from time to time. He is under the impression that he will neither make nor lose on this basis, but will break even. He does not stay in business very long, and the reason why will be found in the following illustration: Supposing the cost of his goods to be $100, he will add 25 per cent. for profit, making his selling price $125. But his expenses are 25 per cent., and as these must always be figured upon selling price, he realizes that from the $125 must be taken $31.25 (or 25 per cent.). The net proceeds of sale are, therefore, $93.75, a loss of $6.25, or 5 per cent of his sale price.

Again, supposing his cost of doing business is only 10 per cent., and that he advances cost of goods 25 per cent. for profit. It will work out this way: Cost, $100; add 25 per cent. for profit, gives $125 selling price; less 10 per cent. of selling price for expenses, $112.50 net proceeds; $12.50, net profit, or 10 per cent of selling price.

Another example, to make the process of calculation still clearer: Cost of doing business, 10 per cent.; advance on cost for profit, 50 per cent; selling price, $150; $15, or 10 per cent. for expenses; net proceeds, $135, less cost, $100, makes profit $35. Selling price divided decimally into profit gives 23½ percentage profit.

The accompanying table may be of value to merchants. The top row of figures represents the cost of doing business, while at the right side is percentage to be added for profits. The horizontal columns show profit percentage on selling price as figured from top and side figures. Take the first example. Say that the cost of doing business is 10 per cent., and that 25 per cent. is added for profit. Selling price $125, less 10 per cent., or $12.50, for cost of doing business, gives $112.50 net proceeds. The selling price divide decimally into the net profit gives percentage of profit, which in this case is 10 per cent.

Goods advanced 25 per cent., and selling at an expense of 25 per cent., show a loss of 5 per cent.

If an article costs $100, and is sold for $150, the cost of doing business being 25 per cent., the result is not a profit of 25 per cent., but 8⅓ per cent.

The process is this: Subtract cost from selling price the difference, of course, being profit. Divide the latter decimally by the selling price and the result will be the true profit. In other words, ascertain what proportion of sale was or would be profit—never try to arrive at percentage of profit by adding to cost a percentage of that cost equal to the amount of profit desired, or, by adding 50 cents to a dollar, assuming that the profit will be 50 per cent. The profit must be reckoned on the selling price.

To effect a given profit on the sales, the percentage to be added to cost is as follows:—

5 per cent. added to cost is 4½ per cent. profit on selling price; 10 per cent. added to cost is 9 per cent profit on selling price; 20 per cent. added to cost is 162-3 per cent. profit on selling price; 33 1-3 per cent. added to cost is 25 per cent. profit on selling price.

Any criticisms of the plans suggested will be welcomed.

—Cost of doing business—

A Table That Will be Found of Service in Figuring Cost of Doing Business and Profits. The Top Line of Figures Represents Percentage to be Added for Expense in Selling, While the Vertical Column on the Left is the Amount to be Added for Profit. The Horizontal Columns Represent the Net Profit Resulting From Practical Application of These Figures. For Further Explanation see Article.

The Hardware Merchant's Scrap Book.

Extracts From the Pages of Trade Papers on Hardware and Metal's Exchange Table—Points of Interest Discussed From Various Viewpoints—Practical Suggestions for Progressive Retailers.

ANSWERING CORRESPONDENCE.

Hardware dealers, it would seem, are quite generally open to the charge of failing to acknowledge correspondence. This is no doubt due in a great many instances to lack of time and facilities. There are still a great many hardware dealers who do not own typewriters and many of those who do possess them find the work of operating them a laborious task, and one which they avoid whenever it is possible.

Of course, every merchant receives a great deal of mail matter that does not require acknowledgment. In many cases the failure of a merchant to reply to a letter is indicative of a negative reply.

A manufacturer of building material recently stated that out of a hundred letters sent out to dealers regarding prospects obtained at the State Fair not more than thirty acknowledgments were received. And the letters were all sent to retail dealers who had accepted the agency for this manufacturer's line of goods in good faith.

The merchant certainly fails to do his part in the distribution of goods when he does not even notify the manufacturer that his letter has been received. If the dealer cannot find time to follow up the prospect he should notify the manufacturer to this effect. If the prospect is a person whose credit standing is not good and who might not be willing to pay cash for the merchandise, the dealer is not to be blamed if he does not follow up the prospect, but he should at least let the manufacturer know the reasons why his part of the agreement cannot be carried out.

When a manufacturer starts in to make a certain article to be sold at retail he usually follows one of two courses. He advertises his product to the consumer and then having created a demand for his article, makes it necessary for the retailer to stock it; or else he advertises his product to the dealer and helps the dealer to sell it to the consumer. Sometimes he advertises both to the consumer and to the dealer; thus by getting the consumer to ask for his goods and aiding the dealer to push them he is promoting sales toward a maximum output.

It is manifestly impossible for the manufacturer, himself, to personally follow up all of the prospects he obtains from consumers by mail. So he refers these prospects to a dealer who is handling his goods. If no dealer represents him in the town from which a prospect comes he refers it to some dealer of good standing. The article which the manufacturer is advertising may be a washing machine, for example. The dealer may already have one or two good makes of washing machines in his store and does not care to add another line. In such a case the dealer, of course, is not to be blamed for refusing to follow up the manufacturer's prospect, but he should at least be courteous and businesslike enough to acknowledge the manufacturer's letter and state his reasons for not doing so.

The retail merchant should realize fully his importance as a distributer of merchandise and should give manufacturers and jobbers no just reason for asserting that he is a weak link in the chain of merchandise distribution.—The Hardware Trade.

GOOD STORE STATIONERY.

A dealer's stationery forms an important part of his office equipment. Its object is to carry messages and advertise the business. It should, therefore, bear something besides the firm name and address. Stationery will convey some sort of impression, either favorable or otherwise, so it pays to use good quality and have the general appearance neat and dignified. A trade mark or cut of something suggestive of hardware is advisable, as it gives individuality and character.

If the company is a large one, with several departments, the name and office of practically every man prominently connected with the business should appear on the letterhead. Then a correspondent knows who the writer is and the letter possesses a certain personality that is lacking when signed simply with the name of the firm or corporation.

By having the names printed in small type at the top of the page it simplifies the translation of signatures. If there is anything that irritates a busy man it is puzzling over a scrawly name and in the end perhaps makes a poor guess. The writing may be done in long, graceful curves, all run together with shading, which is just as unreadable as the up-and-down variety in which all the letters look alike. We don't know much about the particular traits of character supposed to be revealed in poor writing, but we do know that a man in a hurry wants to read quickly. So it is a matter of self-protection that a company have the names of the officers and anyone else likely to write letters printed on the letterhead, for all of us can't be good penmen.

The details in the makeup of stationery should be given careful consideration, for it offers an excellent opportunity to help you in your business.—Hardware, New York.

DON'T KNOCK.

A few days ago we heard a merchant talking to a customer. He was telling the customer how mean a man his competitor is, and what low and underhand tricks he plays. The customer nodded sympathetically and said "Ain't that too bad?" and "Just so," right along in the right places. When he got away finally, he was joined by his wife and they departed from the store together. We followed them out, and heard the wfe remark, "What kept you so long?" "Oh," replied the sympathetic man, "Smith was telling me how hard hit he was by Jones across the street there. He is a knocker, all right, Smith is. If he can't keep up with the procession he ought to fall out. I hate a man that's always whining." The merchant really thought he was getting sympathy, when all the time he was building up an unpleasant reputation.—The Oregon Tradesman.

A CHRISTMAS WINDOW.

A unique Christmas window was that used last year by the Jas. D. Tait Co., St. Catharines, for two days before Christmas. In the large window on the corner of St. Paul and William Streets was a bedroom with an iron bed covered with mattress, sheets and white spreads taken from stock in the store. In the bed were two colored boys about ten years of age. An arch draped with curtains divided the window into two rooms and in the other room was a fireplace on which hung stockings filled with Christmas packages. Other suitable Christmas gifts to be found in the store were also displayed on a Christmas tree. A man dressed as Santa Claus sat on a chair, with an order book taking orders. He would take a look every once in a while in the room where the two boys were, when they would cover up their heads with the bed clothes. When Santa was not looking they would dance and eat candy and oranges, supplied from the store. Two window cards were displayed, one reading "Will morning never come," and the other, "Joe, I can't sleep; will Santa Claus never come?"

During the two days that this window was displayed a crowd of two and three

deep constantly watched the antics of the boys and Santa Claus, and during the busy parts of the day it was hard to get near enough to see what was in the window. Did it bring results? On the evening mail the night before Christwas a letter was delivered to the Jas. D. Tait Co. for Santa Claus by the mail carrier and one little girl telephoned to the store and asked to speak to Santa Claus. When Santa Claus asked her what she wanted she named over a list. He promised to bring them to her and asked if she was going to bed yet. The reply was that she was just going to have supper but she would go to bed right after and that the back door was being left open so that he would not have to come down the "chimley."—Dry Goods Review, Toronto.

CLIPPINGS ON TRADE SUBJECTS.

In a recent issue we suggested the desirability of keeping a scrap book of clippings or an index of pointers culled from daily papers, trade journals, etc., and which gave any promise of future use.

Few storekeepers have realized the importance of an index containing all information which would be of help to them, contained in the various trade papers to which they subscribe.

In every issue there is apt to be one or more articles in which you are particularly interested—in fact, trade papers are a mine of information; but in reading them it is impossble for one to remember every good thing unless he has some method of reference.

Papers are filed or laid away and when the time comes to use that particular information the paper has either been mislaid or the reader has forgotten in which paper or issue the article appeared.

This means a loss of time going through a pile of papers and you may not find it at all, thereby losing a valuable idea or an imperfect carrying out of a plan from memory.

Trade papers, as a general rule, are read through hurriedly by busy men until something strikes them which they would like to dwell on a little later.

Wouldn't it be a hundred times better if each particular article were indexed so that you can lay your hands on it at any future time at a minute's notice?

The idea of which you retain but a faint recollection is brought before you in a clear manner once more. One index will serve to cover all papers, so that it will not be necessary to have more than one index for reference to everything he has been interested in in a trade paper.

Identification marks should appear opposite each item, showing in which paper it appeared.

If you don't care to go to the expense of a card index, a scrap book will answer the purpose just as well, although a card index is very easily made, as you can buy index card systems for about $2.50 or you can make them yourself, cutting them from heavy cardboard about five inches wide and inserted in an ordinary candy box of suitable size. The division letters should be drawn on large enough so that they can be readily seen. —Farm Machinery.

ILLUMINATION OF WINDOWS.

Much of the advertising value of a good display depends upon the manner in which the window is lighted and the effect of many a good display has been largely lost at night because of poor lighting.

It may be argued by some merchants that there is little to be gained by lighting the windows up well at night, since there are fewer people on the streets, but it must also be remembered that while there are fewer people, there is, as a rule, less to distract their attention. During the day people are usually hurrying somewhere and there are so many things going on that the windows have to be content with a small part of their attention, but at night when people are walking, perhaps for pleasure, the windows have full sway.

There is something particularly attractive about a handsome display brilliantly lighted up and looking cheerful, up-to-date and prosperous.

The most important thing to be considered in lighting the window is to have the light all thrown downward on to the merchandise and not out into the eyes of window-gazers or on the sidewalk. Wherever a light shines directly into the eyes of the spectators it should have a frosted globe, which softens the glare and gives a soft, pleasing radiance without sharpness. There are several excellent forms of show-window reflectors of the "bonnet" type which throw all light from incandescent lamps downward on to the merchandise and effectively screen the lights themselves from the eyes of passers-by.

Frosted globes may be very effectively used on auxiliary lights in the background and if colored may be used in an appropriate color scheme. Frosted globes are also sometimes used throughout the window, when they throw a soft, mellow light over the whole display.—The Twin City Commercial Bulletin.

KEEPING TRACK OF EXPENSE.

The question of expense is a serious one for all merchants, because expenses are getting larger every year; that is, the public demands more than ever before.

Now, many merchants fail to correctly figure the cost of their goods, with the result that sooner or later there comes a crash. Too frequently the merchant fails to include some important fixed charges of his operating expenses. Many merchants fail to charge up interest on investment, unless it is for interest they are obliged to pay on borrowed money. Some do not charge up rent, because they own their store, or if they do charge it up they do not charge as much as if they had to go out and hire it from someone else.

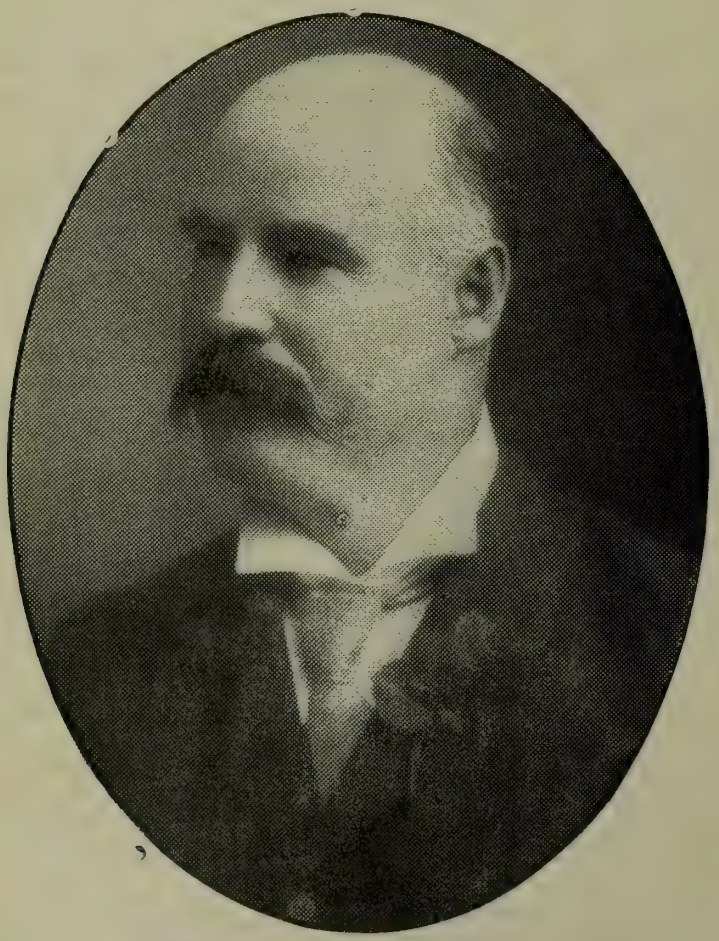
Fixtures are not charged off in a great many instances. The natural life of a fixture may be said to be about ten years. Such being the case, 10 per cent. should be charged off each year. Improvements should be charged off in the same manner. Many a merchant has figured that he was making money, only to find that he was unable to meet his bills as they became due.

Now, the expenses of a store should be organized and subdivided the same as its departments are. Each department should be charged directly with every bit of expense that it actually incurs, such as wages, rent, advertising, department expenses, freight and express, supplies, and such expenses as cannot be charged as general expenses. In this way only can a merchant tell how much a department is making or losing.—Merchant and General Storekeeper.

KNOW YOUR GOODS.

Too much stress can not be laid upon the neecssity of a salesman's reading up" on the goods he has to handle, and though it may seem that in his work he will become thoroughly familiar with everything he has to sell, it is not so. To properly undertake the sale of a rifle, a man should be conversant not only with its working parts but also with its capacity. He should be able to explain the make-up of the different bullets it will shoot and what each cartridge will do. He should understand the various grades of bullets and be able to explain their uses and at the same time have a knowledge of the trajectory, velocity and killing range of the weapon. He should also understand the uses of the different sights and be capable of "talking rifle" like an expert. To do all this he need only spend a little time in a careful pursuance of the several catalogues issued by the different rifle-makers and in conversation with the occasional rifle shooters who drop in to buy ammunition. It will enable him to talk on the subject intelligently and sell more goods. Too many clerks are wont to hand a would-be buyer what he asks to see and then stand in silence awaiting a decision. Such a salesman can tell whether the weapon is a single shot or a repeater, and, by looking at the tag, explain how much it weighs, the length of the barrel, the calibre and the price, but that is all, which is practically nothing. This does not only apply to rifles but to many other lines. Every clerk in a sporting goods store should be able to meet a customer half way and talk to him instead of merely handing out what is called for and taking in the money.—Sporting Goods Retailer.

Hardwaremen Bigger Than Their Business



Some Life History of an Owen Sound Hardware Merchant Who has Represented His County in Parliament and has been Several Times Chief Magistrate of His Town — Did Good Work for His Fellow Citizens in Establishing a Modern Water System—Has Incorporated His Business.

T. I. Thomson, ex-mayor of the town and former representative of North Grey in the Dominion House of Commons, is a man who has at all times displayed a practical interest in municipal and national affairs and his name is known all over the county of Grey, as one of its leading citizens.

Mr. Thomson was born in Napanee in 1855 and in 1880 when 25 years of age, he and his brothers, John and Joseph, purchasing the hardware business of D. O. Bricker at Port Elgin, and conducted this store most successfully for seven years, building up a large business all over the Bruce peninsula. In 1888 Mr. Thomson came to Owen Sound and bought the business of W. B. Stephens. The store occupied the same site as the now commodious premises on East 2nd Avenue, Owen Sound, owned by T. I. Thomson, Limited, of which he is head. Mr. Thomson has never neglected his business, even when occupied with public affairs. The result is that to-day his firm is one of the best known in this district.

In 1896 Mr. Thomson was elected reeve and ably fulfilled the duties of this office for two years. During a portion of this period he gained quite a reputation for himself as chairman of the waterworks committee by introducing the water meter system. There was a great deal of opposition, but Mr. Thomson is a man who can always be relied upon to put up a good fight and on this occasion won out. Under his regime the whole water works service was overhauled and for the first time in its existence put on a proper footing. The system that Mr. Thomson originated for the management of the water works is in operation to-day, and stands as a monument to his executive ability. Mr . Thomson was mayor of Owen Sound for two years, 1897-1898.

A charter was applied for in spring of 1909 and the Thomson business became an incorporated concern, the following being elected officers of T. I. Thomson, Limited: T. I. Thomson, president; Leonard Ferguson, vice-president and manager, and T. Walden Thomson, secretary-treasurer.

T. I. THOMSON, EX-MAYOR OF OWEN SOUND.

HARDWAREMEN IN PUBLIC LIFE.

The near approach of the municipal elections in Ontario and other provinces brings to the front the question of the hardware merchant's duty to his fellow citizens.

Hardware and Metal has frequently contended that merchants should participate actively in the public life of their town, Province and Dominion—that the business man is better fitted to do this work than the professional men, lawyers and doctors, to whom it is usually left.

It is with pleasure, therefore, that we are able to present a sketch of the career of an Owen Sound hardware merchant who has been honored by his fellow citizens on several occasions and who has built up a successful business while giving part of his time to public work.

The Editor will appreciate information telling of other hardwaremen who have shown their "bigness" by going beyond the four walls of their store and undertaking work of public benefit, while at the same time, watching their business closely.

Mr. Ferguson has been in the employ of the firm for the past twenty years and has proved an able and capable manager. He is considered a keen buyer and a man who is thoroughly conversed with every detail of the hardware trade.

T. Walden Thomson, the eldest son of T. I. Thomson was a member of the town council last year. He is a live worker in the business and attends to the outside work of the firm, calling on the mills and factories in this part of the county. He is largely responsible for the growth of the firm in the last few years.

G. T. C.

John Moxon, of John Moxon & Son, hardware and stove dealers, Picton, is dead. He was for years a member of Moxon & Barker, stove manufacturers, but for ten years past has been in business with his son.

Walter Dunn, for the past seven years representing Lewis Bros., Montreal, in the north shore territory, between Sudbury and Kenora, has purchased the Barnes Hardware Co., Port Arthur, and will take over the business on New Year's day.

Business Methods of Canadian Hardwaremen

Vancouver Merchants' System—A Patriotic Window Display—Advertisements on Calendars—Get the Buyer's Viewpoint—Combating the Stove Peddler—

A PATRIOTIC WINDOW.

Vancouver, December 6.—A patriotic window was trimmed by W. H. Jeffery, of McLachlan Bros., Vancouver, on the occasion of the King's birthday, Nov. 9. A beautiful oil painting of King Edward VII. with a very large coat-of-arms in bronze were placed at the left of the window, while on the right was a figure of young Canada draped in a Union Jack with a crown of maple leaves on his head. At his feet was a globe atlas signifying, as the cards read, that a good old flag ruled over an Empire upon which the sun never sets. The centre of the window was occupied by one of the new series of Oxford Chancellor ranges bearing a card "Canada's Three Prudentials, all as strong as Gibraltar," refering to the King, the flag, and the range. In front of the range was a large bull dog. The front of window was trimmed with teakettles and beauty roses while the picture of the King was decorated with shamrock, rose, and holly. A larger Union Jack completed the background. This window, being the only patriotic window in the City of Vancouver, attracted much attention to store.

W. H. J.

COMBATING THE PEDDLERS.

Tillsonburg, December 14.—J. E. Weston, stove merchant, has adopted the plan of fighting the stove merchant with fire, he having secured the agency for a malleable range, which he will display in his store as well as loading a sample on his wagon and make a canvass of the farmers of this district for business. His plan has the advantage of heading off the peddlers and giving the farmers an opportunity of doing business with a local merchant in preference to a stranger who they have not seen before and are not likely to see again.

W. W.

AD. ON CALENDAR'S BACK.

St. John, November 30.—In sending out calendars every year to his customers, a local retailer does not follow the usual custom of having his name printed on the front, but invariably has it inscribed on the back. He claims this is a better advertisement for him than disfiguring the picture on the front. He has a demand every year for more than he can supply as he always selects something attractive and not being marred by an "ad." they are much sought after. These calendars are so much prized and admired that the people who get them usually talk about "Porter's pretty calendar without ony advertising on it," and he gets more advertising than he otherwise would.

The same dealer in sending out orders always marks them with a printed slip bearing his name, address and telephone number and with a space for marking the number of packages in the order. This latter feature enables the teamster to know just how many parcels he should have for that customer, and the names on the slip serves as a reminder to the customer of the dealer from whom the goods were purchased.

THE BUYER'S VIEWPOINT.

Hamilton, Dec. 14.—No fact is oftener lost sight of than that the buyer's point of view is usually as far as the poles asunder from that of the merchant who is trying to sell to him.

Failure of enterprising merchants to realize this is responsible for the fact that often the most carefully and scientifically devised selling schemes have fallen absolutely flat. This is particularly so in comparatively small places, where the mental attitude of the entire community is often practically the same.

It pays for a merchant to take a few hours off now and then and get out among his customers; to talk shop to them—or rather, to lead them to talk shop to him. The resulting light cast upon their view point will frequently disclose pitfalls, which it is profitable for the merchant to avoid.

A phrase that smacked of "irreligion" has often killed the effectiveness of an entire advertisement. In most towns it would be all right, but in the particular town where it is used the religious cast of mind is prevalent. Each locality has its prejudices, perhaps unconscious, but none the less effective. It is worth while for the merchant to know these before he imports a new selling idea, that has worked well in another place, but might not strike the public fancy in his own town.

It is an old superstition that the man with the best technical understanding of a line of goods frequently proves the poorest salesman. One man can take a typewriter to pieces and put it together again, and yet as a typewriter salesman he will fall flat, while another who can't hammer out 20 words a minute or do even a minor bit of repair work will sell machines in a style calculated to keep the factory running overtime. The secret lies in the fact that salesman No. 2 intuitively grasps from the outset the mental attitude of his prospective customer, and instead of bombarding him with technicalities uses just the arguments that will appeal to him—and no more.

It is just the same with the merchant. Arguments that would convince him in a moment would possibly repel his customer, who lacks his technical knowledge of the subject. Conversely, the merchant very often takes it for granted that the Man in the Street understands arguments which, as a matter of fact, are perfectly new to that gentleman and, if brought forward, would prove most convincing.

Hence it will pay the average merchant to study his business from his customer's point of view. His advertisements will probably be more appealing, his window displays more effective, and his whole business system is entirely likely to undergo many changes for the better.

V. P.

VANCOUVER MERCHANTS SYSTEM.

A real bargain in the window attracted many people to Hodgson & Stearman's, Vancouver recently. They had various tinware and graniteware articles in the window, offered at ten cents for each or any. The window was crowded with people, both on the outside and inside, and the large momentary business was greater than was anticipated. It kept the whole store pretty busy to look after the people. It showed how quickly people notice windows, and if on ordinary occasions they pass by apparently without looking, it is because there is not anything there at the time to particularly interest them. All of which means that there should be method in window dressing, with constant changing so that there will be something to catch the eye of everybody. What will not attract the attention of one person today, will be noticed by somebody else. Everyone does not want the same thing at the same time, and the point is to catch the person who wants a thing at the time he wants it. There are few householders who have not in their minds something they need, and who say to themselves, "Well, I'll get that the first day I have time." That day is generally a long time away, simply because he does not bother, but if he sees it in a window it is brought to his mind and often he takes it home with him.

R. B. B.

FROST ON WINDOWS.

Brantford, Dec. 13.—A local grocer is working a good dodge to keep his windows clear from frost. A long pipe, has been inserted about one inch from the bottom of the window, with very minute jets, which, when lit, generate enough heat to keep the frost away, without any danger of injuring goods by too much heat.

A.W.

James Thompson has resigned his position in J. H. Glover's hardware store at Aylmer and accepted a situation as traveling salesman for the Warnock Mfg. Co., Galt. Mr. Leak, of Chatham, succeeds Mr. Thompson in Glover's hardware store.

PUBLISHED EVERY SATURDAY.

A MERRY CHRISTMAS.

Another week and Christmas will be here, and while the weather during December has not been favorable to country merchants, it is hoped that the coming week will be a record breaker, the people generally having plenty of money to spend and it only wanting good roads and cold weather to make the 1909 total excel former years.

The Christmas spirit is being taken advantage of by an increasing number of hardwaremen who realize that although the season is essentially a religious festival and a time for family reunions, that it is impossible to disassociate it from the gift-giving feature which has such an important bearing on the commercial aspect of this holiday season. At no time of the year has the merchant the same inspiration to dress his windows so attractively, advertise so freely, and decorate his store so beautifully as during the closing month of the year, when the opportunity presents itself to close the year with the busiest trade of the twelvemonth. Much, of course, depends upon merchants' foresightedness in preparing to handle the trade in the choicest and most profitable goods as well as in their display and sale.

The past year has been one which most Canadians will look back upon with pleasant thoughts. Farmers have garnered big crops, mechanics have worked overtime and merchants generally have done a business which equals, if it does not excel, the records of any previous year. And the new year approaches with prices on the ascendency in many classes of goods, paint and metal products particularly, being slated for advances for next year's trade. These advances betoken a strong market, a condition which retail hardware merchants will welcome with thanksgiving.

Hardware and Metal has shared in the betterment in conditions which have been the outstanding features of the year fast drawing to a close. The advertising announcements of manufacturers have contained descriptions of many new articles and improvements, and a change has also taken place in the style of the advertisements, many firms having adopted the policy of giving educative talks, descriptive of the selling qualities of the articles illustrated. This is an advance step toward more profitable publicity. Another feature noted in the advertisements is the tendency of manufacturers and jobbers to take advantage of their trade paper's pages, in which to make special announcements regarding changes in the price of their products, as well as giving an expression of their good will at the close of a successful season. In this issue, for instance, a two page announcement is made by a paint manufacturer who gives important market news. While few circular letters would escape the waste paper basket at this season, the hardware merchant will be sure to read his trade paper.

That their Christmas may be a merry one is the wish of Hardware and Metal to every manufacturer, jobber, salesman, retailer, clerk, warehouseman and delivery boy in the Canadian trade.

THE ANNUAL INVENTORY.

The first thing most jobbers and many retailers will do, after the rush of holiday trade is over, will be to take stock. By going at it systematically the job can be done by the first week in January and the rest of that month can be used in revising the system of bookkeeping in figuring out the cost of doing business, and in having an "after inventory" sale ahead of the less progressive competitors. Why let the work of taking stock drag on until the end of January, or into February, as too many merchants do ?

A small hardware dealer will say it is not possible to do the work as it shodld be done in a short length of time, because of his small force. It is as easy for him with three employes to inventory a $15,000 stock in four days as it is for the large jobber with 100 employes to inventory a $500,000 stock in the same length of time. And as a matter of fact, the largest stocks are often "taken" in even less time than four days. This is accomplished by systematic effort.

As far as possible, divide the force into teams of two. One man to call and the other to write down. Wherever practical, have a third man proteed each team counting or weighing and tagging stock. Use the loose-sheet system. These sheets can be held in a binder and turned into the office as rapidly as they are filled. In this way the inventory can be extended as fast as it is being taken and the final results are reached almost simultaneously with the final putting down of the stock. This system has a decided advantage over using a book, as by this method a number of teams can be working at the same time. The sheets should be numbered consecutively. After being footed and totaled, these sheets can be bound and preserved from year to year. Great care should be used in pricing goods.

The most successful merchants take the inventory at current prices. In this way a dealer knows exactly where he stands. Goods are worth no more and at the same time are worth just as much as they would cost if purchased to-day. If nails have advanced, take them at the present price ; if they are lower in price than when purchased, they should be reduced on the inventory. Out-of-date or dead stock should be taken at a sacrifice price.

In the dull January days the inventory can be worked over, and, by comparison with former inventories, dead stock will be brought to light. In the office the work of the inventory will be greatly helped if the sheets are promptly priced.

In small stores, where the cost on goods is marked upon the articles in stock, by far the best way is to call off these costs and put them down on the inventory as the stock is taken. This will not only save time, but also assure accuracy.

It must ever be kept in mind, that in order to have the invoice of stock of any real value it must be taken accurately. This is of vital importance. Some errors are bound to occur, but goods must be counted or weighed, not estimated, and costs should be known, not guessed at.

The importance of taking an inventory at least once a year cannot be overestimated. It is the only way for the hardware dealer to know exactly where he stands, to be able to tell how much net profit his business has made. Going completely through the stock in this way will bring to light many articles which have not moved for twelve months. This dead stock should be now placed upon a separate sheet and a strong effort made to dispose of it.

The job of inventory is one that few merchants like, but if done accurately and with care will be found to be one of the best, most profitable parts of the work in any store.

WHAT IS GOOD ADVERTISING?

The Toronto Globe of Dec. 16, reproduces on its front page, one of the articles published in Hardware and Metal's "business methods" department a fortnight ago on the subject of newspaper versus billboard advertising, and its action in doing so indicates the value of the reading matter published in the correspondence columns of this paper. The Globe endorses the view expressed by Hardware and Metal that billboard advertising is, as a rule, a waste of good money.

The retail merchant is, or ought to be, the best judge of the kind of advertising which brings results to makers of articles sold through hardware stores, and the fact that hardwaremen so seldom use billboards that it is a matter of comment when they do, is indicative of their poor opinion of that medium of securing publicity. Hardware merchants are becoming more and more liberal users of space in their local papers, both daily and weekly, and are finding this a valuable means of securing increased trade.

Where billboards are used by manufacturers, or where other questionable means are adopted to give publicity to articles of general sale, retailers will do well to draw the attention of manufacturers that much better results will be obtained by using the local newspapers.

PHOTOGRAPH HOLIDAY WINDOWS

It is only two more weeks until New Year's Day, when the Christmas window dressing and advertising competitions of Hardware and Metal close. Greater interest than ever before has been manifested in these contests and the result will be profitable and instructive to every competitor.

Hardware and Metal recognizes that merchants in smaller places have not the same facilities as those in the cities, so far as window dressing is concerned, and therefore has divided the field into two classes—towns, villages, etc., under 10,000 population and cities with a larger population. There are three prizes in each of these classes.

This gives retail merchants in the smaller places an opportunity to enter without competing with their friends in the trade who have better facilities in the way of larger windows.

The only stipulation so far as either class is concerned is that the window must be dressed with Christmas goods. In sending in the photograph tell who dressed the window and include a detailed description of how it was constructed.

In the advertisement competition all that is necessary is to forward one or more clippings from your local paper to us with the name of the writer of the advertisement, and the name of the paper it was clipped from. Prizes are divided in this competition in the same way as in the window contest. All entries in each case should be mailed not later than December 31 to the Editor of Hardware and Metal.

A NEW CO-OPERATIVE BILL.

Lloyd Harris, M.P., for Brantford, Ont., has announced that he is preparing a bill which is meant to provide machinery for the incorporation and supervision of co-operative societies.

This bill will not be in the interests of retail trade and especially will it be detrimental to the grocers should it go through. If the merchants were united all over the Dominion, such a pressure could be brought to bear against the passing of any such a bill, that it would scarcely ever be heard of. Nevertheless those who are united can do a great deal and also others who are interested can assist in preventing any legislation detrimental to their interests.

A co-operatipe society working in every city or town will do much to separate the merchant and his customers, even if it does not continue to become a success. Every association and every individual merchant should carefully watch this co-operative bill and make it a point to interview or write the member representing his constituency in the Hodse of Commons to oppose it.

No member of parliament interested in manufacturing goods which are sold by the retail trade should consider it fair to be instrumental in passing a bill that will be detrimental to retailers. Yet what else do we find in the case of Lloyd Harris, of Brantford?

DISCOUNTS INCREASE PROFITS.

While a good many dealers are rarely able to take advantage of the discounts offered by wholesalers for prompt remittance, it often happens that retailers have formulated the custom of taking the full time—30 or 60 days, or more—in which to pay these accounts, and at the same time have the money on account in their bank.

The advantage to be gained if they will pay up these invoices, either when the goods are shipped or at the end of 10 days, and thus save a small percentage by doing so, is an old story. Yet the amount to be thus saved, while seemingly of no account, is only another way of increasing profits. Many retailers realize this, and always observe care in making prompt payments. Others also realize it, but deem it of too little importance and do not heed the advice given them relative to this practice.

The savings which would accrue on $5,000 worth of goods at two per cent. would be $100. Is this worth saving? Most retailers believe it is, and also look upon the matter as an "easer" to their peace of mind with these bills paid. They are then able to devote their energies toward increasing their balances, pushing collections or cutting down expenses in some departments of their store which may need it. This matter should receive earnest consideration, because it opens the way for increased earnings.

It is common for retailers who follow the prompt paying system to keep outstanding accounts down to a lower percentage than those who are accustomed to make use of the entire time which they are ordinarily granted.

LIQUID PAINTS ADVANCING.

As recently predicted by Hardware and Metal liquid paints are billed for an era of stiffer prices. Important changes have either been announced or are contemplated, and it is pretty certain that before long all manufacturers will be in line in demanding higher prices. Some time back manufacturers in the States advanced their prices, and the same reasons which actuated them is now influencing the Canadian manufacturer—the high price of raw materials.

Flax-seed is scarce, and naturally, therefore, linseed oil is steadily advancing, this week showing a 2 cent increase, and it is thought that figures will not stop at this. White lead, one of the fundamental articles used in the making of liquid paints, has advanced during the year some 40c, while other properties such as turpentine, zinc oxide and colors have shown higher values.

Advances in the price of liquid paints, therefore, is only to be expected, and the trade would be well to be prepared for an increase all the way round of from 5c to 10c, and maybe more eventually.

CANADIAN TARIFF DECISIONS.

The Board of Customs sitting at Ottawa, have given recent rulings making wire draw plates used in wire-drawing machines come under the general tariff at 27½ per cent. and Keene's cement and Caen stone cement under the general tariff at 20 per cent. Under the British preference all these goods come in at 15 per cent. Refined petroleum showing a gravity of over .8235 is dutiable at 2½c a gallon; the British preference being 1½c a gallon. As rotary kilns, and revolving roasters and furnaces made of metal and designed for roasting ores, minerals, rock and clay are now made in Canada, they will no longer come in free of duty.

CANADIAN METAL MARKETS

See Itemized Market Quotations on Page 66.

MARKETS IN BRIEF.

Montreal.

Spelter—Advance of 25c.

Linseed Oil—Advance of 2c.

Scrap—Tea lead ¼c advance.

Toronto.

Linseed Oil—2c advance.

Galvanized Sheets — 15c decline on some grades.

Pig Iron—Some imported grades advanced 50 cents a ton.

Tin—Up another cent.

MONTREAL.

December 17.—The only change in the markets this week, is an advance of 25c in spelter. This we anticipated last week, and is only natural considering the strong prices ruling in the primary markets. Tin would probably have shown another advance, but for the weakness which appeared on Wednesday in the London market. The high prices ruling have been speculative, and this makes merchants chary of disturbing their quotations. Copper is firm, while lead is much better in tone, reflecting the improvement noticed in the English markets since the 1st of the month.

Trade has quieted down as was expected, but a good aggregate volume of business has been done for the month—in fact better than the usual run of Decembers. A great deal of interest has been taken in the tin and copper markets, owing to the recent advance in figures. Users are undoubtedly prepared to buy much more heavily when the time seems ripe.

The tone generally is very bright, especially for this time of the year, and merchants are anticipating much higher prices before the spring. There is a reluctance to quote too far ahead. In this attitude they are buoyed up by the position in iron and steel. U. S. and Canadian producers are booked up with business months ahead, and are not, therefore, looking for orders.

PIG IRON. — Imported business has naturally quieted down, although a demand for store iron is not anticipated to be long delayed. There is no change in the domestic situation. New business has fallen off, but as the plants have work on hand for several months, this easing is not regretted. Prices are firm, ordinary grades at foundry making, $20.50, and best steel iron, $21.50. In imported iron we quote the following ex-store prices: Summerlee, soft, $20.50; Selected, $21; No. 1, $21.50, Middlesboro, $19.50. There is no marked change in the United States markets. Steel prices are well maintained, but in some quarters iron is weakening. This is only to be expected. Production under specifications on old contracts is as great as ever.

TIN.—There is no change in pig iron, and jobbing prices are quoted at 34c. But for the weakness developed during the middle of the weak, there would probably have been another advance. With the stiffening in the market inquiries have been good, but not much extra business has developed in a speculative way. The legitimate demand is good for this time of the year. The very heavy transactions in the English market caused some surprise, but they have been put down to one of those spasmodic bull movements, which now and then characterise the market. There seems to have been no real reason for the speculation, beyond the belief that the time is ripe to buy tin for a rise.

COPPER.—The local market is firm at 14½, with fair business offering. Conditions are reflecting the increased strength of the primary markets, and there is a healthy tone. Since the first of the month copper has firmed up steadily, not only in New York, but in London. According to statistics, consumption in the States during November decreased, but European stocks increased. So that things are pretty well evened up, although it would be safer to see the stocks in Europe decrease, and those in the States increase. The daily rate of production, however made a new record, and it is estimated that at the November figures copper is being turned out at the rate of 1,480 millions pounds a year. It is about time we had a merger.

Spelter.—As we anticipated last week, spelter has advanced 25c. and we now quote $6.25 per 100 lb. Trade is good, although the large users are out of the market for the time being. The primary markets keep very firm, being well above the £23 mark in London, and the $6 mark in St. Louis. There seems a good healthy tone all the way round.

LEAD.—Lead is unchanged at $3.70 for both imported and domestic. There is fair trade moving. The English market is showing much better strength, and from the 1st of the month has shown higher figures.

SCRAP.—The scrap market is on the quiet side. Cast iron is moving fairly well, but the bad roads are against trade. Tea lead has advanced ¼c, and is now quoted at 2½c. Other lines are unchanged: Heavy copper and wire, 11c; light copper bottoms, 10c; heavy red brass, 10c; heavy yellow brass, 8c; light brass, 6¼c; tea lead, 2½c; heavy lead, 2¾c; scrap zinc, 3c; No. 1 wrought iron $12; machinery cast, $14; malleable, $9; miscellaneous steel, $7.

TORONTO.

December 17.—The local market continues to show briskness in trade, though with the closing of the year orders are of a more conservative volume than was the case a month ago. This condition is not due to any fear of the market sagging, but merely for the purpose of making the year's business show up well by not having an accumulation of stocks. The prospect for 1910 is at present splendid, and the first half of the year at least will show an immense improvement over the corresponding half of 1909.

Prices on the whole are stationary and firm though some grades of pig iron, especially imported iron, have advanced about 50 cents a ton because of the winter freight rates. Tin has gone up another cent; and galvanized sheets, which showed strong a week ago, have declined this week. All the other metals are unchanged.

PIG IRON—There is still considerable business being done in pig iron, and this has tended to keep the market firm. While buying is hardly as heavy as during the past few weeks, because of the closeness of the year's end, still this quiet tone makes the market show no lack of strength. Thus metal men hold firmly at unchanged quotations. Indeed because of winter freight rates some grades of pig iron show advances of 50 cents a ton. Especially is this true of imported grades. Summerlee ranges now between $23 and $24, and Middlesboro No. 3 and Clarence are up to $22. Bessemer, too, is somewhat higher. The other grades remain at last week's quotations. Glengarnock is $23.50; Jarrow and No. 1 Clarence, $21.75; and Canadian foundry, $22. Manufacturing irons show more strength. Band iron, No. 10 gauge, is now at $2.30 base; and iron-finish steel is $2.25. Wire has gone up $1 a ton across the line, with another $1 advance promised in January.

TIN—The advance of last week is added to by another cent this week. The local quotation is now $34.50. Business is quite brisk. The imports of tin into America (Canada and United States) from abroad up to December 1 totaled 37,775 tons, an increase of over 6,000 tons over a like period in 1908.

SHEETS AND PLATES—Galvanized sheets show up much easier this week. The interests which only a week ago decided on an advance—and it must be said the market seemed to warrant an advance—have this week retrenched, and even lowered the prices on Queen's Head and Fleur-de-Lis by about 15 cents. The situation is strong, however, and business keep good.

COPPER—The usual weekly story is to be told this week. The foreign market showed considerable strength and London jumped the price 10 shillings on Monday. It has since then declined, however. New York did not fluctuate to such a great extent, so the sum total is that copper stands to-day just about

where it was a week ago. Toronto is in the same position it was last week with quotations at 14c and 14½c for casting and lake copper. Since the opening of May the world's visible supply of copper has increased 100,000,000 pounds.

SPELTER—This metal is steady and firm with unchanged prices prevailing. Foreign spelter is at $6 and U.S. spelter runs from $8 to $8.50. Sheet zinc is worth $6.75 in 5-cwt. casks, and less quantities are quoted at $7.

LEAD — While locally lead has not changed either in condition or price—the quotations remaining at $3.65 for imported and $3.55 for domestic — the primary markets are showing up firmer. The increase in production is none too great—less than 3 per cent. being the rate of increase during the past three years.

OLD MATERIAL—The coming of snow put a damper on trading in this line to some extent. The amount of business done, however, was fair. Prices continue unchanged. Heavy copper wire is 12c; copper bottoms, 11c; heavy red brass, 10½c; heavy yellow brass, 8½c; light brass, 6½c; tea lead, 2½c; heavy lead, 3c; scrap zinc, 3¾c; No. 1 wrought iron, $11; machinery cast scrap, No. 1, $15 to $16; stove plate, $13; malleable and steel, $8; old rubber, 9c.

HARDWARE MARKETS

MONTREAL.

December 17.—Despite the near approach of Christmas, trade has kept up wonderfully well, and well assorted orders are still coming in for rush delivery. From the nature of the demand it does not seem as though dealers had left off buying until the last minute, but that a goo consumption call has already made inroads on their stocks, and they have to sort up. This is very noticeable in the holiday lines.

Skates and hockey sticks are going out at a very fast clip, and it is surprising where they are all going, especially as the season locally at any rate has been very bad up to now for skating. The country roads, too, have been against buying, so that if conditions had been more seasonable, trade would have been quite a record. Builder's hardware continues to go well, while there is more strength to lumbermen's supplies, the men being now in camp. Despite the open weather, weather strip, sleigh heaters, and snow shovels are in good demand.

Booking continues quiet and little is expected until the new year, when the travelers are on the road again. The various representatives are now on the way back or preparing to return for the usual conventions at headquarters.

BUILDERS' HARDWARE—The continuance of the open season has stimulated the sale of builders' hardware. The building activity going on in and around Montreal, is shown by the fact that one day last week the number of building permits issued broke the record for any December. Lock sets, escutcheons, bolts and butts are selling well. We quote: Lock sets (inside) $4 per doz. and up; lock sets (outside $13.20 and up; common rim locks, $1.10 per doz.; porcelain knobs, $1.10 per doz.; sash cords, 32½c to 33c.

WINTER LINES.—General sorting up orders keep up surprisingly well, and there is a good movement in weather strip, sleigh bells, horse blankets, tools, lanterns, and stable requisites. Enamelware is also moving well. Carpet sweepers, wringers, washing machines, bread mixers, food choppers are prominent. Altogether there is a very good movement all the way round.

CUTLERY AND SILVERWARE. — Carvers in cases, table cutlery, scissors, razors, pickle frames, tea and coffee pots and cut glass lines are still in excellent demand, and it is evident that dealers have already experienced a strong call. Altogther trade in these lines has been above the average.

SPORTING GOODS.—The movement in skates and in lesser degree hockey sticks is the most prominent feature of the sporting goods department. The demand for skates has been unusually heavy. Snowshoes, toboggans and sleds are in good demand, but the open season has not helped these lines.

MINERS' SUPPLIES.—The weather has helped mining operations, and in consequence there has been a steady call for supplies at unchanged prices. We quote: Miners' picks, 16½c a pound; prospectors' hammers, 16½c; pick handles, $1.85 a dozen; drilling hammers, 6c a pound; crowbars, 3½; drill steel, 8c.

BOLTS AND NUTS.—The market is very firm and the demand keeps up well. There must be plenty of construction work going on. Nails are also showing good strength. We quote: Discounts on carriage bolts, ⅝ and smaller, 70; machine bolts, ⅝ and less, 60, 10 and 10; coach screws, 75; stove bolts, 80 and 7½.

WIRE NAILS.—$2.35, cut $2.40.

LUMBERMEN'S SUPPLIES. — The fact that lumbermen are now in camp has stimulated the sale of tools and camp supplies. Prices are firm, and we quote: Cant hooks, $12 a dozen and up; axes, $6.50 a dozen and up, axe handles, $1.15 and up; cross-cut saws (inferior) 25c per foot and up; better grades, 43c per foot and up; axe wedges, 25c a dozen and up.

WIRE.—The demand is quiet, and no improvement is expected until after Christmas. We quote: Barb wire, car lots, mixed, $2.50; small lots, $2.55; plain twist, car lots, $2.80; small, $2.85. Galvanized wire, No. 9, $2.25 in straight and mixed car lots, and $2.30 small lots, f.o.b., Montreal. Coiled spring fencing, $2.30; straight and mixed car lots, and $2.35 small lots. Plain wire, bright, annealed and annealed and oiled, $2.35 base. Staples, bright, $2.60; galvanized, $2.85.

TORONTO.

December 17.—There is a "'tween seasons" air to business this week. Not that the Christmas buying is entirely over, but there seems to be a better call for general and winter lines, no one class of goods usurping all the attention. The whole range of the hardware field is showing marked activity and there is a good feeling exhibited among jobbers.

Skates, sleigh bells, food choppers, sleds, stable fittings, lanterns and like articles are the particular hardware items moving this week; and builders' and shelf hardware of many patterns and various lines are in splendid demand.

Prices hold firm with no reported changes. Wire has advanced another $1 a ton across the line, and is said to be slated for a still further advance of $1 in January. So far this has not affected the Canadian, or rather local situation. A change in the listing of loaded shells is promised for the new year. Not that the prices will be altered one way or the other, but more uniformity will in future be shown on the lists. Both smokeless and black loaded shells will be given list prices and the same discount will affect both grades.

CHRISTMAS GOODS—Holiday present buying has dropped off considerably since last issue, though sufficient goods are still being ordered to make this line keep pretty much to the front. Toys and outdoor articles usually classed with sporting goods are the principal things moving under this head. Brass bird cages and small tool chests are favorites.

WINTER GOODS—Staple shelf and seasonable wares are having a better call this week now that the holiday rush is over. Most orders are somewhat belated, evidently because of the much better retail purchasing going on, actual needs only making the buyers enter the field. Sleigh bells, blankets, lanterns, snow shovels, pitch forks, etc., are the wantable articles and also there is a good existing demand for various shelf hardware articles.

BUILDERS' HARDWARE—The local building permits are keeping pace with that set earlier in the summer, but the hardware trade is better able to supply all needs. Lock sets continue to be the foremost line. Builders' tools, too, are fairly active. Carpenters' adzes are at $14 a doz., and augers and bits range all the way from 30 to 60 p.c. A number of barn door hangers and latches are being sold again, the former at prices running from $4.25 to $11 a doz. pairs, and the latter from $2.25 to $7.50. Door bells

continue to be quoted at 45 and 10. Building papers are firm. Canadian locks and keys are yet 45 and 10 p.c.

HOUSEHOLD GOODS—With the exception of food choppers and some cooking utensils there has been a lessening in demand for household goods this week. After the Christmas holidays, however, this line is expected to return to normal. Lamp goods and oil are selling well.

SPORTING GOODS—The demand keeps up splendidly. Particularly is this true of skates and hockey sticks and supplies. Many of these articles are going out as Christmas presents for boys. This season seems to be a skate year. Stocking up was light last summer, so many jobbers are able to get rid of surplus stocks carried over from last year. There will be a change in the listing of loaded shells in January, the new list making for more uniformity. Toboggans are selling well, as are all kinds of sleds.

HEAVY GOODS — Cut nails are steady, but the demand for cut nails is great. Some anvils have gone to the north prospecting country. They are quoted at 5c a pound. Bolts and nuts are fair in demand, as are screws and rods. Pipe of all kinds is good.

U.S. METAL MARKET.

New York, Dec. 15.—The Iron Age says the advance of $1 in wire nails and other wire products effective December 11, represents a total advance of $5 a ton above the low level of May, but leaves prices still $4 a ton below the level of 1908. Announcement is made by the United States Steel Corporation that the American Sheet & Tin Plate Co. will start at once at Gary, Ind., on the building of a large sheet and tin-plate plant at a cost of $4,500,000. This company is now operating 80 per cent. of its tin-plate capacity. Western railroads are expected to come in the market soon after January 1 with further considerable orders for new cars. Specifications on all finished materials have been very heavy in December to avoid cancellations of low-priced contracts January 1. An advance in merchant pipe is looked for in the near future. Coke is easier, and both for early shipment and delivery in 1910, concessions are made from recent prices. The pig-iron market is very quiet, with slightly lower prices in nearly all districts. A significant development of the week is the decision of members of the Pacific Coast Metal Trades' Association operating fabricating shops to use imported structural steel, because of their failure to secure a differential from the railroads on material shipped from the east. A first order of 20,000 tons has been placed abroad.

U. S. IRON TRADE.

Cleveland, O., December 16.—The Iron Trade Review says: The predominant feature of the iron and steel market continues to be the extreme activity of buyers in taking out their material against contracts. With the mills steadily receiving a volume of specifications that compares very favorably with the record total entered in November, makers are not greatly concerned with the apparent decline in new business, which, however, is following the precedent of other years in the slowing up during the holidays. Moreover, the new tonnage coming out is not inconsiderable, and the prospects for renewed buying early in the near year are reported to be promising.

Leading manufacturers of sheets and tin plate have sold practically their entire outputs for the first half of 1910 and are receiving specifications in December at the heaviest rate for any final month in their history. In semi-finished steel, which may be regarded as a reliable index to strict manufacturing activity, some of the largest makers report their December tonnage is running the largest of the year.

HARDWARE TRADE GOSSIP

Ontario.

The Batty Hardware Co., Norwich, has assigned.

Brandram-Henderson, Montreal, have decided to establish a branch warehouse in Toronto.

The mother of Frank S. Sheppard, Toronto city traveler for Wood, Vallance & Co., died on Tuesday last.

James Anderson, vice-president of Brown, Boggs Co., makers of tinsmiths' tools, etc., at Hamilton, is dead.

The Gurney Foundry Co. has been granted a permit to erect a three-storey warehouse to cost $36,000 on Adelaide Strect close to their Toronto works.

The Collins Mfg. Co., Toronto, have moved into their new factory on Symington Avenue, adjoining the C. P. R. tracks, in the northwestern part of the city.

D. Cinnamon, Lindsay, and J. Walton Peart, St. Mary's, were visitors at the Toronto office of Hardware and Metal on Wednesday. Both report holiday trade as being slow and unsatisfactory up to the present time owing to the mild weather and absence of sleighing. In Lindsay the slowness may be due to the "Winter Fair" which is to be held at Lindsay on Tuesday, December 21, prizes being offered for the best farm produce, animals, etc., brought in that day. Another feature is a big baby show. The fair was a big success a year ago but the merchants are not altogether satisfied with it being held Christmas week.

Negotiations are in progress for the erection of a wire and nail plant at Fort Willian. Prominent Montreal capitalists, including H. S. Holt, president of the Montreal Light, Heat & Power Co., and F. W. Thompson, second vice-president and managing director of the Oglivie Milling Co., are interested. Interviewed on the project, Mr. Holt said that they were progressing as rapidly as possible, but it was impossible to say how soon they would commence the erection of the plant. Mr. Holt further said, "The advantages of a plant at Fort William are threefold. There is cheap fuel, and cheap raw material, for the Soo Cirporation will soon erect a steel rod mill at their plant, which will give us raw material practically at our doors. We will also have cheap water power. No definite plans have yet been drawn up, but we are progressing as fast as possible with neogtiations."

Quebec.

David Curle, employed as a messenger boy in the James Walker Hardware Co., Montreal, has been charged with the theft of about $800 worth of hardware and cutlery from the store.

A. Bremner, A. W. Bremner, J. A. Bremner, George Benoit, and Eliot Knox have been incorporated to engage in the manufacture, importation, and sale in Montreal of cement, drain pipes, etc., under the name of Alex Bremner, Ltd., with a capital of $200,000.

At the annual meeting of the Montreal Metal and Hardware Association, of the Montreal Board of Trade, the following officers were elected. President, W. Starke; vice-president, H. J. Fuller, Treasurer, J. H. Hanson; directors, H. Walter Dorken, C. H. Godfrey, W. J. Hayes, and T. Esmond Peck. T. H. Newman was chosen as the association's nominee for election to the Council of the Board of Trade.

George Hadrill, secretary to the Montreal Board of Trade has returned from attending the Chambers of Commerce of the Empire held in Sydney, Australia.

Lorne E. Webster, of the Nova Scotia Steel and Coal Company, has returned to Montreal from Quebec where he resides during the navigation season.

Joseph Lupini, representing Holzapfels, Newcastle-on-Tyne, Eng., makers of marine paints, is in Canada looking after prospects.

Western Canada.

Wm. Hopkins, hardware merchant, Saskatoon, was re-elected mayor of that city this week.

The tender of the Hick Hardware Co., Lethbridge, for heating No. 2 fire hall at that place, was accepted by the town council. The contract is worth $930.

James A. Gemmill, hardwareman at Tugaske, Sask., is to be married shortly to Miss Maude L. Reynolds, of New Scotland, Ont.

William Garnett, carctaker in J. H. Ashdown's hardware storc, at Winnipeg, was instantly killed while repairing the elevator on Tuesday last.

Maritime Provinces.

A steamer is being loaded with steel at the Dominion Steel Co.'s plant at Sydney to go to Prince Rupert by way of the Horn. A second steamer will take a cargo of rails to the same place before the end of the year.

Catalogues and Booklets

Manufacturers or jobbers sending printed matter for review, should draw attention to the new lines listed; and retailers sending for catalogues or other matter, should write on their regular printed letterhead and mention this paper to make clear that they are in the trade.

White Mountain Refrigerators. — A particularly handsome, 72 page and cover, catalogue has been issued by the Maine Manufacturing Co., Nashau, New Hampshire, outlining the new features introduced in the "White Mountain" series for 1910, as well as giving a complete list of their full line. An important and interesting feature is the 24 page insert in the centre of the book, giving colored views of the company's stone quarry, water-fall and pine forests, from which they draw the materials for their "Stone White" line. The natural stone is quarried and then treated to a special process, making a marble-like interior for their refrigerators. Another interesting section, is that devoted to the company's new "Pure White" series in which the cleanliness of the refrigerator is ensured by a white interior finish baked and re-baked until a china-like surface is secured indifferent to atmospheric or chemical action. Copies of the catalogue can be had by writing the company, and mentioning Hardware and Metal.

IRON ORE DEPOSITS ABOVE OTTAWA.

The iron ores of the valleys of the Ottawa and Gatineau rivers have been the subject of an investigation by Fritz Cirkel, M.E., for the Mines Branch of the Department of Mines, and his report comes at a very opportune time, owing to the development lately assumed by the smelting of iron ores by electricity; for the region in question possesses great watter powers, a part of which could very aptly be applied to the establishment of an iron and steel industry.

After describing in detail various iron ore deposits, Mr. Cirkel concludes that many of these would yield ores which could in all probability be treated in the electric furnace. It is stated in the report that this method of reducing the iron ores can compete with the blast furnace for the production of pig iron when electrical energy can be developed at a low cost.

The report is well illustrated by five plates, fifteen drawings and two maps, and the whole forms a volume of 147 pages, which constitutes a valuable addition to the series of bulletins on the mineral resources of Canada, issued under the direction of Dr. Eugene Haanel, by the Mines Branch of the Department of Mines.

Keep thinking about five and ten cent tables until you get them in your store. Hundreds of hardware dealers have made them a huge success.

FOR QUEBEC SUBSCRIBERS.

C. D. Chown, recently connected with the Montreal office of Hardware and Metal has been appointed permanent traveling subscription representative of the paper in Quebec Province. Mr. Chown, as a former retail hardwareman man, knows the problems which confront the trade, and his past experience will enable him to intelligently discuss

C. D. CHOWN, MONTREAL,
A Former Hardwareman who will Represent this Paper in Quebec Province.

the difficulties merchants meet with every day. It is the intention of Hardware and Metal to have Mr. Chown call upon subscribers in every part of the province, and merchants will confer a favor by co-operating with Mr. Chown, in furnishing him with their ideas on progressive retailing and their views on the treatment of questions which are daily presented to them for solution.

INDOOR SPORTS.

A great deal of attention is now being displayed to indoor sports and the merchant should encourage this because some profitable lines are included amongst them. Exercisers and developers, punch bags, fencing foils single sticks, basket ball, revolvers for indoor shooting, are all good lines. There is a great spread of the athletic fever, and the merchant who encourages it is wise.

Traps should also not be neglected. Furs are commanding a high price, and the prospects are that this will be the most successful trapping season for many years. Trappers are said to be planning extensive operations and the merchant should be prepared with a complete stock. The great point is to be ready for the demand, and not lose a sale to a trapper who is in a hurry, because the lines are not in the store. In other words, specify now.

ANOTHER CANADIAN INDUSTRY.

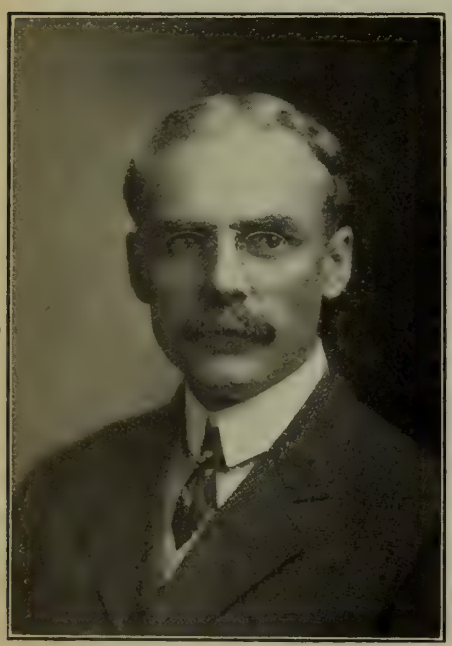
The Northern Aluminum Co., which recently established offices in the Traders Bank building, Toronto, and which has secured large orders for aluminum wire for the Hydro-Electric power system, intends to inaugurate an active campaign to introduce their cooking utensils to the retail hardware trade in Canada. For the present the stock will be imported but a site has, it is understood, been selected for a Canadian factory at either Niagara Falls or Brockville, near their existing plants at Niagara Falls and Massena, New York. The company already has furnaces and a wire plant at Shawinigan Falls, Quebec. The Northern Aluminum Co. has already introduced its kitchenware in Toronto and other cities, and an exhibit of their products will be made at London during the convention of the Ontario Retail Hardware and Stove Dealers' Association next February.

The Northern Aluminum Co. is a branch of the Aluminum Company of America, whose headquarters are at Pittsburgh, and which recently declared a stock dividend of 500 per cent. and gave notice that it would increase its capital from $3,200,000 to $25,000,000. The company is now paying the equivalent of 24 per cent. per annum on its common stock, which sold some months ago as high as $350 per share and in 1907 at $500 per share. The declaration of a stock dividend has been expected for the last three years, but was delayed by the 1907 panic and is part of the general plans of the company to enlarge the scope of its operations. The stock dividend entails the issuance of $16,000,000 additional stock, bringing the outstanding common up to $19,200,000. In 1904 the company had but $1,600,000 common outstanding, but declared a 100 per cent. stock dividend in that year.

The company, through one of its subsidiaries, recently applied to the Canadian government for the privilege of damming the St. Lawrence River below Brockville, so as to create 80,000 horsepower to be used at Massena, where the company has a $5,000,000 investment.

In spite of the expiration in February last of the patents under which aluminum has been made in the United States, the Aluminum Company has not as yet met with any new competition.

The present capacity of the Aluminum Company is understood to be about 20,000,000 lb. per annum, which is nearly 40 per cent. of the world's total production of aluminum. Last year, however, the company did not output more than 8,000,000 lbs., and at the present time is not operating more than half its capacity. Through reductions in price the company expects to popularize the use of aluminum and greatly increase its output.



Some men never do anything on time except quit work.

Martin-Senour Paint Travelers Annual Convention

New Plant to be Erected to Replace Works Established in Montreal Five Years Ago—Convention of Travelers and Dinner to the Staffs of the Various Departments—Optimistic Outlook for the Coming Year's Business.

There was a representative attendance at the annual convention of the traveling staff of the Martin-Senour Co., at the Windsor Hotel, Montreal, a fortnight ago, those present including: W. H. Gerke, manager; B. C. Hazlett, advertising manager, Chicago; J. A. Naud, J. H. Conover, W. T. Fleming, E. J. Cookson, W. Hill, G. Tasse, R. Tasse, W. P. Walsh and A. Moulton.

The convention was opened on Wednesday morning by Mr. Gerke, who spoke of the splendid success of the company during the past year. He made special mention of the enthusiasm displayed by their agents, and of the gratifying success all were obtaining. Mr. Gerke referred to the increases in returns that each month had shown since the ending of their fiscal year on June 30. With regard to the future, he was of opinion that Canada was now on the verge of an era of prosperity which it had never before experienced. The outlook for the company had never looked so bright, and he assured the traveling staff that the high standard of quality of their goods would be maintained regardless of any advance in raw material. The company would not hesitate to advance prices so that the quality should be safeguarded.

Z. E. MARTIN, CHICAGO.

A Canadian who has Won a Wide Reputation as a Paint Manufacturer.

Reports were received from the various territories, all the representatives expressing optimistic views as to business during the coming year.

One afternoon was devoted to a discussion by Mr. Conover and Mr. Naud on the question "How to make a Martin-Senour agent." The main point brought out was the advantages that accrued to each individual merchant by the company's plan of confining their lines solely to one agent in each section thus giving him the sole benefit of all the advertising power of the company. A visit was also made to the permanent exhibition of the company in the Builders' Exchange, Eastern Townships Bank Building.

The Banquet.

"Quality, nothing else but quality." This was the sentiment running through all the speeches which were made at the banquet on Thursday night at the Canadian Club. It was the emblem of the Martin-Senour Co., and the salesmen showed that they meant to uphold it. It was a truly happy gathering. Mr. Gerke presided, supported by Mr. Hazlett and Mr. Naud. The traveling staff and other departments were represented, and a representative of Hardware and Metal was also a guest.

The chairman proposed the toast of 100 per cent. pure and the salesman.

W. Hill, J. H. Conover, A. Moulton, W. P. Walsh, and G. Tasse replied. One and all voiced the advantages they possessed in the high quality standard set by the company. So long as the quality was maintained there was nothing to fear.

The toast of the evening, that of the Martin-Senour Company, was proposed by J. A. Naud, who has been identified with the company since its paints were first introduced upon the market. He gave an interesting review on the development of the business, showing what great strides had been made in a comparatively short space of time. Some 12 years ago Martin-Senour paints were selling only in a jobbing way, now they had only to look at the great number of agents all over the Dominion to see what quality had done for them. He paid a special tribute to the work of Mr. Gerke, who in the first place did not come to Canada to stay. He merely intended to put things in order, and then go back to Chicago. But he found that the field was so promising that he had to stay, and Mr. Naud hoped that he would always be there. Their success was due to the quality of their goods, the thoroughness of the management, and the ability of their salesmen.

Mr. Gerke said that when he came to Canada about 5 years ago to start a factory, he did so with the understanding that he should go back to Chicago again. But when he had grasped the situation, and saw what prospects the company had before them, he made a hurried trip back to Chicago, became a benedict, and spent his honeymoon in organizing their Canadian factory. They could realize what work he had in front of him. The company were under big contracts for spring requirements, and there was little time to spare. He put a night and day gang on, ordering materials, etc., and on February, 7, 1905, he had the first Canadian made tin of "100 per cent. pure" drawn and sent to their president, Mr. Martin, as a souvenir. Mr. Gerke also spoke of the interest taken in the success of the Canadian business by Mr. Martin, who was a Canadian by birth, having been born and raised on a farm near Knowlton, Que. Mr. Gerke spoke of the difficulty in introducing high priced goods in a large city. They had educated the merchant in refusing cheap for higher grade goods. Mr. Gerke also referred to the advance in crude materials increasing the price of paint. It required courage to advance their selling prices, but they were determined to maintain quality at any price. It was the only sensible and logical argument to place before their customers.

W. H. GERKE, MONTREAL,

A Chicago Man who was Favorably Impressed With Canadian Possibilities.

To Build New Plant.

Mr. Gerke then made the announcement that a new factory was to be started in the spring, situated in the north end of the city. That step had been rendered necessary by the development of their business. They were going to spare no money in making it up-to-date. They had bought enough ground for many extensions, from time to time, and he hoped that next year they would be able to hold their convention and dinner under their own roof.

In reply to the toast of the advertising department, Mr. Hazlett said he looked upon advertising as being essential to business. He was greatly helped in his work by the fact that he was backed up by the quality of the goods he was advertising. It rendered his work easier, and it gave him conviction when talking to the consumer.

The toasts of Z. E. Martin, "Our Absent President," and of J. A. Lord, "Our Treasurer," were honored, and telegrams were sent wishing them long life and every prosperity. The office staff, the factory, the shipping department, and the trade press were also toasted.

W. T. Fleming, the company's wholehearted and genial representative in northern Ontario was congratulated as a top-notcher, having brought with him an order for a full car-load of Martin-Senour products from the George Taylor Hardware Co., of Cobalt.

Annual Meetings of Commercial Travelers Assns.

Travelers' Club May be Organized at Montreal — Captain Bernier to be Guest at Travelers' Banquet at Montreal — Elections at Halifax—Annual Meeting at Toronto Next Week.

A TRAVELERS' CLUB.

At the annual meeting of the Dominion Commercial Travelers' Association, held in the Windsor Hotel, Montreal, Saturday evening last, a subject was broached and met with the approval of the members present to such an extent that it was deemed advisable to call a special informal meeting afterward for the discussion of the project—the formation of a social club for travelers. Since the subject was one with which the association as a body can have absolutely nothing to do, it was necessary that it should not be brought up at the meeting of the D. C. T. A., and the after-meeting was the result.

When the club is established—for it was decided to go ahead with the project—members of the club will be able to entertain outside friends, including customers, while they will always have some place to take their local customers when occasion requires. It was clearly explained that the club was to be conducted on strictly business lines, and that it was emphatically not a drinking place, and no misconduct would be tolerated.

It was pointed out clearly by the promotors of the idea that the Travelers' Club was to be absolutely independent of the Dominion Commercial Travelers' Association, and that the two were to have nothing in common. Membership is to be open only to travelers over twenty-five years of age, who are earning sufficient money to insure their moral responsibility. Merchants will probably be given the opportunity of becoming associate members.

A committee was formed composed of the following gentlemen: J. Bevans Giles, chairman; F. N. Picard, Major J. T. McBride, D. M. Lefebvre, Hackett, Austen, W. J. Egan, Samuel Woods and H. B. Levine. These gentlemen will consider the whole question.

Some thirty-five travelers present handed in their names as members of such a club. The fee will be about $25 a year.

On every plate, at the annual dinner of the Dominion Commercial Travelers' Association, a card will be placed, outlining the club proposition, and requesting those in favor of the idea to express themselves, and to attend a meeting, which will be called in the holidays to arrange for the securing of a charter, and the drawing up of the constitution of the new club.

President S. J. Mathewson was in the chair, supported by vice-president Giles and treasurer Max. Murdock. Mr. Mathewson spoke of the courteous action of the Federal Government in changing Thanksgiving Day from a Thursday to a Monday, and Mr. Murdock read a resolution of thanks, to be sent to the Government, which was passed unanimously.

MARITIME TRAVELERS' ELECTIONS.

The annual meeting of the Maritime Commercial Travelers' Association was held in the Board of Trade rooms on Wednesday evening, December 8. The report of the president and directors show the association to be in a flourishing condition. The membership now totals 926, against 869 for 1908. The resources of the association for the past year have increased nearly $10,000.

The annual banquet of the association will this year be abandoned in favor of a "Smoker," which will be held at the Halifax Hotel on December 30. The officers for 1910 were elected as follows:

President.—Charles Blackie.

Vice-Presidents for Nova Scotia.—A. Milne Fraser, D. Rutherford, P. T. Strong, William Tapp.

Vice-Presidents for New Brunswick.—R. F. Humphrey, A. E. Massie, H. V. Vaughan, J. E. Petrie.

Directors.—H. E. Pyke, R. A. March, F. H. Keating, J. B. Douglas, L. L. Libby, J. McL. Fraser.

Treasurer.—O. E. Smith.

The new president represents Clayton & Sons, wholesale clothiers, Halifax, and has been on the road 25 years in the interetss of that firm.

ARCTIC TRAVELER AS GUEST.

Capt. J. E. Bernier has accepted an invitation to attend the annual banquet of the Dominion Commercial Travelers' Association in Montreal, on Monday next. Other speakers include Sir Frederick Borden, R. L. Borden, Henri Bourassa, F. Robertson, Hon. Frank Oliver, and W. Cauldwell.

TORONTO TRAVELERS' MEETING.

The executive of the Commercial Travelers' Association of Canada met in the Toronto offices on December 11 and approved of the draft of the annual report, which is this week being distributed among the members in anticipation of the annual meeting, which will be held on Thursday, December 23.

The voting for next year's officers will close on Monday, December 20, at noon, when all ballots must be in, and the declaration of the poll will be announced at the general meeting.

It is unlikely that a banquet will be held this year. At least no date has yet been set by the executive. The feeling seems to prevail that the week between Christmas and New Year's, when this annual event usually takes place, is not a popular one for this function as the traveling men prefer to give all their spare time at this season to their families. If this opinion is general it may be that the banquet will be postponed until about February 1 if not indefinitely.

TRAVELERS' BENEFIT ASSOCIATION.

It was announced at the annual meeting of the Dominion Commercial Travelers' Mutual Benefit Association, held last week in Montreal, that there had been 18 deaths during the year. There was a surplus of $12,634 for the assessment account and $739 for the working expense account. J. H. Ferns was elected president of the Board of Trustees, and E. D. Marcean, vice-president, and Chas. Gurd, treasurer.

DRUMMERS' SNACK DINNER.

The annual dinner of the Drummers' Snack Club will be held at the Arlington Hotel, corner King and John Streets, Toronto, on Thursday, Dec. 23, at 7 o'clock.

DOUBLE SPIRAL SCREW.

A new double pointed screw which has some novel features is now being introduced by the Anchor Screw Co., Toronto. The spiral running round the body of the screw is a double one right down to the point, or rather to the double point. This enables the screw to enter wood quite easily and quickly. The tests made with this screw have so far proven satisfactory on these two points and have also shown that the screw has a holding power of great strength. The screw is made of high grade steel.

Trade News from the Atlantic to the Pacific

Galt Hardwareman Fined For Selling Air-gun to Small Boy—Paris Merchants Form Collection Agency—Calgary Gets New Industry—Trade Conditions in Various Parts of the Dominion.

HALIFAX.

December 13.—The Christmas trade in hardware lines is starting in fairly brisk, and the outlook for a good season's business is very bright. While the volume of business is large the sales are principally confined to small lines and therefore the returns are not very great.

All the dealers now have their windows decorated for Christmas, and while no elaborate displays are made, the windows are very tastefully and attractively trimmed. Some of the stores handle lines other than hardware, and these are being put to the front.

The prices of all metals are very firm, and the tendency is to go still higher. There is a good demand for nails, wire being quoted at $2.45 and cut at $2.60. The sales of bar iron and sheet iron are good, and there is an active demand for horseshoes. Boiled oil is quoted at 76 cents in barrel lots, and raw at 73 cents in barrel lots, and 78 cents in smaller quantities.

The Newfoundland Smelting Co., with a capital of $100,000, has just been registered at St. John's. The intention of the company is to erect a smelter at York Harbor, Bay of Islands, with a capacity of about one hundred tons a day. The company will get their supply of ore from the York Harbor property, having already one year's supply ahead of them. They also hope to get a quantity of ore from outside concerns, and anticipate that with it will give a boom to the copper mining industries in Newfoundland. The company wll export the copper to Swansea and New York. J. H.

MONTREAL.

Dec. 14.—The permanent exhibition in connection with the Montreal Builders' Exchange, Eastern Townships Bank, was opened last week. The hall was nicely decorated, and the various stands, occupied with displays from different firms catering to the building trade, presented a very pleasing and businesslike appearance. The hall covers about 4,000 square feet, and is thus large enough to show off exhibits well. This is the first effort which has been made to establish such an exchange in Canada. It is intended that the exhibition shall remain open to the public at all times during business hours, in order that owners as well as architects and contractors may have a better opportunity of making selections of any supplies of which they may be in need. Some 300 guests visited the exhibition during the evening, and supper was served, and musical selections rendered.

J. M. Arcand, president of the Exchange, formerally opened the hall. He felt sure that the exhibition would be just what the building trade required. It would be easy for them to inspect the different products when displayed in the Hall. He was very pleased to see so many present.

Among the firms who have taken are Thomas Robertson & Co, Dominion Radiator Co., Taylor-Forbes, Warden, King & Co, Martin-Senour Co., Dougall Varnish Co., Robt. Mitchell Co., Jas. Robertson, U. S. Steel Products Export Co., and John Lysaght (A. C. Leslie & Co).

KINGSTON.

December 14.—Frederick Simmons, of Simmons Bros., hardware merchants, is working on a contract for plumbing and tinsmithing in connection with the new assembly hall at the Brockville asylum.

A fact which goes to show that there has been a big demand for cement, is that nearly all the big grain vessels coming into this port during this season, were chartered on their trip back to Ft. William, to load cement at Belleville. An enormous amount of cement was taken out of Belleville, and the vessels plying between Ft. William and Kingston, found it very convenient to stop at Belleville and take on a cargo, thus making both ends of the trip profitable. E. G. B.

BRANTFORD.

December 14.—Local hardware dealers report that last week's seasonable weather had a most bracing effect upon winter goods, especially such lines as are connected with sports. "If we only have another week of it, we would run up sales to equal or excel last year's," said a Colborne Street hardware dealer, on Monday, "but if it continues like today, drizzly and wet, our sales will be materially decreased. We look forward to a splendid sporting goods season, however." In answer to a query as to how the fall stove trade had been, he answered. "The best stove season we have ever had, in all lines, coal, wood and gas heaters and cookers being in good demand. The local factories have been working full time all year, and the result is that our cash trade is very good, many of our credit customers preferring to pay cash down, and secure lower prices, as on stoves we allow a discount of from $3 to $5 for cash." The manager of an electric supply store said that the demand for electric novelties was very good, an electric toaster, which has just been put on the market, is having a good sale. This is displayed in their main window with two pieces of toast in the rack, drawing considerable attention.

The local merchants and newspapers are now working the slogan, "shop early, and shop in the morning," almost every large advertisement containing this watchword. This is being done in order that every customer may receive good attention, as most of them delay until the afternoon or evening, when, consequently, there is a big rush. The local hardware dealers will remain open every evening from now until Christmas.

The Dominion Natural Gas Co. struck two gas wells at Woodhouse, near this city, last week. The Oxford Oil & Gas Co., of this city, which has been operating in Oxford County, near Woodstock, has struck a heavy flow of gas, and as this is the second big flow struck, it appears a certainty that Woodstock will be using natural gas and fuel within a few months.

A meeting of the merchants of the Town of Paris was held on Thursday evening last for the purpose of discussing mutual trade protection. Secretary Willetts of the Brantford Merchants' Protective Association was present, and addressed the gathering.

It was decided to organize the Paris Merchants' Protective Association. Chas. McCausland was appointed president; C. H. Burns, secretary; J. A. McTavish, Thomas Dunn, J. W. Hilborn, Arthur Sayles and John Knill executive committee pro. tem. An active organization is the aim of the new association.

Secretary Willetts of the Brantford Merchants' Protective Association reports that he has collected over $2,000 of "bad debts" in the few months that the association has been organized.

A Galt hardwareman was on Friday fined $3.50 for selling an air gun to a 11-year-old boy. In this neighborhood the law against selling to boys is strictly enforced. A. W.

WINNIPEG.

Dec. 14.—Local hardware stores are at present anything but attractive, due to the preliminary process of decoration. Next week we hope to note some extremely picturesque interiors and windows. Several retailers are making a strenuous effort to outclass any previous attempt at window displays.

R. Wyatt has almost completed the interior decoration, and the cris-cross design of highly colored ribbons of paper that run from wall to wall, shows some artistic ability on the part of William Brown, who did the work.

McDonald & Fleming have had a fine display of razor strops done up in beautiful Xmas boxes in the window for several days. The display, however, is to be superceded shortly by a more elaborate window. It is noted that the class of goods this year is of a higher order and the quantity of gift goods is much larger. This fact makes it evident that the display everywhere in the store will be better than in previous years.

Condensed or "Want" Advertisements

Those who wish to sell or buy businesses or stocks, obtain competent help, connect with satisfactory positions or secure aid in starting new enterprises should not fail to use the Want Ad. Advertisement page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere who is looking for just such a proposition as you have to offer.

AGENCIES WANTED

GOOD line of hardware wanted on commission for city and country. To commence January 1st. Apply Box 925, HARDWARE AND METAL, Toronto. (49)

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

ENGLISH firm manufacturing full line of paints, dry colors, varnishes, etc., desire to secure Canadian agent who has good connection with the Canadian hardware trade. Having direct steamer connection with Montreal, long experience in manufacturing, up-to-date plant and equipment and large output, we believe good live Canadian agent could build up good business for us. We would be willing to advertise the line in Hardware and Metal. Apply, giving agencies held at present, to Box 917, HARDWARE AND METAL, Toronto. (50)

MANUFACTURERS' AGENT with good connection with hardware trade wanted to take hold of first class line of ice cream freezers. State lines already carrying. Box 922, HARDWARE AND METAL, Toronto. (50)

PROBABLY the most talked about machine in Canada is the Hainer Book-keeping Machine. It combines in one machine the cash and credit register, time recorder and account register. Representatives wanted everywhere. Write for our proposition. Book keeping Machines, Limited, 424 Spadina Ave., Toronto. (tf)

TILES—Wanted resident agents to sell glazed tiles, floor tiles, etc., in Winnipeg, Montreal, Quebec, Toronto, Halifax, Vancouver. Apply "Tiles," HARDWARE AND METAL, 88 Fleet Street, London, England. (51)

U. S. MANUFACTURER of hammocks wants to secure good live Canadian agent. State agencies already carried and facilities for covering hardware trade. Box 923, HARDWARE AND METAL, Toronto. (50)

ARTICLES FOR SALE.

Don't keep any fixtures or tools around your store for which you have no further use. They are worth more to-day than they will a year hence. Don't keep money tied up which you could use to secure discounts from your wholesaler.

SET OF TINNER'S TOOLS FOR SALE—In use only six months. Latest design. A bargain. C. J. Werner, Mitchell, Ont. (51)

BUSINESSES FOR SALE.

Somewhere in Canada is a man who is looking for just such a proposition as you have to offer. Our "For Sale" department brings together buyer and seller, and enables them to do business although they may be thousands of miles apart.

FOR SALE—Stove, tinsmith and plumbing business in good Western Ontario village. Water works just going in. Price $2,500. Apply Box 924, HARDWARE AND METAL, Toronto. (tf49)

FOR SALE—Hardware, tin and plumbing business in Western Ontario. Stock $5,000. Turnover $18 000. Fine opportunity to the right party. Box 918, HARDWARE AND METAL, Toronto. (50)

WANTED—Clerk with four or five years' experience, able to speak French and English fluently. One with window dressing experience preferred. Apply Hockens & Siddons Hardware Co., P.O. Box 1057, Moose Jaw, Sask., with references and salary expected. (1)

Some difficulty has been experienced by retailers in keeping the window glass free of frost. During the severe cold blast of last week several prominent hardware windows were coated heavily with ice from top to bottom. W. A. Templeton is constructing a device whereby warm air is brought direct from the furnace and issues through the floor of the window seat a few inches from the glass. This keeps the glass from freezing over.

The Rocker ash sifter is being handled very extensively by the department stores of the city and it is to be regretted that more of the retail hardware merchants do not handle them. They are an article that every household requires and that every hardware merchant could sell if he made an effort to do so.

J. J. Foote, manager of the McClary Mfg. Co., left the city last week on a few days, tour of the west. While absent he will visit the newly established branch at Saskatoon.

The employes of the wholesale hardware houses are preparing to organize a curling league for the coming season. The Moulden trophy will again be competed for and if the enthusiasm prevails no doubt a very interesting series of games will be played this winter.

F. M. Morse, of the Miller-Morse hardware Co., returned last week from a three months' trip abroad.

L. C. H.

CALGARY.

December 9.—President C. O. Bassett, of the Patent Holding & Manufacturing Co., of Spokane, Wash., arrived in the city and closed a deal Thursday, for a block of ground in the east end near the Calgary brewery. The factory buildings will be erected in the spring of the coming year. The site embraces a little over an acre of ground, and the price was $5,000. The company will erect a 40 x 80 factory, and will expend about $10,000 in building and machinery this spring.

A large land deal has just been put through in Southern Alberta, when T. Ellis and P. J. Russell, representing the Vancouver, Prince Albert Meat Co., purchased the large ranch of P. Muirhead situated 10 miles west.

VICTORIA.

December 9.—Trade for the first part of the month has been very good. A spell of very cold weather had the effect of bringing in a good number of stove orders; also, those hardware dealers who carry a stock of skates did a lively trade for a few days, supplying the wants of skaters.

This is the earliest skating we have had on the coast for some years.

Holiday trade is starting to come along very nicely. A vigorous "shop early" campaign having, apparently, some effect in inducing the public to make early purchases and not leave all to the last week.

The B. C. Hardware Co. have a unique window display this week. An automobile has been constructed from general hardware stock. The body of the machine is made of fire screens, as is the top cover. Seats and front are roasting pans, while the wheels are made of stove pipe elbows, with stove pipe for axles. All the little etceteras that go to make an auto complete are put on. It looks a good deal like the real thing—at a distance.

The Westholme Lumber Co. are to construct a three-storey building on Government Street. Work will commence at once.

Tenders will be called for the new Y. M. C. A. building in January.

The Provincial Government has let the contract for the new Lampson Street school to Thos. Ashe, for $14,854. The building will be heated with the Rutley tubular furnace system.

The school trustees have decided to ask for $10,000 for a new school for the east end of the city, to be built on land recently purchased for this purpose.

A Vancouver syndicate, Auld, Gwynn & McLarty, representing the Northern Oil Co., are looking for a site for an oil refinery near Esquimalt.

W. B. C.

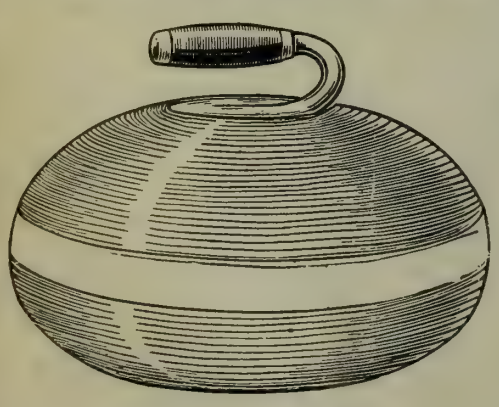
NEW WESTMINSTER.

December 11.—Mr. Goldsmith, of Edmonton, Alta., who has discovered a new method of manufacturing powder, making it less dangerous, is seeking a site for a works in this neighborhood. At the meeting of the Board of Trade in this city, W. R. Gilley, A. E. White and the secretary were appointed a committee to ascertain particulars regarding an island in the Fraser river, which is suitable for site purposes, and see if an agreement could be made with Mr. Goldsmith. The powder in question is simple in manufacture and will not explode unless confined.

R. B.

1910 CALENDARS.

W. F. Macpherson, Prescott, Ont., has supplied the customers of his retail store with a well chosen calendar, 16 x 20 inches, showing a handsome woman inhaling the fragrance from an Easter lily.



The B. Greening Wire Co., Hamilton, have for fifteen years been issuing an annual calendar to their customers, and this year have a new design, showing their immense plant at Hamilton, together with pictures of Nathaniel Greening, who established the business at Warrington, England, in 1799, Benjamin Greening, who began the industry at Hamilton in 1859, and S. O. Greening, the present head of the company.

Lewis Bros., Montreal, have mailed to buyers of their Black Diamond axes, a neat paper weight in the shape of a Black Diamond axe head, which wants but the handle to make the actual tool. It is neatly boxed, and makes a very useful present.

St. Marys Hardware, Limited, St. Marys, have issued the first of a series of monthly calendars, the one for January being entitled "A Winter Girl." It is accompanied by seasonable printed matter supplied by manufacturers advertising carpet sweepers, sad irons, and tungsten lamps.

CHANGE IN MANAGEMENT.

George Gillies has disposed of his interests in the Toronto Bolt & Forging Co., and T. H. Watson for many years the vice-president and managing-director, has been elected to the presidency of that company, also assuming the active management of their various plants.

Western Canada Hardware Market Situation

Our Western Correspondent Reviews the Market Outlook — Hardware Quotations Corrected by Telegraph From Hardware and Metal's Winnipeg Office up to Noon on Friday.

Winnipeg, Dec. 17. — The repeated orders for holiday goods and specialties are so large that the past month's business is considered a record one. A traveler who arrived in the city a few days ago, after spending several months in Saskatchewan, stated that retailers were not stocking as heavily as they were accustomed to doing a few years ago. The present transportaton facilities from Winnipeg to points west, are so good that merchants find they can order light and more often. The fact that there are several wholesale houses opening in various places in the west has also tended to bring about this result. Ths condition marks a new era in the business life of the west. Heretofore merchants ordered all stocks once or twice a year whereas now they order from the nearest wholesale house, whenever they want an article. It is not surprising then, that at this point in the wholesaler's career he finds the trade more active than usual. And with "the old order changing giving place to new," the future looks bright.

All lines are moving well in winter goods. Stoves, heaters, weather strip and lanterns, are having a good sale. Lumbermen's supplies are in demand and in some quarters there is a shortage of axe handles. Cutlery of all kinds is in special demand, as well as all grades of plated ware. Collections are fair, and old standing accounts are being cleared off.

Winnipeg Quotations.

Wire—Barbed wire, 100 lbs., $3.15; plain twist, $3.40; staples, $2.90; annealed wire, $2.85 base; oiled, 10c extra; bright iron, $3.15 base; brass spring wire, 29c base, plain galvanized wire, 6, 7 and 8, $3.50; No. 9, $3.10; No. 10, $3.60; No. 11, $3.70; No. 12, $3.30; No. 13, $3.40; No. 14, $4.25; No. 15, $4.75; No. 16, $5.

A FORTUNATE HARDWAREMAN.

J. E. Trelford, who for 18 years prior to March, 1908, conducted a hardware business at Markdale, Ont., is spending the winter in Toronto. After selling out his business in Markdale he went west, settling in Saskatchewan. Fortune has smiled upon him since he went west and he is now the owner of many broad acres and town lots. He cultivated some land himself in the capacity of what might be termed a gentleman farmer. His principal vocation, however, has been the buying and selling of land and he is already an enthusiastic westerner. He gives some glowing results of the success which has attended the efforts of many farmers in the west, mentioning one, for example, who this year cleaned up $15,000 out of 900 acres of land. This was his first effort. He speaks of another farmer in Alberta who cleaned up $48 an acre, net, from fall wheat, the yield being 60 bushels an acre. Enthusiastic as he is about the west, he is still enthusiastic over Hardware and Metal. "I took Hardware and Metal" said he, "from the first time it was published."

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal waterworks and sewerage systems, railway or mining news, etc.

Industrial Activity.

The Brandon Shoe Co. will erect a $7,500 factory at Brantford.

The San Francisco Stone Co., is considering a proposition of starting a plant at Calgary.

The Ontario Engine & Pump Co. have decided to locate at Calgary and will buy a big block next spring.

Excavations are in progress for the erection of an eight-storey office building and warehouse at Montreal, for Beardmore & Co., leather manufacturers, Toronto.

Mr. Sterett, of the Independent Asphalt Co., Seattle, is looking into the possibilities for locating a branch plant at Vancouver, to cost in the neighborhood of $40,000.

A communication received from Mr. Tennant, financial man for the syndicate which proposes to establish large wire nail and rolling mill plants at Fort William, indicates that the plants are to be established in the immediate future.

The People's Ice Co., financed by well-known business men of Toronto, with the assistance of practical ice manufacturers, have decided to erect a plant at that place to produce "Absopure" ice, under rigid sanitary conditions.

Mount Forest ratepayers will, on Jan. 3, vote on a by-law to aid the enlargement of Leslie Brothers' planing mill and factory, in that town, by granting them free water for the use of the factory, and a limited assessment and taxes.

R. E. Cushman, of the Canadian Lead Mining & Smelting Co., stated that the company had $170,000 to invest in a plant at Kingston. At first from 35 to 50 men would be employed, and the number would increase as the industry developed.

Mr. Goldsmith, of Edmonton, Alta., who has discovered a new method of manufacturing powder rendering it less dangerous, is desirous of securing a site somewhere near New Westminster, on the Fraser river, for the manufacture of powder.

President C. O. Bassett, of the Patent Holding and Mfg. Co., Spokane, Wash., has closed a deal for a block of ground in the east end of Calgary, and factory buildings will be erected early in the spring of the coming year. The company will expend about $10,000 in buildings and machinery.

The Western Drydock & Shipbuilding Co. have filed plans and specifications of the proposed buildings to be erected on their site at Bare Point, Port Arthur. The buildings include a warehouse, blacksmith shop, foundry, pattern shop and storage, office, power house, machine shop, boiler shop and joiner shop.

The Cockshutt Plow Co. is commencing extensions on their plant at Brantford, which, it is said, may result in an outlay of $100,000, next spring. It is also stated Frost & Wood concern may go to Brantford, owing to recent selling arrangements entered into with the firm by the Cocvkshutt Co., which may result in a merger.

W. E. Redway, Toronto, submitted a proposition looking to the establishment of a shipbuilding industry at Belleville. He wants a free site, $10,000 worth of dredging done by the city, a loan of $25,000 without interest, to be repaid at the rate of $1,000 a year, and exemption from taxes other than school taxes. In return he proposes to build a plant valued at $30,000.

The Canadian Bond Hanger & Coupling Co., a Canadian branch of the Bond Co., operating in Manheim, Pa., and capitalized at $75,000, will start operations in February at Alexandria. The directors are: President, Charles Bond, Philadelphia; vice-president, John McIntosh, Alexandria; directors, Hugh Munro, Alexandria; Martin G. Hess, and M. T. Williams, of Manheim, Pa.

Two new industries will commence operations in Berlin during the next few weeks. The Berlin Fuel Savers Co. have leased part of the old market building and will make the new fuel saver and heat generator, which has been patented; and Wm. J. and Fred Witte have returned from Newark, N.J., and have leased a flat, where they will manufacture high-grade buttons.

It is expected that with the coming of spring the manufacture of turpentine and tar will be carried on extensively by Joseph Feinbrook, at his factory, near Doaktown. $65 000 is being invested this winter, and by spring 20 stills will be in operation. It is expected that starting about next May 200 men will be employed and besides the turpentine and tar it has been decided to manufacture wood alcohol and creosote.

A large American firm, so it is reported, has acquired almost all the leading lumber and pulp properties between Quebec and Murray Bay, and is forming them into one large corporation. Rumor says that over a million dollars have been invested by Americans in lumber properties on the north shore. It is also said that a large foreign company has acquired the iron mines of the Bay St. Paul district, and that vast sums of money will be spent for their development.

Port Arthur's industrial committee has closed an agreement with the Canadian Linen & Paper Co., represented by E. P. Bender, Winnipeg; Dr. Phar. Winnipeg; H. F. Forest, Winnipeg, and Prof. Meygret, France, to locate a manufactory there for the making of linen and paper from flax. The company gets 50 acres site free, but no bonus, except tax elimination. It will start May 1, 1910, on the erection of a $50,000 plant, and will spend $250,000, in five years, and employ at least 150 men. The company will use an entirely new and secret process, making linen at a greatly reduced cost. One of the principal reasons in coming here is to get water and air free from alkali.

Municipal Undertakings.

Barton Township council will supply a water system to residents on Hamilton mountain.

Work on the construction of a sewage disposal plant at the foot of Omemee Street, St. Thomas, has been commenced.

J. H. and Hugh Murphy, of Buckingham, Que., have waterworks construction contracts at Weyburn, Sask., worth $50,000.

Supt. Hewitt, of Kingston's waterworks department, states that it is necessary to renew the service pipes on King Street, that city, at a cost of $3,500.

The Toronto Board of Control has awarded the Canada Foundry Co. the contract for 2,000 lengths of 12-inch cast iron pipe, at $16.75 per length, or $33,500 in all.

In order to keep pace with the requirements of the city, another loan to enable the Victoria council to proceed with the extension of the sewerage system will have to be arranged for at a very early date.

It is proposed to lay at Toronto, water mains on Conduit Street, near Western Ave., 370 feet, at a cost of $441.78; Minto Street, 280 feet, at $285; Pacific Ave., 150 feet, at $155; and Quebec Ave., 375 feet, at $443.70.

New water mains are contemplated for a number of Toronto's eastern streets, as soon as they are brought into the city. These include Waverley, Chester, Whitney, Woodbine, Balsam, Coxwell, Ashland, Lincoln, Ashdale and Redwood.

Reinforced concrete pipe to carry the sewage effluent from the sewage disposal works across Ashbridge's Bay at Toronto, wil be purchased from E. W. Hyde, Jr., for the sum of $18,855, and the Canada Foundry Co. will receive $41,000 for supplying riveted steel pipe to continue the work into the lake.

Public Buildings.

A public hospital will be built at Oshawa.

The new Toronto technical school will cost $650,000.

The C. P. R. propose to build a $3,000 station at Eganville.

Alterations costing $60,000 will be made to Ottawa's city hall.

St. Bartholomew's Anglican congregation, Toronto, propose erecting a new $25,000 edifice.

The Railway Commission has ordered a union station to be built at Regina by the C.P.R., C.N.R. and G.T.P.

A new Catholic school to cost $25,000, will be erected at Fredericton. Contracts will be let early in January.

IVER JOHNSON
SAFETY AUTOMATIC REVOLVERS

OUR CLAIM of *Absolute Safety* made good—we have never learned of a single accidental discharge.

This means that you can't harm yourself or others by striking an Iver Johnson hammer on the drawer of desk or bureau, catching the trigger on your pocket, accidentally dropping it or striking it. Prove it—

Hammer the Hammer

Make any test you please. There can be but one result. You will be convinced of its absolute safety. The revolver *can't* go off until you pull the trigger.

Makes Good on Claims and Makes Good Profits

The advertising of Iver Johnson Revolvers covers the whole field—big magazines and sporting publications. All inquiries are referred to the dealer—never handled by mail where the dealer will supply.

Iver Johnson Revolvers are not premium goods—never sold to "catalogue houses"—distributed through the trade only.

Send for Dealer's Catalogue and give your Jobber an Order.

LONDON ROLLING MILL CO., LTD.
LONDON, CAN.

Work on the Lacombe Home at Saskatoon, will be recommenced in April next. The building will cost $75,000.

The Canadian Northern Railway will proceed at once with the erection of a temporary station office and freight shed at Ottawa, to cost about $5,000.

Plans are under way for a new Methodist Theological College, which is to be erected at Strathcona, in connection with Alberta College, at a cost of $100,000.

The work of reconstructing the old post office building at Montreal, will be commenced as soon as the Christmas rush of mail is over. The sum of $80,000 will be expended.

The University of Saskatchewan governors have accepted the plans of the new buildings proposed to be erected, and have decided to proceed with the building of three of them.

The New Chemistry Building given to the Kingston School of Mining by the Ontario Government, will be erected by Michael Sullivan, whose tender of $60,000, was the lowest. Work will be started at once.

The St. Catharines city council has decided to submit a by-law to the ratepayers at the January election to authorize a grant of $15,000 to the trustees of the General and Marine Hospital, towards the erection of a new $75,000 hospital.

Plans for a new wing to the Toronto Isolation Hospital have been forwarded to the Board of Control by Medical Health Officer Sheard. They provide for an addition three storeys high, with separate wards for scarlet fever and measles. The estimated cost is $80,000, and may run as high as $120,000.

General Building.

A. Viens is to erect a three-storey building at Montreal, at a cost of $10,000, to house 12 families.

Having sold their present premises the Y.M.C. will next summer begin the erection of a new building at Montreal.

The church home at Montreal, has been granted a permit for a new $12,000 building. G. W. T. Nicholson, is the contractor.

Joseph Sayward will erect a six-storey building at Victoria, the ground floor of which will be used for stores and the rest for office purposes.

The plans for the addition to the premises occupied by Kelly, Douglass & Co., at Vancouver, are now completed. The new building, will cost $80,000.

Building permits recently issued at Hamilton are as follows:—D. Kelly, two houses, $2,400; John Poag, house $12,500; H. J. Bush, house, $2,000.

A permit was issued at Montreal to Jas. H. Maher for a new apartment house to accommodate 26 families, and to cost in the neighborhood of $18,000.

F. Wilson, of Lassen, Alta., has had elaborate plans prepared at Calgary for a large hotel, which he intends to erect at the new Grand Trunk Pacific town of Lassen.

The following building permits were issued at Quebec recently:—Fred. Hunt, dwellings (four), $4,000; Bryson, Graham & Co., warehouse, $12,000; T. J. Somerville, dwelling, $2,000.

The C.P.R. are said to me contemplating the building of a large modern downtown hotel on the old St. Lawrence Hall site, at Montreal, which was purchased by the company three years ago.

The following building permits were recently issued in the Oak Bay, B.C., municipality:—R. R. Jones, a two-storey house, to cost $4,500; J. S. Floyd, a two-storey house, $5,000; Dr. H. Rundle Nelson, a two-storey, house, $6,000.

A. Rivet, Montreal, has been granted two permits for houses, at that city. One block will comprise six houses to contain 18 families, and is to cost $15,000. Almost adjoining a $9,000 building will be put up to accommodate 12 families.

The following are recent permits granted at Toronto:—W. N. McEachren, two pairs dwellings, $10,000; C. Garfunkel, four pairs dwellings, $16,000; Imperial Motor Car Co., garage, $25,000; G. T. Somers, dwelling, $13,500; H. Simpson, apartment house, $20,000; R C. Vaughan, dwelling, $15,000.

A. B. Ormsby & Co., at $1,070, have the tinsmithing and metal roofing contract for the new Logan Avenue public school, Toronto. The heating and ventilating contract went to J. R. Seager at $4,850, and heat regulation to the Johnston Temperative Regulating Co., at $775. Reid and Brown will supply structural steel at $2,073.

Railway Development.

The new electric line from Port Hope to Toronto proposes to construct branches to Uxbridge, Peterboro, Lindsay and Lake Ontario from points on its main line.

An English company proposes establishing a trolley system at Moncton, N. B., by purchasing the charter now held by the Moncton Electric Street Railway, Heat and Power Co.

D. D. Mann, of Mackenzie & Mann, is quoted as stating that the grading on the line to Camrose from Strathcona, would be started early next spring and completed by the early autumn.

E. A. Evans, general manager of the Quebec Railway, Light & Power Co., has received instructions to prepare and revise the plans already made in connection with the building of the Quebec and Saguenay Railway, from St. Joachim to Murray Bay. He is now engaged in making arrangements for a final survey in estimates for this work, which, in all probability, will be started next year.

Officials of the Alberta & Great Waterways Railway, which will be the most northerly road in Canada, running 350 miles northeast from Edmonton, are arranging for starting active construction in the spring. The officers here are: W. R. Clarke, of Kansas Cit, president of the United States Trust Company and president of the Alberta Railway, and E. A. James, of Edmonton, general manager of the company. Contracts for the whole 350 miles will be let in January, and these will stipulate that 150 miles should be completed for operation by next fall. The road will terminate at Fort McMurray, 350 miles northeast of Edmonton. At Fort McMurray it will connect with the Peace, Athabaska and Mackenze rivers, which together have 3,500 miles of waterway navigable by steamers, stretching to the Arctic and Pacific oceans. The road will thus connect the Arctic ocean by water and rail with the transcontinental railways at Edmonton.

New Companies.

Acme Vacuum Cleaner Co., Montreal, capital, $20,000; to manufacture vacuum cleaners. Incorporators, W. T. Cumming, A. J. Brown and F. G. Bush, Montreal.

The Jones Hardware Co., Uxbridge; capital, $11,000; to carry on a general hardware business. Incorporators, Laura N. Macnab and Jno. Macnab, Port Perry, and Wm. O'Hara, Uxbridge.

Canada Pipe & Steel Co., Toronto; capital $100,000; to manufacture iron, steel and metals, and make tools, machines and repair and construct structural work. Incorporators, J. L. Ross, A. R. Bickerstaff and A. W. Holmstead, Toronto.

NEW COKE OVENS AT SOO.

The Lake Superior Corporation has placed a contract for the instalation of a system of by-product coke ovens, at the Soo plant. The apparatus will consist of a series of 110 ovens, arranged in two batteries, each of 55 ovens. The type of oven will be the same as is being erected at Gary, Ind. The cost of the plant will be about $1,500,000. The charge of coal for each oven will be about 13 tons, making a total charge for the 110 ovens of over 1,400 tons of coal. The yield of coke per oven will be about 10¾ tons, or nearly 1,200 tons per day. For the generation of industrial power nearly 10,000,000 cubic feet of surplus gas will be available. Indicated by heat units, the quality of this gas represents a heat value of about 200 tons of good coking coal. The distinguishing feature of this system system is the extraction of ammonia direct from the gas in the form of sulphate of ammonia, without the employment of a water scrubbing process. An improvement in the coke quenching arrangement will also be instituted, so that instead of having a coke bench the coke will be pushed into a coke quenching car. It is expected that the plant will be in operation by January, 1911.

The Retail Paint Trade

PREACH QUALITY.

Quality—not price. Does the merchant realise the great difference between the two. Does he realize that while quality will give him lasting friends, price will give him but one-time customers. Price draws but once. Captured by the "bargain" the customer buys, and paints. But the sun and the rain soon play havoc with the surface, the children have hardly played a game upon the verandah before signs of usage appear. Does the customer blame himself for being so foolish as to think that cheap paint could be a bargain? No, he blames the merchant for carrying such a line and enticing him to purchase. The merchant is the spider, and he is the fly.

The merchant therefore gets the odium, and loses any future trade. He makes an enemy instead of friend, and what every dealer wants is friends. Friends make a business; customers who only buy once, and then say "never again," kill a business. Therefore preach quality first and last. It may mean a bigger strain upon the salesmanship of the clerk—for there are a great number of people who do not realize the necessity of quality. The dealer may even have to educate his whole district, but while he is doing this he is making his progress solid, he is making friends, and if cheap paints are being sold in his district he will in time gather in those who have been bitten. Cheap paints sell once, good paints sell always. Do not forget that. Let it sink in hard and fast.

After all there is such a little difference between quality and lack of quality, that is so far as price is concerned. Do you work that point in hard enough to those customers, Mr. Dealer, who say, "So-and-So's paints are cheaper than yours?" How much cheaper! Is the difference enough to bridge over the wide gulf between a paint that will stand usage, and hard usage too, and a paint that will break up at the first breath of summer?

Painting is done for a specific purpose, not for recreation or for finding paint men a job. It is done to preserve the house, to beautify it, to add to its value as a selling proposition. In fact to act as a general insurance. Can cheap paint fulfill those obligations? One might just as well paint with colored water.

Take the question of price again. The cost of labor in painting is generally estimated at about three to four-fifths of the whole price of the job, and whether the customer has "quality" or "price" paint this proportion is always the same. What little difference can a few more dollars make on the whole amount, while the expenditure on good paint carried out over the many years

"the finish that endures"

Floorglaze

Now comes in M. L. Floorglaze Lacs and Transparent, as well as M.L. Floorglaze Enamel Colors—giving fine hardwood finishes: Oak, Mahogany, Walnut, Natural, etc. Great for interior decoration.

Get sample tins and color cards of the now-complete M. L. Floorglaze line. We can make it a money-raiser for you in your town. Stocks in Toronto (6 Morse Street); Winnipeg (108 Princess Street), and Vancouver (550 Beatty St.)

That addition makes the M. L. Floorglaze line just about as complete as any ever offered you. With a stock of M. L. Floorglaze Lacs (10 shades) and M. L. Floorglaze Solid Colors (17 of these) you can take care of every paint requirement under the sun—and do it with more satisfaction to your customers—and with added profit to yourself, for your paint stock needn't be half as heavy as it may be now.

that quality will last, is but a very small proportion of the outlay on cheap paint, which will not last at all.

There never was a truer expression than the one that the most expensive luxury we can enjoy is—cheap goods, and the most inexpensive—fair priced goods.

Do not be afraid, Mr. Dealer, to preach quality rather than price. And to stand by it. Your customers will thank you in the end.

PAINT AND OIL MARKETS

MONTREAL.

December 17.—A good flow of fair size orders is reported despite the fact that trade is always inclined to be sluggish at this time of the year. In fact, business for December is exceeding all expectations, and this is put down to the general confidence in the trend of trade next year, and the hardening of prices encouraging buying in a speculative way.

Linseed oil is at present mostly in the limelight, and an advance of two cents is reported. High prices are being paid for seed, and but for the steadiness of the English markets quotations would probably be much higher.

As we have anticipated in these columns, the high price of raw materials has had its effect upon the ready mixed paint market and manufacturers have either withdrawn prices or are contemplating doing so.

TURPENTINE—At this time of the year turpentine usually shows a great deal of life and quotations are frequently enhanced. However, this month seems to be an exception, and prices are steady and unchanged under a fair demand. We quote, 78c to 80c single barrels.

LINSEED OIL—The market seems to be in rather an uncertain state owing to the continued high price being paid for seed. Local quotations have gone up 2 cents. The English market, which practically controls the linseed oil markets of the world, has kept figures back up to now. Montreal prices are: 1 to 4 barrels, in one delivery, raw, 75c per gal.; boiled, 78c per gal.; net 30 days, f.o.b., Montreal.

GROUND WHITE LEAD—Quotations for ground white lead are much stronger than for some time past, and with the extreme firmness in linseed oil it is thought that the recent advance of 10c is but a stepping stone for much higher figures. We quote: Strictly pure about $5.35 to $5.85, according to quality, and No. 1, $4.95 to $5.35, f.o.b., Montreal.

RED LEAD—The market shows fair inquiry, with stocks in good shape. No change is reported and we quote: Genuine red lead in casks, $4.25; in 100-lb. kegs, $4.75; less quantities at $5.75 per 100 lbs.; No. 1 red lead, casks, $3.75; kegs, $4.25, and smaller quantities, $5.25.

WHITE ZINC—The output for the year has been most encouraging, and while the figures are unchanged the turnover shows a good consumption. We quote: Dry V.M. Red Seal, 7½; Red Seal, 7c; French V.M., 6c; Lehigh, 5c; white zinc, ground in oil, pure, 8½c; No. 1, 7c; No. 2, 5½c.

PUTTY—The demand has fallen off somewhat but there is still a fair inquiry at unchanged prices. We quote: Standard putty, 800 lbs. in casks, $1.75; in 100-lb. drums, $2; bladder putty, 400 lbs. in barrels, $2.15; in 110-lb. cases, $2.25; in 25-lb. tins, $2.15; 12½-lb. tins, $3.25, f.o.b., Montreal.

TORONTO.

December 17.—December is usually the quietest month in the paint calendar, and the present is no exception to the rule. Since the opening of the month business has dropped off appreciably. Window glass is yet the most active line, with putty holding second place; but neither of these commodities is going out in the volume they did a couple of weeks ago. Glass stocks being small an advance is probable at the opening of the year; and an advance is also likely to take place on white lead at the same time.

Linseed oil has advanced all over Canada. Seed is very high and the English market shows greater strength and higher prices. All the other lines are unchanged in price. While saying the dull season is on it must not be inferred that paints are not moving at all, but only that present business is slow comparatively.

Rosins have fluctuated some in the past two weeks like turpentine, the prices for common grades are again firm while the small quantity of extra fine grades coming forward tends to keep the extra ordinary high price for these goods at the point it has reached for the past two months.

LINSEED OIL—A further advance of 2 cents per gallon has been made on linseed oil. This is, no doubt, the result of the extraordinary advance in the price of flaxseed, the Chicago market being now higher than it has been for the last five years. Under these conditions the prices must remain at the present high point, if they do not even go higher between this and April. What may happen after that is only guess work. The English market, too, has advanced. Local quotations now are 73c for raw, and 76c for boiled in single barrel lots.

TURPENTINE — In turpentine the market has stiffened at Savannah, and prices have gone up to the figure of two weeks ago. Correspondence from that point indicate that this advance will be maintained. The jobbers' price in To-

White Lead

At the present time the white lead situation is interesting.

We are the only firm in Canada who corrode and grind white lead, in addition to making Varnish, Dry Colors, Paints, Enamels, etc., etc.

Our white lead proposition is naturally the very best.

MURESCO

THE
BEST
WALL FINISH.

When you see that subdued, flat, velvety appearance on walls and ceilings which is so much admired, you may be sure it has been produced by "MURESCO." This preparation has many features to recommend it. It is easily applied. One coat, as a rule, is sufficient to obtain the best results. It is economical, as it will take 30% more water than any other similar preparation, and it will not peel, rub off or crack. Are YOU carrying MURESCO?

Elastica Floor Finish

is the BEST finish for floor work. It works with great freedom, covers the maximum area, and produces a brilliant permanent finish.

Extreme Paleness and Great Durability are two of its distinguishing features.

Send for prices and discounts.

INTERNATIONAL VARNISH CO., LTD., TORONTO

Makers of Fine Varnishes **Branch of Standard Varnish Works**

NEW YORK CHICAGO LONDON BERLIN BRUSSELS

ronto has not advanced. It is claimed that there has been an increased demand for turpentine by varnish makers in the Southern States during the past week and that this demand is likely to hold. If this is so, the month of January may see prices higher than they are at the present time. The nominal Toronto market quotation is 80c, but more "turps" are being sold at 79c than at the market price. However, the amount of turpentine moving is small.

GLASS—Still the most active line among paint goods, glass is moving slower just now than for some weeks past. Prices are unchanged the discount remaining at 30 per cent. It is very likely that with the opening of the year 1910, higher prices will rule, for although European prices have not made another advance, Toronto quotations have not yet been based on the several advances made abroad. Stocks are low and replenishment cannot be obtained at the figures that prevailed a year ago.

PUTTY—Like its sister line, glass, putty is an active paint line, though hardly as strong as a couple of weeks ago. The market is firm, though prices are unchanged. Bulk putty in casks is $1.75 per hundred; drums, $2, and bladders in barrels, $2.15.

WHITE LEAD—The situation is unchanged from a week ago. Not much lead is moving this week, though orders on the books call for fairly large quantities before the end of the year. Those lines which advanced last week are holding firm at the higher figures, and all grades show more strength than when the month opened up. There is a strong indication that all white leads will advance with the opening of 1910, or at least before the end of January is in sight. Prices range from $5.55 to $6.10.

RED LEAD—Light trading is passing. Quotations remain at $4.25 to $4.55.

PETROLEUM—Steady business is being done. The market is firm and the outlook good. Prime white is 13½c; water white, 15½c, and Pratt's Astral, 17½c.

PAINT FOR METAL SURFACES.

Asking this question regarding preservative coatings for iron and steel, we find it necessary to point out that a paint which may be a good paint for the under coats may prove to be an undesirable paint for the outer or finishing coats, and vice versa, writes O. C. Harn. We will call the paint which is to go next to the metal the "protective paint," and the paint which comes outside the "finishing paint." The finishing paint should be, in reality, a "protective paint" also, but, for clearness in discussion, it is necessary we should make a distinction.

The protective paint should measure up to the following:

It should form a hard, adherent foundation for subsequent coats. There is nothing else which tends so much to the cracking, checking and alligatoring of paint as the application of relatively hard coats over relatively soft coats. This is an observation which should be kept in mind not only in the painting of metals, but in all painting. That the priming coat should have the power to adhere tenaciously to the surface is self-evident.

The pigment constituents of a protective paint should be inhibitive of corrosion. This means that it should tend to give passivity to the particles of the iron itself—should by its nature tend to prevent that activity of molecules which we have described as galvanic and which causes corrosion.

A protective paint should be a non-conductor of electricity. The corrosion of iron and steel being the result of a galvanic action, it is necessary not only to put on a paint which will be inhibitive—that is, keep out those influences which will set up the galvanic action in the iron itself—but it is supremely necessary also to bar the way to stray electric currents from the outside. In these days, when electrically charged wires run everywhere, under the streets, overhead and through all buildings, the leakage of electric currents is an every day problem. The real solution of the problem would seem to be to confine these electric currents where they belong instead of allowing them to run riot among neighboring property. Motives of economy itself will doubtless some day lead the owners of the runaway electricity to correct this evil themselves, but until that day arrives we must do our best to protect our property against currents which are running amuck.

HANDLING OILS AND TURPENTINE.

A convenient and practical means of handling oils and turpentine has been adopted by Lockwood & Palmer, Stamford, Conn. Three floors are used in the system. On the second floor are five oil tanks holding from 30 to 50 gallons each. These are used respectively for turpentine, boiled oil, raw oil, machine oil and kerosene. An iron pipe runs from each of these tanks down the elevator shaft and then through the wall partition on the first floor, where each end in a brass cock. The oil is drawn off here. The tanks are filled from the equipment on the third floor. An inclined plane, 6 feet long and 2½ feet high at the raised end, leads to a sink directly above the tanks. Each tank has attached a length of corrugated conductor pipe set at the right angle to receive the adjustable pipe which comes from the sink.

When it is desired to fill a tank the pipes are adjusted, a barrel of oil is brought from the cellar on the elevator, rolled up the incline and poured into the sink.

CHEMISTRY OF VARNISH.

It seldom occurs to the dealer or, in fact, to a consumer, the many varied uses to which varnish is put, and the skill required of the manufacturer to meet these demands, writes F. H. Glidden, in Hardware. Of recent years even greater skill and science have been required than heretofore, until chemistry has become the most important factor in the manufacture of varnish.

Chemistry, we are told, is the science which treats of the nature and properties of bodies, dealing with the changes in the compositions and constitutions of molecules. When the constituent parts of bodies are separated from each other, the bodies are said to be decomposed, and the act of separating them is called decomposition. On the other hand, when bodies are so intimately united as to form new and distinct substances their union is distinguished by the name of combination.

The cumulative knowledge of the old and new worlds in the practical manufacture of varnish covers hundreds of technical questions, special subjects and difficult problems, presenting such interest to the practical varnish maker that each question well deserves being studied separately. Practical varnish making cannot be learned from books, pamphlets or trade journals; neither can it be learned in the melting room of a varnish factory exclusively. Theory and practice are both required. There is an unwritten law that suggests to us that science and common sense go hand in hand; hence I am a champion of the former and companion to the latter.

My many years of experience in the varnish business (now forty-three) have been mostly spent in Cleveland, Ohio. Never having made chemistry a study, as applied to the varnish business, or otherwise, I had to engage the services of a chemist in my business, continuously making special grades of varnish to meet the fast-multiplying demands. The component parts essential to varnish making are: Gum copal, linseed oil, china wood oil, turpentine and naptha, shellac and alcohol. The chemistry of varnish is found in combining these ingredients with such vehicles as oxide of manganese, sulphate of manganese, borate of manganese, red lead litharge, sugar of lead, umber, etc. Manganese is more used than any other vehicle in oil, and known in chemical parlance as M.N-02. Added to linseed oil and when carried to a little over 300 degrees, the heat liberates the oxygen, which is taken up by the oil and gives it the strong drying properties sought. The same process is applied to oil treatment with the other oxides mentioned.

The gums used in the art of varnish making and the temperatures in which they are soluble in oil with heat are as follows: Kauri Conal, at 509 degrees Fahr.; Manila 468, North Coast 548, Zannzibar 516, Benguela 507, Sierra Leone 460, Angola 539, Brazilian 453, Damar 314, Mastic 315, and Asphaltum 349 degrees.

The spirit varishes soluble in grain or wood alcohol—sandarac gum, mastic orange and bleached shellac.

The process of varnish making is to melt in copper kettles to the fusing point, then add the required quantity of prepared oil, varying the heats according to the grade of varnish being made, and when cooled to about 300 degrees Fahrenheit, add the spirits turpentine, filter and convey to tank.

James Giffin, painter at Arden, Man., is succeeded in business by N. Edgley.

The Imperial Varnishes and Color Co., Toronto, sustained a loss through fire at their works last week.

Geo. D. Hyde, architect, Montreal, has awarded the general contract for the erection of the additions to the Canada Paint Company at that city to Thos. Wand.

PAINT PROFITS FOR 1910

In all the years that have preceded there should be nothing like 1910 for business. The prospects are so bright that you cannot help see the signs of the times. Building operations are booming and the paint in demand will be enormous. You will require paint to meet this business – paint that is good—paint that has stood time's test. Then it must be at the right price and nicely put up. Here it is:

With Ramsay's Paints as your leading line for 1910, the share of the paint trade that should be yours will be yours. We have plans to help you and wherever our agents have used our plans, their profits have increased, and this will mean your paint profits for 1910.

PRESTON & MONTREAL

100% PURE

THE "WHY" OF IT

The greatest secret of success in making good paint is "just *good old-fashioned honesty.*" Of course it takes skill and experience to combine the ingredients in the right proportions for best results—but honesty is responsible for what goes into the can before the dealer gets it.

Martin-Senour Paint—100% Pure

Has been a success from the first day and all the years since, because we would not *compromise* to meet competition—we said it must be strictly pure—we meant it—and we have stuck to it. It is 100% pure when it is made—100% pure when it is sold—100% pure when it is used—that means 100% more satisfaction to the purchaser.

¶ The greatest secret of success in building up a permanent paint business, Mr. Dealer, is in selling a paint that merits and wins repeat orders—the 100% more satisfactory kind. Write today for our way of assisting the dealer—it means more profit and more business for you.

HARDWARE AND METAL WANT ADS.

can

SWITCH YOU ON THE RIGHT TRACK

If you have any proposition of interest to hardware, stove and tinware dealers, clerks, travelers and manufacturers, a want ad. in Hardware and Metal will solve it for you.

Surely it is worth 25 or 50 cents to find some man in another city, or another province, who is looking for just such a proposition as you have to offer.

Don't wait for something to turn up, you have probably been waiting now a month, or it may be a year—a thing begun is half done. We can switch you to the man you are looking for, but

You Must Take the First Step!

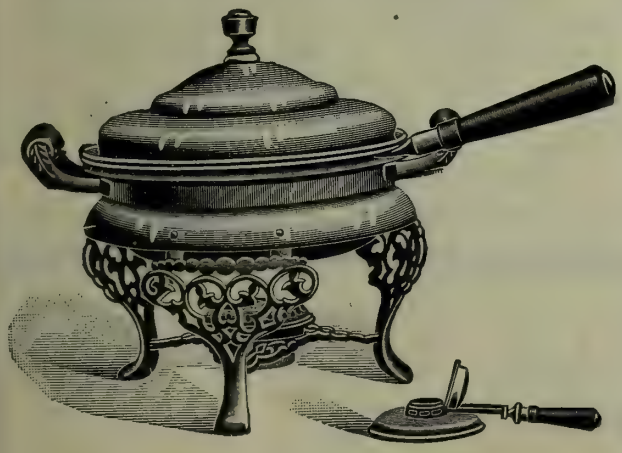
Do you wish to buy a second-hand set of tinner's tools?

Are you an employer looking for employes; or a clerk, wishing to secure a position as traveler?

Have you an old counter or show case for sale?

Do you wish to sell your business or take in a partner with some ready cash?

Try a want ad. in Hardware and Metal. The cost will be small.



2c. per word first insertion.
1c. per word subsequent insertion.
5c. additional, each insertion, when box number is desired.

BOWSER

LONG DISTANCE SYSTEM FOR HANDLING GASOLENE OR KEROSENE

meets the highest approval because it is SAFE. Every feature of the Bowser Long Distance Underground Storage System is endorsed by the most careful insurance companies and fire underwriters.

Here is the Plan. The oil is stored in a tank buried outside, any distance that you may desire away from the building. The tank is made of good heavy sheet steel, riveted and soldered, tested and guaranteed leak and evaporation proof. It is painted with three coats of asphaltum which absolutely prevents the damp earth from acting upon the metal.

The pump is the latest improved, all metal, and measures accurately, gallons, half gallons or quarts at a stroke.

The System Has Never Caused a Fire, nor has an explosion of a Bowser Tank ever occurred. One hundred and eighteen outfits passed through the San Francisco fire, and not one explosion resulted. Some of the pumps were warped and melted by the heat, but the oil remained in good condition in the tanks.

The Bowser System is safe in every way. Write TO-DAY for Bulletin 156.

HOLIDAY PRIZE COMPE-TITIONS

Open to Canadian Hardware Merchants and Clerks

SIX PRIZES FOR WINDOW DISPLAYS

For the three best selling window displays shown in a city over 10,000 population, and for the three best in towns and villages under 10,000 population.

In each division there will be three prizes as follows: 1st, $5 in cash; 2nd, and 3rd, copies of "Hardware Window Dressing" (cloth bound) $2.50—making in all six prizes, totaling in value to $20.

To enter the contest send a clear photo of one or more Christmas windows, made up of articles usually sold in hardware stores, with a description and the name of the person who arranged the display. Photos must be mailed to us by December 31.

TWO PRIZES FOR HOLIDAY ADS.

Two prizes of $5 each are offered for the best newspaper advertisements about Christmas goods, such as cutlery, silverware, sporting goods, lamps, stoves, carpet sweepers, household goods or other holiday lines. Forward one or more clippings from your local paper to us, with the name of the writer of the advertisement, and the name of the paper it was clipped from. As in the window competition, a division is made, one prize being open to those in cities over 10,000 population, and another to those in smaller places.

With the ad. send a copy of any booklet issued, and a description of any special selling plans or display features used during the holiday season.

The awards will be made by experts, and will be announced, with reproductions of the prize ad, and windows, shortly after the close of the contest. All entries should be mailed not later than December 31.

McKINNON CHAIN CO.

BUFFALO, N.Y. ST. CATHARINES, ONT.

The Canada December

To Our Clients:

So many enquiries have come to us in the last two weeks as to our price arrangements for the New Year, that we believe our friends will appreciate a statement in advance of our 1910 catalogue, which will be mailed so as to arrive on 1st January.

We have been extremely desirous to leave our price list undisturbed, and indeed completed our revision nearly two months ago, making very few changes.

The position of the Flax Seed Market, however, led us to withhold the figures until we should find how supplies came out.

It is well that we did so, for the Seed Market has gone against us beyond anything we could have anticipated. In fact, as we write, Flax Seed is in price nearly double what was long regarded as its normal value. At Winnipeg the spot price is $1.56 per bushel, and for delivery in May $1.65, while in Duluth it is 25c more.

The result is that our Linseed Oil for 1910 must cost us at least 20c per gallon more than in 1908, and 15c to 18c more than the average of the year now closing.

This advances the cost of every form of Liquid Paints, but we have decided to limit the changes to such pages of our catalogue as necessity *compels* us to deal with.

Our Extra Standard and Standard grades of Mixed Paint, pages 30 and 31, are advanced ten cents per gallon. Small packages ½c per pound.

Graphite and other Mineral Paints, pages 32 and 33, are advanced for best grades ten cents per gallon, and second grades five cents per gallon.

THE CANADA PAINT

MONTREAL TOR

14th December, 1909.

Paint Company's Letter

In Varnishes we leave the list untouched in hope that the stock in our tanks will tide us over the first half of the year, after which we will be guided by the market conditions.

In the same hope we leave unchanged all Paste Colors in Oil, except two or three items that required adjustment.

Smaller canned goods are also continued at former prices, such as Stains, Enamels, Fillers, Semi-pastes, Coach Colors, Floor Enamels, etc.

We feel assured that all our friends realize that we always keep our prices as low as business conditions allow. *We still maintain our claim to give the best value that is given in Canada.*

We have always been so loyally supported that year by year we improve our equipment, and the new year will find our appliances and arrangements in advance of anything we have had hitherto.

Our equipment in this Dominion in Real Estate, Plant and Appliances is now over *three quarters of a million* ($750,000). Our stock of merchandise carried is *over half a million* ($500,000).

Our sales within the Dominion for the year just closed have exceeded a million and a half ($1,500,000) and surely this tells us that our customers appreciate our operations and believe in our products.

With sincere good wishes to all our clients for 1910.

We are, always at your service,

THE ROSS SPORTING RIFLE

A U. S. Sportsman's Estimate

From all over the world come testimonials similar to the following—each an unqualified endorsement of the Ross Sporting Rifle :—

Uno M. Montin, Calumet, Mich., writes on April 12th, 1909,—

"The Model E Sporter I ordered arrived yesterday. Allow me to compliment you on the excellent and superior finish all through. It is all up to my expectations. I consider it the best value in the shape of a sporting rifle I ever had for my money."

When sportsmen everywhere have this opinion of the Ross Rifle—men who are acquainted with all makes of fire-arms—isn't it more than likely **the demand in your own neighborhood** will increase ?

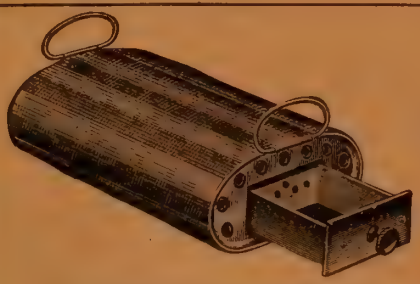
Clark Carriage Heaters



COST NO MORE

than the cheap, ***cast end*** makeshifts sometimes offered to dealers who have not had an opportunity to examine and know the Clark heaters.

The cheaply constructed cast end heater is liable to break at any time if it is brought in forcible contact with any hard object.

There are no castings of any kind in a Clark heater.

A Clark heater will not bend or break. Each one is guaranteed to please or money refunded.

No. 5B Clark Heater

No. 7D, showing side and end ventilators.

No. 7D Clark Heater

No. 7X Clark Heater

This is a profitable winter line to handle. Clark heaters are the most extensively advertised to your customers of all heaters.

All the leading jobbers of Canada carry Clark heaters. Insist on them, for they cost no more and please better.

CLARK COAL

is the recognized king of heater fuels. Every brick is guaranteed to give 25 per cent more heat than any other prepared fuel on the market.

Our ABC Coal is guaranteed to equal any coal on the market, outside of our Clark Coal.

Get this fuel, which has a reputation, and lives up to it. It means satisfaction to you and your customers.

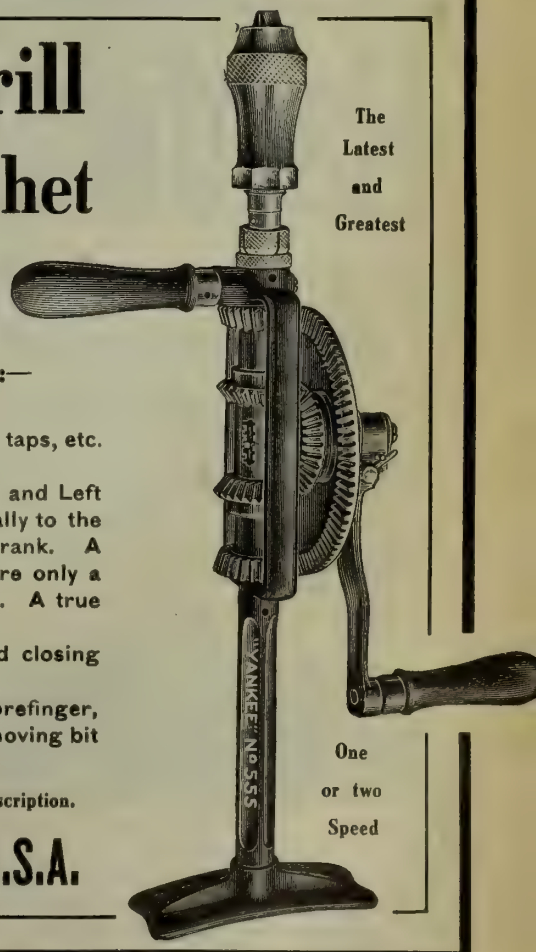
"YANKEE" Breast Drill with Automatic Double Ratchet Adjustable Ball Bearings



The Latest and Greatest

Notice the little shifter between the gears:—

Notch 1—gives you a plain drill.
Notch 2—A Left Hand Ratchet for removing taps, etc.
Notch 3 - A Right Hand Ratchet.
Notch 4—An Automatic, Alternating Right and Left Hand Ratchet, the bit turning continually to the right regardless of the motion of the crank. A great advantage at close quarters where only a short throw of crank can be obtained. A true time saver.
Notch 5—Locks drill for opening and closing chuck.
Lever A—Change of speed with forefinger, without releasing hold on crank or removing bit from hole.

Sold by leading jobbers. Write for full description.

One or two Speed

NORTH BROS. MFG. CO., Philadelphia, Pa., U.S.A.

Get After the Merchants in Your Town

Do you know that our Metallic Ceilings and Walls are the most sanitary and artistic interior coverings a merchant can have in his store? They prevent the dust and dirt falling —a continual nuisance with plaster and wooden ceilings—and add so much to the appearance of the store—so many varied, artistic designs suitable for any class of business to select from.

Further, our Metallic Ceilings and Walls are fire and moisture proof and will greatly reduce insurance rates. They are very economical—in fact will last a lifetime. We use only the highest grade steel plate—every design being carefully and deeply stamped—absolutely no bulging—the best metallic ceiling on the market.

Get after this business—convince your fellow merchants of the many advantages of Metallic Ceilings and Walls and then send measurements of their stores for estimates.

We are manufacturers of Eastlake Metallic Shingles, Metallic Siding, Lath, Cornices, Skylights, Ventilators, Finials, Pressed Zinc Ornaments, Eavetrough, Conductor Pipe, and Fireproof Windows and Doors.

SIMONDS No. 8½

This Saw is of the general style and shape which carpenters have been accustomed to using for years past. Has a carved apple handle with highly polished sides and edges, making a very pretty Saw. Holds its cutting edge and saws true. Its high quality and even temper are due to the fact that it is **Made of Simonds Steel.** Covered by the broadest Simonds warranty.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, munufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

The Value of the Annual Inventory

Reasons Why it Should be Taken—The Closer to the First of the Year the Better—Have a Clearing Out Sale in January—To be of Value the Stocktaking Must be Accurately Done—Capital in Old Stcok is Like Paying for the Privilege of Lending Money.

The taking of an annual inventory of the hardware stock is practically universal among Canadian hardwaremen at the beginning of each year, the jobbers and some retailers using the week between Chirstmas and New Years, the majority of retailers preferring the month of January, and some laggards putting it off until February. Very few there are who are so hapzard in their methods as to neglect this most necessary proceeding to all who desire to know at least once each year as to where the business realy stands—whether the year has shown a profit or a loss.

The more accurate the merchant is in his stock taking the closer he will be able to figure out his standing. To make a casual estimate may lead to disaster, and consequently, stock taking must be carefully done if it is to have any value whatever. To do things in a slip-shod way once, is apt to lead to more lax methods afterwards, with the result that the merchant must lose confidence in himself. And self-appreciation and confidence is an important factor in building up confidence amongst one's fellows.

Good habits, like evil ones, have a tendency to establish and perpetuate themselves. The man of regular practices is confirmed in them by time, while the individual of the opposite kind becomes constantly more and more careless, so that, at last, he scarcely knows where he stands. In order to avoid this deteriorating process from setting in and spreading in his business, the dealer should make it a rigid rule to take a thorough inventory at least once a year, and this can not be done without stock taking.

An exchange recently likened business to a wrestling match, and gave as an illustration one of those beautiful myths in which the ancient Greeks and Romans loved to conceal the great lessons of creation, philosophy and experience. According to this story, a child of the earth once wrestled with a being of a higher order. He was constantly thrown, but every time he touched the ground he jumped up and continued the struggle with renewed vigor. His dread antagonist perceived this, so with a mighty effort he lifted the earth child off his feet—and strangled him in mid-air. This story contains a moral for business men. So long as we plant ourselves upon the solid ground of facts, we are comparatively safe. But when we take to summarizing, approximizing and idealizing—in other words, when we are suspended in mid-air—we become vulnerable.

Money in Dead Stock.

In every business a certain amount of surplus stock accumulates, every article representing so much cash tied up in goods, which continue to decrease in value the longer they are held on the shelves or in the warehouse. To hold these goods is like paying the banker interest for the privilege of depositing money in the bank, the stock depreciating in value, where it ought to be turned into cash capable of earning returns for the merchant. Store space is also being taken up by this stock of surplus goods, space which ought to be used to store or display fresh goods. Then the results of stocktaking will show where mistakes have been made in buying, and where an extra sales effort might have resulted in larger sales of the line showing left over stock. And still another advantage is the uncovering of lines, which can be used as the basis for special sales during the dull weeks before spring opens. But most of all is the feeling of comfort in knowing just where one stands and the knowledge that plans can be laid for the coming year without dependance upon a guesswork foundation.

Lessons to be Learned.

Inventory taking furnishes the alert dealer with a variety of excellent pointers. It shows how the various goods are moving; which are the popular brands, and those which are slow selling. When next ordering, some things should be cut out entirely, others ordered in reduced quantities; while the more lively sellers will be required in larger assortments. Thus the sources of weakness are constantly being removed, while those that strengthen are gathered up for further campaign purposes. Stocktaking also furnishes an opportunity for making a general parade and inspection, as it were, of all goods handled. It quickens the entire force, both in thought and action. It revives recollections that should not be allowed to fail entirely. It leads to some questionings, and to much sorting out and re-arranging. All this is educative, if nothing else, as it serves to familiarize the proprietor and the clerks with neglected cupboards, shelves and dark nooks and corners of the premises.

Checking over the stock acquaints the proprietor and clerks with the goods as nothing else can. It is a kind of general burnishing up all around, which brightens men, as well as goods and store. Inventory taking is a preparation for the future. Indeed, for the really live store, this is practically its main purpose, as shown by the frequent clearance sales made by the big department stores. The moral contained in the lines of Tennyson, "Ring out the old, ring in the new; ring out the false, ring in the true," has an excellent business application, if it but persaude the dealer to replace old stock with fresh goods.

The most convenient time for taking stock is just after the rush of holiday trade, when it is difficult to work up business, owing to customers having their minds more upon family gatherings and holiday celebrations than upon business matters. The stock, then, ought to be at its lowest, and a thorough going over will uncover many lines, which can be used to advantage in an "after-inventory sale," just after New Year's. Then the close of the business year is the opportune time for the merchant to now the result of his inventory.

Kansas Firm's New System.

A new method of invoicing was tried by the A. J. Harwi Hardware Co., Atchison, Kansas, when taking stock a year ago, the new plan, however, being confined to the stock on only two of their premises. Under the old method the work began about Dec. 1, and the stock clerks wrote down the items on small slips of paper, which were placed in places convenient to the stock. Then the order clerks made corrections on the slips as goods were shipped out between the time when counting began and the first day of January. This system was found to be a cause of many mistakes, since the slips had to be corrected without checking back, and errors were continually made, not only in correcting the slips, as goods were taken away, but in transferring the quantities to the inventory blanks. The new system was developed in the effort to avoid the use of slips and consequent errors. The heads of the departments in which the trial was made had blank forms type written, based on their stock books and covering all the goods found on these floors. Full size foolscap sheets were used, and the items were entered according to class, forming a skeleton of the stock just as it lay, which was at the same time priced in full.

At the time of inventory the date being Dec. 26, the buyers of all the departments on the two floors went through them with the sheets, which had been prepared and themselves filled in with pencil the quantities of stock on hand, as they were called off by the stock clerks. One floor was taken in this manner in a single day, beginning at 8.30 in the morn-

ing, and the other in about a day and a half. Besides avoiding the errors and disadvantages of transcription the fact that the buyers did the writing went a long way toward preventing mistakes, as each was thoroughly familiar with the stock through his purchases during the year and could tell approximately when he heard a quantity called whether or not it was likely to be correct. The completion of the job in a short space of time was facilitated by having the clerks go over the entire stock in advance, straightening and cleaning it up, as they had opportunity, and piling the goods in even piles so that counting would be easy. The minute the stock was down it was ready to be extended, having been priced when it was run off on the typewriter with speed and accuracy.

The company states that it obtained on these two floors the quickest and most accurate inventory it ever took, and the experiment was so successful that this year it will be carried out throughout the entire establishment.

GETTING NARROW IN BUYING.

Hardware merchants should watch themselves closely for fear of becoming narrow in the buying of sporting goods. He does not believe that merchants as a rule to-day depend upon their selling ability as much as they did a few years ago. In other words they blow too much with the wind, and buy only good stocks "of the best sellers," and do not buy assortments. "I have noticed," says this authority, "frequently of late that a merchant will many times buy and show an article that does not bear him a living profit, without making an effort to sell some other article in its place that does bear him the profit he should have. The principle is wrong. The retailer to-day should depend upon his selling ability, and develop the selling ability of his salesmen more than he ever has before, in order to sell goods that bear him the right kind of profits.

"These remarks apply to smaller items, as well as guns, and the more expensive goods. For instance, I have in mind merchants that carry pretty fair stocks of sporting goods, and still they will not buy leather gun cases or hunting coats to retail for $4, $5 or $6. They will tell you that their trade does not ask for those goods, but the trade never will ask for those goods unless the dealer educates them up to desiring the better quality, or until some competitor comes to town who carries better goods, and gets the cream of the business."

Programme for Hardware Convention at London

Space in Exhibition Hall all Disposed of Six Weeks in Advance—Preparations Being Made to Entertain at Least Four Hundred Visitors—Travelers Report Retailers in all Parts of Ontario Making Plans to Attend Convention—The Program Outlined.

Canadian Wholesale Hardware Association—William Starke, Montreal, president; S. H. Alexander Hamilton, vice-president; W. J. Lawson, S. R. Kennedy, Toronto; A. Jeannotte, Montreal; A. Prudholme, Montreal, and Joseph Lemieux, Quebec, directors; James Hardy, Toronto, secretary treasurer.

Maritime Wholesale Hardware Association — W. S. Fisher, St. John, president; Percy Simmons, Halifax, vice-president; F. R. Murray, St. John, secretary-treasurer.

St. John Hardware Merchants' Association — John A. McAvity, president; W. S. Clark, secretary.

British Columbia Hardware Dealers' Association.—W. C. Stearman, Vancouver, president; H. T. Kirk, New Westminster, vice-president; G. Blakely, New Westminster, H. Martin, Vancouver, and W. R. Owens, Vancouver, executive committee; Wm. J. Butt, Vancouver, secretary-treasurer.

Hardware and Metal Association of British Columbia.—John Boyd, Vancouver, president; J. A Cunningham, New Westminster, vice-president; John Burns, Vancouver, secretary-treasurer.

Alberta Hardware Merchants' Association John Drewe, Calgary, president; R. L. Gaetz, Red Deer, first vice-president; J. Dowcett, Edmonton, second vice-president; L. W. Kribs, Frank; C. W. Marshall, Nanton; W. G. Stafford, Lethbridge; A. E. Clemens, Sedgwick, and C. W. Hislop, Carstairs, executive committee; A. T. Linton, Calgary, secretary-treasurer.

Winnipeg Retail Hardware Association. — Charles Mulvey, Winnipeg, chairman; J. E. McRobie, Winnipeg, secretary-treasurer.

Ontario Retail Hardware and Stove Dealers' Association.—D. Brocklebank, Arthur, president; A. Ballantyne, Brantford, first vice-president; M. S. Madole, Napanee, second vice-president; John Caslor, Toronto, treasurer; J. Walton Peart, St. Mary's; D. Cinnamon-Lindsay; R. C. Chown, Belleville; H. P. Morgan, Peterboro; J. S. Weichel, Elmira, and J. R. Hambly, Barrie, executive committee; Weston Wrigley, 10 Front St. E, Toronto, secretary.

Toronto Retail Hardware Association — Samuel Pearsall, president; Joseph Harding, secretary.

Ottawa Retail Hardware Association—R. Mulhall president; J. G. Cowan, secretary.

LONDON CONVENTION PROGRAM.

Tuesday, Feb. 8.

9 a.m.—Executive committee meeting and opening of Hardware Exhibition.

2 p.m.—Convention, open to any in trade. Reports of officers; appointment of committees; "Mock Sale"; address on salesmanship; open discussion.

8 p.m.—Smoking concert in Exhibition hall.

Wednesday, Feb. 9.

9 a.m.—Convention, business session and "Question Box" discussion.

2 p.m.—Visit to McClary Foundry and enamelling plant. Hardware Exhibition open.

8 p.m.—Convention, "Question Box" discussion. Public admitted to Hardware Exhibition.

Thursday, Feb. 10.

9 a.m.—Convention, business session, reports of committees, nomination of officers, etc.

2 p.m.—Visits to London hardware manufacturing plants. Hardware exhibition open.

8 p.m.—Complimentary banquet tendered the members of the Retail Hardware Association by London hardware manufacturers and jobbers.

Friday, Feb. 11.

9 a.m.—Convention closing, election of officers, and meeting of new executive committee.

1 p.m.—Hardware Exhibition.

BIG CROWD PREDICTED.

W. B. Screaton, representing the McClary Mfg. Co. north of Toronto, reports a keen interest in the coming convention of the Ontario Retail Hardware and Stove Dealers' Association at London, on February 8 to 11, and states that all who attended the Hamilton convention will be on hand at London, while many firms on his ground, not yet members of the association, have expressed their intention of attending the meeting at London. In Mr. Screaton's opinion there will be at least 400 retailers at London during convention week.

COMING A LONG DISTANCE.

E. W. McClung, Elk Lake, who has a good trade in miners' and prospectors' supplies in the north country, intends taking in the convention at London. He writes:—

"I am going to make it a point to be in London for the convention in February, as I think there are many things I can learn regarding the hardware business, and think that the experience of meeting the older men in the business will benefit me greatly, as will also a rest for the week."

ADDITIONAL EXHIBITORS.

In addition to the list of manufacturers given in Hardware and Metal a couple of weeks ago, as having arranged to exhibit at the London convention, the following have decided to make exhibits.

J. H. Connor & Co., washing machines, Ottawa.

International Varnish Co., varnishes, Toronto.

Canadian Oil Co., paints, Toronto.

Atkins Saw Co., saws, Hamilton.

Space in the Exhibition Hall is now at a premium, more applications having been received for space than can be allotted.

Attention will now be given to completing arrangements for the Model Hardware Store display in which the following firms have announced their intention of making displays:—

Dennis Wire & Iron Co., and Hobbs Mfg. Co., London, steel window construction and plate glass windows.

Dominion Office & Stove Fittings Co., London, silent salesmen.

Cameron & Campbell, Toronto, hardware shelving.

National Cash Register Co., Toronto, cash registers.

Regarding this feature the National Cash Register Co., write. "Our idea would be to equip the store with a proper National Cash Register system. We believe this idea of a model store is an ideal one, * * * and are sure you can make this an exhibit, which will interest every hardware merchant in the country. There are many hardware stores that can stand a lot of information along the lines of store arrangement, window dressing and store system."

WON TRAVELERS' CONFIDENCE.

The Illinois Retail Hardware Association has 200 traveling salesmen on its associate membership roll. The Ontario Retail Hardware and Stove Dealers Association begins 1910 with 26 salesmen as honorary members. The association has won the confidence and friendship of most of the travelers calling on the retail hardware trade in Ontario, and it is seldom that the voice of the "knocker" is now heard, saying that the members of the retail association are "all little fellows without standing in the trade." When the Retail Hardware Mutual Fire Insurance Co. gets going the salesmen will be enthusiastic boosters.

INCREASES INSURANCE REBATE.

At the annual meeting of the Iowa Hardware Mutual Insurance Association held in Mason City, recently, the board of directors declared a dividend for the 1910 expirations on all business written during 1909, of 50 per cent. of the premium paid. The reports of the secretary showed the work of the Iowa Hardware Mutual to be in a very satisfactory condition, with an amount of $3,000,000 insurance in force, and rebates paid for policies expiring in 1909 of nearly $16,000, and the total cash savings since the opening of the books of the company paid in cash dividends to its policy holders of nearly $50,000. The reports for the ten months of 1909 showed a gain in cash assets from the amount reported Jan. 1, 1909, of 80 per cent. and a gain in insurance in force of 28 per cent. The company was organized in 1903, by members of the Iowa Retail Hardware Association, and the rebate last year was 40 per cent. This is the third hardware mutual to reach the 50 per cent. standard.

A HARDWARE CONVENTION SONG.

One of the song hits of the present season is entitled "Yip-I-Addy-I-Ay," and to the tune of this catchy music garden song a hardware rhymster has put together some words, which, it is expected, will "catch on" at the London convention. The verse and chorus run as follows:—

YIP, THE HARDWARE TRADE.

(Tune "Yip-I-Addy-I-Ay.)

It's our contention
That this convention
Is the best that ever have had
For we're in such number
That we haven't a grumbler
And none of us can feel sad.
'Twould have meant conviction
To make the prediction
That success would come so soon,
But Hardware retailers
Are "never say fail"-ers
So here's to the victory we've won.

Yip-I-Addy-I-Ay-I-Ay,
Yip the Association,
It's the mascot that beats them all,
Standing together we have the call.
Yip-I-Addy-I-Ay-I-Ay
We feel just like shouting "Hurray! Hurray!"
Members growing each year
We have nothing to fear,
Yip-the hardware trade.—Repeat.

Hardwaremen intending to visit the convention can secure the music for this song in their local stores or for 20 cents (mailed) from the secretary of the association.

J. Walton Peart, St. Mary's, has suggested that a quartette be formed amongst the members of the association to help in making the lighter side of the coming convention a greater success. Members who are willing to aid in this direction are requested to write Mr. Peart or Secretary Wrigley.

CONVENTION NOTES.

The officers cannot make an association a success; they can help, but at last it depends on the members.

"It is much easier to make a dollar on mutual fire insurance than it is to make a dollar by hitching up your team and delivering three kegs of nails a mile out of town." Sarone E. Jones before National Retail Hardware Convention at Milwaukee.

W. L. Bott, an Indiana hardwareman, who has just sold his business to become manager of a bank, states that he has been doing a yearly cash business of $24,000 on a $6,000 to $7,000 stock. Attend the retail hardware convention at London and compare your business turnover and stock carried with other hardwaremen from different parts of Ontario. You may learn some pointers worth the cost of the entire trip.

Sharon E. Jones, Richmond, Indiana, a member of the executive committee of the National Retail Hardware Association, has accepted an invitation to attend the London convention and lead the "Question Box" discussion, also giving an address on Mutual Fire Insurance at the banquet. Mr. Jones' firm went through a disastrous fire some time ago and he can speak from experience. He was secured after F. Russell, of the Russell Hardware Co., Toronto, had expressed his inability to lead the "Question Box" discussion.

1910 CALENDARS.

The Brantford Roofing Co., Brantford, are supplying their customers with one of the neatest calendars we have seen this year, an embossed representation of a sturdy boy helping his little sister to put some coppers into a bank. The advertisement is secondary to the picture and it will not prevent the calendar from hanging in any hardwareman's parlor or dining room. The point is made "Using Brantford Roofing is like putting money in a bank," and the picture carries out the idea to perfection.

The Capewell Horse Nail Co., Toronto, have issued a very striking calendar showing an irate motorist held up on a country road by a badly torn tire caused by running over a horseshoe from which several nails protrude. It is considered seven years good luck to find a horse shoe, but the automobile tourist doesn't agree with this superstition, a sign post near by telling him that he is "40 miles from anywhere." The Capewell Co. take the opportunity to drive home one of their truisms—that their nails hold until the horse wears out the shoe, or it is removed by the blacksmith.

HARDWARE LETTER BOX

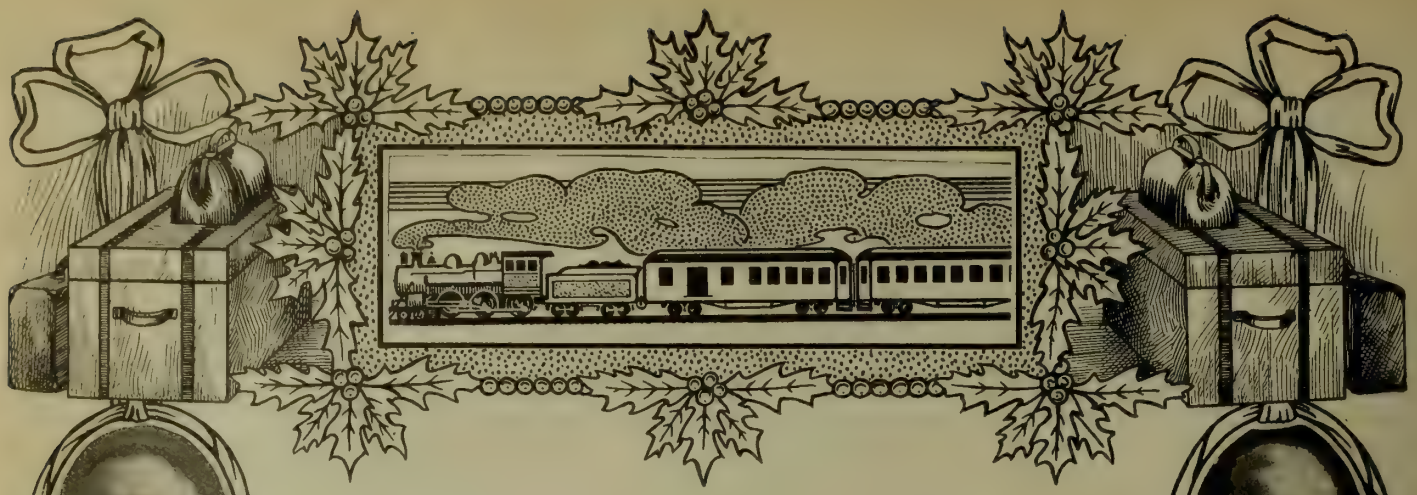
Any question on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

GAS MACHINES.—W. H. Turnbull & Son, Brantford, ask for the names of manufacturers of acetylene gas machines.

W. F. Earl, Athens, Ont., or the Beach Foundry Co., Winchester, Ont.—Editor.

ANGLE STEEL TAPES.—John Bailes & Son, Cobalt, ask for the address of Roe & Sons, a New York State firm making angle steel tapes. About three years ago they sent samples to hardware firms in Ontario, but we cannot recollect their address.

Justus Roe & Sons, Patchogue, N.Y.—Editor.



FORSTNER AUGER BITS — The Northern Hardware Co., Edmonton, ask the name and address of the makers of Forstner auger bits.

These tools are made by the Progressive Mfg. Co., Wilmington, Del.—Editor.

STAR BELT HOOKS. — The Myers Hardware Co., Stratford, ask for the name of the manufacturers of "Star belt hooks."

The makers of these hooks are the Columbia Novelty Mfg. Co., St. Louis, Mo.—Editor.

Luxor Temple, of the Mystic Shrine, has taken up the project of erecting a Masonic Temple at a cost of $30,000, at St. John.

SAMUEL J. MATHEWSON.
The President, whose Absence was Due to Illness.

Commercial Travelers Make Merry

Staff Correspondence.

TREAS. MAX MURDOCK.
One of the Busy Men at the Banquet.

Montreal, Dec. 22.—Three hundred and fifty travelers gave themselves up to the enjoyment of "annual banquet night" at the Windsor Hotel, Montreal, on Monday evening, Dec. 20th. Loyal members of the Dominion Commercial Travelers' Association, were they, members of a society which in these days is growing as fast as the population of the Northwest. Acting chairman vice-president J. Bevans Giles, in his remarks, called attention to the 400 new members who had joined during the year—and he never turned a hair in making the statement—and those who know him will understand why he did not. Friend Giles simply has to be economical in some things.

But it was a grand night, with a supplementary grand morning, and no one felt that there could have been greater bliss provided.

President Was Ill.

Only one damper was cast on the enjoyment of the evening, and that was the absence of the president, S. J. Mathewson, who, at the last moment, was taken ill, and ordered to bed. He was greatly missed, for his humorous remarks the previous year, and his witty introductions of various speakers made a name for him as a chairman and toastmaster a year ago. Numerous expressions of regret were heard on all sides.

To get down to a report of actual proceedings, perhaps it would be well to describe the geographical lay out of the Red Dining room of the Windsor, and its occupants, and to trace the source of the streams of eloquence usually called "flow of soul" by enterprising newspapermen who have been taking care of other flows—and not ice water floes at that.

As previously inferred, Bev. Giles acted as chairman, being in the central seat of the guests' table. He was bounded on the north and the south by Bordens, Sir Frederick on the right and R. L. on the left, while to the east, in front of him, he beheld the "flower of the association," seated in groups of six and eight at tables whereon were served the viands and pictures of our old friend Cap. Bernier. To the rear of the worthy chairman was located the door provided for the escape of innocent spectators in the event of the political nature of speeches delivered arousing the fighting blood of muscular followers of our parliamentary leaders on both sides of the House. This wise precaution on the part of the Dinner Committee is to be commended.

Max and the Explorer.

It appeared, after a casual glance around, as if that tireless worker Max.

BRUNO TRUDEL,
One of The Directors of The Association

Murdock, the treasurer, was rusticating in the refreshment parlor in the basement, but a second look disclosed him seated next to Captain Bernier, whom he was endeavoring to influence for some purpose or other. Some stated that he wished the Captain to organize a branch of the Association in the Arctic circles, but those who best knew the treasurer were convinced that he simply desired to have Bernier join the St. James Literary Society.

As for Bill Egan, we didn't exactly lose him, for we could always see him towering head and shoulders above everyone, but it was almost impossible to talk to him. He was very busy, with the accent on the very. Where he sat during the greater part of the evening no one knew. He was seen occasionally to whisper advice to R. L. Borden, whose speech was, as a result, a masterpiece.

Missionary Life.

Sir Frederick Borden, the first speaker, sent everybody into the seventh heaven of delight, made every man present feel he had wings sprouting, by stating as his opinion of the commercial traveler, in a few words, that he was the ideal missionary. He tumbled his listeners from the seventh floor, and caused the wings to "ingrow," however, in the next breath, explaining that he referred to trade when he applied the term missionary. The compliment was accepted with thanks, however, inasmuch as its truth was recognized. Proceeding, he called the traveling man a disseminator of ideas, which was further gospel, for the average commercial man of to-day is a man of higher intelligence and broader ideas than most other average men following a different trail to the grave. Sir Frederick told his listeners something about the policy of the Government in the matter of defence, and everyone was greatly interested, for no more patriotic Canadian exists than the traveling man who has been over the Dominion and recognizes what a magnificent country we have.

Lead the Boosters.

Hon. Frank Oliver told the boys that they were the only true and ever-existing optimists. Their spirit of optimism,

he said, had done as much as anything else to build up the west. He claimed credit for the west for the origin of the expression in vogue in that portion of Canada, "It's cold, but you don't feel it."

Hon. Jacques Bureau put in, among other things, a good word for the hotels in Three Rivers. There are some good ones there now. Hon. Jacques did not say that the spectacular fire in Three Rivers several months ago was arranged with a view to securing for Three Rivers more than one first-class hotel. Doubtless this, though, was in his mind. The boys who cover Quebec Province are not sorry that there are now more good hotels in the little city.

R. L. Borden, the Conservative leader, was given the glad hand when he arose. He knows about as well as any speaker how to tell a lot of men what fine fellows they are, without saying it in just those words. His address was interesting and well received.

Cheer up the Weary.

F. D. Monk was given a reception which proved that he was also considered a good fellow. He remarked that he had frequently run across traveling salesmen in his own journeyings, and they had cheered him and encouraged him in his work. One does need and appreciates some cheer and encouragement when those "dry" towns are encountered when navigating the stormy political sea. Travelers certainly are a man's best friends.

Max Murdock found time, despite his many self-imposed duties, to propose the toast, "Our Guests." He did it nobly and well. Judge Lafontaine, Ald. Carter, R. C. Smith, Henri Bourassa and Captain Bernier responded. His Lordship referred to the excellent system of technical education being introduced in Quebec Province. R. C. Smith made a stirring and patriotic speech. Ald. Carter, who represented the Mayor, and who has been doing great work toward securing the enactment of a by-law for the early closing of saloons, made a neat address.

Of Henri Bourassa we cannot say too many nice things, since he is soon to be confrere, through the establishment of a new daily paper. But he made a speech in which he said much, and gave his auditors what he called the French-Canadian side of the Defence question.

The Gum-Drop Market.

Captain Bernier made a distinct hit. He was introduced as the greatest traveler in Canada. Becoming reminiscent he related his early struggles in the north, when he was in the "retail" business, annexing for Canada small sections of ice floes and islands of 22,000 square miles or more in extent. Latterly, as a traveler, he had been doing some "wholesale" business, having taken possession of one piece of country of an area of 500,000 square miles. He cordially invited the boys to spend their week ends on Melville Island, but suggested bringing a gun along in all parties over five. Speaking of trade prospects in the north he said that there was room for great expansion in the distribution of old bonnets and gum-drops. Someone asked him about Cook, and the Captain carelessly replied, "Cook is an uncharted rock. We haven't placed a buoy on him yet."

Some of the Workers.

Everything considered, the dinner was a huge success. All praise is due to the dinner committee, of which W. J. Egan was chairman, and the following gentlemen the other members: A. J. Brown, P. H. Burns, A. Chaput, F. S. Cote, E. Daoust, J. A. Dawson, L. Decelles, J. T. Dwyer, A. M. Ellicott, J. B. Giles, H. Langelier, J. O. Laporte, D. M. Lefebvre, H. M. Levine, S. J. Mathewson, Major J. T. McBride, Max. Murdock, Luke F. Moore, F. N. Picard, Chas. Petrie, Bruno Trudel, R. C. Wilkins, I. Stuart Wotherspoon, S. Woods, John E. Wright, H. W. Wordsworth, secretary.

LUKE F. MOORE,
A Director of the D. C. T. A.

MUTUAL BENEFIT OFFICERS.

Toronto, Dec. 23.—The President of the Commercial Travelers' Mutual Benefit Society for the coming year is Mayor Oliver, Toronto. The annual nomination of officers took place on Saturday at St. George's Hall, Toronto. The other officers elected were vice-president, Robert Maxwell; treasurer, H. Goodman; Toronto trustees, John Gibson, R. G. Hector, C. T. Parsons, S. R. Wickett, S. M. Sterling, A. J. Tipping, Robert Forbes, John Burns, and W. T. B. Laurie. All the trustees for outside points were also elected by acclamation. Since this society was formed thirty years ago over half a million has been paid in death benefits to widows and orphans of the members.

OFFICERS RE-ELECTED.

Quebec, Dec. 23.—The Quebec Commercial Travelers' Association held their annual meeting last Saturday. Officers were elected for the ensuing year. No changes were made, all former offices being re-elected. They are as follows:

President—Jos. Poirier.
1st Vice-Pres.—Jos Cote.
2nd Vice-President—Ovide Hamel.
2nd Vice-President—G. Van Felson.
Secretary—Arthur Tremblay.
Assistant Sec.—Almazar Richard.
Treasurer—Jules Lanonette.
Directors—G. C. Giguere, P. Tremblay, A. Morency, E. Lemieux, Louis Trepanier, George Simoneau.

The annual report showed that the finances were in a very prosperous state.

TORONTO TRAVELERS ELECTION.

Toronto, Dec. 23.—Amendments to the by-laws created lengthy discussions at the annual meeting of the Commercial Travelers' Association of Canada, which took place this afternoon at St. George's Hall. About 150 travelers were in attendance, and on many occasions two, three and even four speakers were on the floor at the same time to advance their respective arguments. John Gibson, the president, was in the chair.

All of the amendments carried, but one. This referred to a change in the systems of admitting members to the association. Outside of this the most important was the change in the by-law referring to qualifications. Hitherto in order to become a bona-fide traveler, a man had to travel at least 3 months in Canada. In future the following addition will be made: "Or any part of the British Empire."

The following was the result of the ballot:—

Pres.—Jno. Gibson, (accl.).
1st Vice-Pres.—Robt. Gemmell, (accl.).
2nd Vice-Pres.—S. M. Sterling, (accl.).
Treas.—E. Fielding.
Directors for Toronto Board.—Jas. G. Cane, J. H. Lumbers, Geo. W. Moore, C. J. Tuthill, J. W. Charles, W. R. Mosey, D. H. MacKay, J. H. Wildfong and Alex. Cook.

Hamilton Board.—Geo. M. McGregor, H. G. Wright, C. C. Smye, E. O. Zimmerman, W. H. Dean and A. F. Hatch.

John L. Ross, secretary of the Pease Foundry Co., Toronto, returned last week from a three-months' tour of the west. While in Winnipeg Mr. Ross arranged for new premises for the Pease-Waldon Co., the concern which looks after the business in the west. The new warehouse is located on Donald Street. Mr. Ross spoke enthusiastically of the past year's business in Western Canada, and expects 1910 to be a record year. Vancouver particularly attracted his attention, as showing immense strides in the building line in recent years.

PLAN NOW FOR 1910.

The end of the year approaches and hardwaremen during the coming week will be judging of results in the aggregate and carefully sifting the experiences of the past twelvemonth in planning for the future.

It has been a test year for the optimist. Signs of prosperity and reasonable cause for doubt were in the balance at the close of 1908. During that year there was depression throughout the business world. While 1907 had been a bumper year, that which followed was seriously reactionary. Failures in Canada in 1907 numbered 1,361; in 1908 they swelled to 1,712, and the falling off in the trade of the Dominion was enormous. Money was scarce.

With the beginning of 1909, Canadian commerce showed signs of returning vigor. No good reason appeared why the year should not make towards normal conditions. The winter over, the stride of prosperity quickened, and business men became hopefully prophetic; everything looked good.

To the manufacturer it was a period of self-examination, lest, in his curtailment of production, he had over-estimated the effect of the panic. The wholesaler asked himself whether he was prepared to meet the enquiry from dealers whose stocks had been cleared out during the lean year; while to the retailer it was a time of readjustment of his enterprise to the quickening of industry and to the improved ability of the people to buy.

The year's prosperity developed steadily. Crops were good, manufacturers have been well employed, the demand in many lines is taxing the means of production, prices are firm, there is a better feeling throughout the country, the year will close with a record far in advance of 1908.

What of the future? Business men do not hesitate to predict that 1910 will be one of the most prosperous years in the history of the Dominion. The same plans that were applied to the present year may not answer for that which is approaching. The merchant has a clearer vision. It will be a year of clean stocks, of intelligent study of all influences which contribute to efficiency in buying and selling, and a greater appreciation of mutual interests throughout the trade. Men will still be cautious, and in the saneness of their policy will place no handicap upon the development of high merchandising standards.

Many a merchant approaches the end of a year determined to improve upon some part of his working plan. Changes can frequently be made which will not only give him better control of his business, as a whole, but improve some of the departments and please the customer. Where a credit system has multiplied problems, why not try cash? A prosperous year is generally considered an excuse for postponing such a step. It is also the best time to make the change.

DUMPING TAX CONFUSING.

The galvanized and black sheet trade is very much perturbed over the rulings which have been issued from Ottawa recently. In the first place on December 11 instructions were issued by the Government that the dumping clause would be applied on black and galvanized sheets in all sizes up to 36 by 144 inches. The unexpected putting into force of this clause without any preliminary warning was a bomb shell to those who were under big contracts with the States, and complaints were at once made at Ottawa with the results that this week the authorities announced that the enforcement of the dumping clause would be held in temporary abeyance pending further instructions in January next.

The holding of the dumping tax in abeyance is equally unsatisfactory to the metal trade in Canada as it tends to further confuse the situation, preventing buyers from placing orders for delivery in the spring, and which should be specified at the present time. Metals are chiefly bought for future delivery and any changes in the operation of the tariff, so far as it relates to metals, should not be put into force without notice of say six months.

If the dumping clause were to be put into operation on sheets in January, for instance, it would hit importers who had contracted last fall for delivery in January, the advance in prices making the imported stock subject to the dump tax. Again, if a buyer were to specify stocks at present prices for delivery in April, and the market rises to more than 7½ per cent., he will, if the dumping clause is put into force next month, be taxed for every cent. of the difference between to-day's market price and the ruling quotation in the United States in April when the orders are delivered.

At present the "temporary" suspension of the dumping clause is a sword of Damocles hanging over the trade and the government, if they intend giving protection to the sheet steel corporation at Morrisburg, should announce their policy and give the trade due notice. As has already been pointed out sheet metals are, as a rule, ordered at least two to three months before shipment, and the present is the season when spring shipments are specified. Consequently, action at this time would have a very disturbing effect upon the trade.

But why grant protection to an industry which is not able to supply more than a fraction of the country's requirements of galvanized and black sheets? The trade has expressed its opposition to the imposition of a tax on this class of goods and the only call for it has come from the men interested in the industry at Morrisburg.

A GOOD SUGGESTION.

An excellent suggestion was thrown out at the annual meeting of the Dominion Commercial Travelers' Association in Montreal on Saturday. It was not concerning a novel subject, but one which frequently comes up, secures approval, and is forgotten. A member stated that it was most regrettable that there should not be more united action, more co-operation, among the travelers of Canada. In the Dominion Association there are close upon 6,500 men, while in all of Canada the travelers number 20,000. Yet, the various associations were acting individually, and consequently were not accomplishing the many reforms aimed at by each, but comparatively easy of attainment through united action.

He suggested that every two years there be a general meeting of all the associations. This is an excellent idea. It should be carried out. There are innumerable questions of vital interest to individual travelers, and to the various associations, which could be discussed to advantage at such a meeting. Annual gatherings of the various associations are about to be held—let this question be discussed. It is the duty of the president of each association to bring the matter up at the earliest opportunity.

COULDN'T AFFORD ANOTHER $5,000.

It is to be regretted that the Department of Trade and Commerce has decided to let at least another year go by before appointing a separate Trade Commissioner to New Zealand. The matter of cost appears to stand in the way. As the cost is only in the neighborhood of $5,000 a year it is rather extraordinary that it should be used as an excuse by a Government which has so often been characterized as progressive rather than otherwise.

When the present government came into office Canada had one Trade Commissioner. Since then the Trade and Commerce Department has appointed on an average more than one a year, there now being 18 in different parts of the world.

Mr. Larke, the Commissioner at Sydney, Australia, is supposed to look after New Zealand as well, but as that Island is 1,000 miles away from his permanent office it is only once in a year or two that he is able to visit the field.

Parliament has voted $50,000 for a steamship subsidy between Vancouver and New Zealand. Surely the department ought to be able to persuade the House to grant an additional $5,000.

Possibly Sir Richard Cartwright does not like to move as fast as necessity demands that he should. Last year the House voted $85,000 for the Trade Commissioner's service and the estimate this year calls for an additional $10,000, or $95,000 in all. When Sir Richard Cartwright was in opposition he was a stickler for economy. He is evidently still characterized by this quality; in fact to an abnormal extent.

He might just as well have rounded off the sum asked for from Parliament by making it a clear $100,000. The business men of the country would have endorsed him. The Canadian Manufacturers' Association would have even applauded. They want the Commissioner.

Our trade with New Zealand is rather at a stand still. Our exports to that country have never yet totalled $1,000,000, but they have been very close to it. Last year was the best on record when we sold to the Island $996,901 worth of goods. With a live Trade Commissioner on the spot this amount would naturally be increased.

In food stuffs our chief exports to New Zealand are fish and fish products, the canned salmon exported being valued at $102,465. Breadstuffs last year only amounted to $2,128, while the year before the figures were $41,684. We sent material for giving light to the extent of 116,000 lbs. of candles valued at $8,078.

Preferential trade exists between Canada and New Zealand, and an enterprising business man would not under similar circumstances hesitate to add another salesman to his staff in order to bring more business.

Governmental departments can, like individuals, evidently be penny wise and pound foolish.

CHEAP GOODS USED AS BAIT.

From an editorial under the above caption in a recent issue of Domestic Engineering, the following conversation with a hardware dealer is quoted:

"A customer can be brought to see the fallacy of buying cheap goods and that by means of cheap goods, if you only go at it in the right way," he said. "Why, formerly I never had on my shelves a wash boiler that sold for less than $1.50 and from that up. A lady would come in and want to know what I had in wash boilers, I would show her what I had, but when the price was named, she would leave in nine cases out of ten, without purchasing, stating she could get a wash boiler down at the department store for 60 cents. I stood it for a while and after due consideration ordered a half dozen of the cheapest kind of cheap boilers I could buy. Now, when a lady comes in for a wash boiler I am prepared. I go at it this way: I show her the cheapest first, telling her it is the same as they are selling at the department store for 60 cents; that my price is 50 cents; then I go on to explain that it is really not worth taking out of the shop; that it might last for a few weeks only and might not be tight at all; but if she wanted a real good boiler, one that wouldn't rust the clothes and one that I was willing to guarantee in every way as being all right, that I had just what she was looking for; and in about every instance she would take the good boiler; anyway, that half dozen cheap boilers lasted me more than two years.

"It is the same with garden hose. Never used to keep anything that I could sell for less than 15 cents a foot. Customer after customer would come in for hose, but when the price was named they would hie to the department store, where they could buy hose for 5 cents a foot. So I got a quantity of the 5-cent hose and advertised it for 4 cents a foot. They couldn't get around fast enough for that hose. I sold more hose that summer than I had sold in five summers before, but it wasn't the 4-cent kind, mostly the 15-cent. It was just the same as with the wash boilers. A customer would say, 'Here, you are selling hose for 4 cents?' and I would say, 'Why, yes, here it is, but it really isn't much better than if it was made of so much paper; may burst the first time you use it, but is almost sure to do so the second time Same as that stuff they are selling down at the department store for 5 cents. But if you want a hose that will last and keep right, a hose that I can guarantee and stand behind every inch of, I have got the goods.' Result, they almost invariably ordered the 15-cent hose."

The merchant and clerk who knows the goods he sells can adopt this system to advantage, but it is a plan which can only be used where the salesman is prepared to give intelligent answers to questions asked regarding the better grades of goods offered for sale in competition with the cheaper lines. The adoption of this policy will help in building a reputation for quality which will assist greatly in counteracting mail-order competition.

FIRE INSURANCE SUGGESTIONS.

It is good business judgment for a merchant to keep his property insured to the amount of eighty per cent. of its value and it is wise to make careful and true statements of all true conditions; ownership, chattels, lease ground, etc. Taking in a partner or transferring insurance should be at once reported to the company for approval, as well as keeping the company advised as to additional insurance taken.

Report all hazards the property may be exposed to, even after the policy is written.

When a fire occurs report it in writing at once and then look after and protect the property saved from further loss and damage. Many insured persons have suffered loss by neglecting to comply with the requirements of the policy immediately after a fire. Separate the damaged from the undamaged property. Make a careful inventory of both, stating the cost and damage claimed under each article, extended alterations made necessary to the store, prolonged vacancy, sale and storage of hazardous goods, etc. Be sure to get a standard fire insurance policy form when insuring your property. Then utilize your leisure time to inform yourself of the conditions of your policy.

By all means have a fireproof safe. Take an inventory of your stock each year. Keep daily sales account, also book all your purchases. Keep account of expenses and moneys withdrawn from the business. When you do this, you will have no difficulty to establish your loss and to get the same promptly and satisfactorily settled. Outside of the assistance to adjust your fire loss, a full accounting of your business kept in your books will pay you largely and will put you in a position to keep tab on your financial situation and help you make a larger success of your business.

CANADIAN METAL MARKETS

See Itemized Market Quotations on Page 66.

MARKETS IN BRIEF.

Montreal.

Tin—Advance of 1½c.
Wire—Barb and plain twist reduced 5c.
Shells—Universal discount of 35 and 5 on Dominion loaded shells.
Linseed Oil—Advance 2c.
Red Lead—Advance 25c per 100 lbs.

Toronto.

Linseed Oil—Advanced 2c.
Binder Twine—New prices.
Tin—1½c. advance.
Lead—Up 5c. per hundred.
Old Copper and Brass—¼c. lower.

MONTREAL.

December 24.—The great points of interest in the metal market this week have been the strong advance in tin, due to the heavy speculative trading in London, and the holding in abeyance for the time being of the dumping clause on galvanized sheets and black sheets. With regard to the former, there is some perplexity as to the real reason for the heavy buying that has been going on. It has not been on American account, and it is surmised that a continental syndicate, of which rumors have been floating about, are trying to obtain control of the market. In such circumstances it is impossible to say how long the London bull movement is likely to continue. The dumping clause on sheets and plate was imposed last week, but the Government have now recalled the clause for the time being, and thus all parties affected are in a quandary. This is not a business-like way of doing things, and it is naturally interfering with trade. The Government should state definitely what they intend to do.

Trade locally is good for the time of the year, but the volume naturally reflects the season's dullness. There has been some good business in tin, but copper is quiet. Spelter is still selling well. The situation in pig iron and steel is unchanged. European steel billets are having a good sale, now that Canadian furnaces are out of the market. In fact, billets are hard to obtain and the mills generally are anxious as to future requirements. The pig iron and steel markets in the Old Country are showing better strength.

Altogether the markets reflecting the primary conditions are firm, and prospects look very encouraging for next year.

PIG IRON—There is no alteration in the situation. The markets for domestic iron is strong, and furnaces are extremely busy, and likely to remain so. There is some demand ex-store for imported iron, and the prospects are that the consumption will be very heavy before the next month is through. We continue to quote: Domestic $20.50 and $21.50 at foundry; Summerlee, soft, $20.50; Selected, $21; No. 1, $21.50; Middlesboro, $19.50. Figures show that the pig iron production in the States for this year will be fully equal to the record year of 1907, while steel is expected to be much higher. Specifications are still pouring in, and delivery is extremely hard to obtain. Conditions in the Old Country have improved and Cleveland Warrants show a good advance at 50 shillings and tenpence.

TIN—Tin is the prominent metal this week, and with the heavy buying in London has advanced 1½c, and we now quote 35½c for jobbing lots. This is a strong advance, and users of metal are watching the market anxiously. There is little metal in stock, and even though the market is experiencing only one of those periodical bull movements that tin is noted for, users will have to come in on the stiff market to keep things going. This is where hand-to-mouth buying is dangerous. If the market is face to face with a continental syndicate looking to a control of the market, somewhat similar to that in spelter, tin is billed for an indefinite period of stiff prices. For the time being American buying has been quiet. When it comes in the market will be interesting. The whole situation depends upon the real reason for this bull buying movement in London.

COPPER—Copper is unchanged this week at 14½c for jobbing prices. Buying is quiet, and is thus showing the same characteristics as the New York market. There is a good local inquiry. The London market, although fluctuating, has shown, if anything, better strength, while New York holds firmly to figures. Buying generally is said to be on the quiet side, but there is a good tone, in this reflecting the whole aspect of the metal markets.

SPELTER — There is no change this week, and spelter is selling well at $6.25. The market is very strong, as is natural when it is considered that both London and St. Louis still keep firmly to their quotations. The strong demand for galvanized goods should bring the large galvanizing interests into the market again very shortly.

LEAD—The market is unchanged at $3.70 for both imported and domestic. Buying is quiet. The English market is keeping fairly steady, but there is no strong feature to the situation generally.

TORONTO.

December 24.—There is a slight easing off in the volume of business passing this week, and the world's markets seem to be in the same position. The holiday season, the closing of the year and stock taking are responsible for this condition, while in Britain the elections have an added damper on current trading. This does not means that the metal business is at all bad, but only that a lull is on at present, passing business not being up to the November standard, but yet greater than December not only of last year but also of the average December for the past decade. It seems to be a natural thing to expect trading in the metal industry to show somewhat of a slowness coming to the close of the year, and this season is no exception.

Tin and lead show advances. The former is very strong and has shown added strength since the beginning of December. Lead stocks are somewhat lower now and the winter freight rates have tended to boost the prices. Other metals are unchanged in price locally, though iron is easier at furnaces outside Canada; and copper, beyond showing the usual weekly fluctuation, is somewhat easier this week. Old brass lines are down a little.

PIG IRON—While business continues on a large scale the volume of trading at present is not so heavy as last month. Very large inquiries are in the market for the first half of 1910. U. S. iron is at lower prices at the furnaces, but the higher freight rates prevailing just now has tended to keep the Toronto market firm. Quotations, consequently, are unchanged. Summerlee ranges from $23 to $24; and Middlesboro No. 3 and Clarence are up to $22. Glengarnock is $23.50; Jarrow and No. 1 Clarence, $21.75; and Canadian foundry, $22.

TIN—This metal is strong and firmly held. The advance of a week ago is added to by a second advance this week. The Toronto price is now $36, an increase of $1.50 since a week ago. The uses of tin are increasing rapidly but the average yearly increase of production amounts to only 3.9 p.c.

LEAD—This metal also has taken a hitch to itself and advanced. The higher freights on imported lead since the close of navigation in the St. Lawrence are responsible. Asked as to why this did not prevail some time ago the reply was that there were plenty of stocks in sight in Toronto with a light demand existing. This week trading is better and consequently with the lowering of stocks an increase of 5 cents has been added to both imported and domestic grades. The former is now at $3.70 and the latter at $3.60 for hundred pound lots.

COPPER—Small lots continue to be quoted locally at 14c. for casting copper and 14½c. for lake ingots. Larger quantities are at an easier plane. The fluctuation at the beginning of the week was hardly so extensive as during the past several weeks, and the sum total of the situation shows an easier tendency, especially in the primary markets. There is one feature, however, to be taken into consideration and that is the switchmen's strike in the Western States, which is demoralizing mining and smelting operations. The mines of the Boston and Montana Co., the Amalgamated smelter at Great Falls, the Parrott and Moonlight mines, and the East Butte mines and smelters are closed. So far 6,000 men are out of employment.

SHEETS AND PLATES—These two lines are firming up again. The revocation of the dumping clause on galvanized sheets by the Dominion Government has tended to make supplies easier, and with the lower prices which came into force last week buying is much freer. Business now passing is on a large scale.

HARDWARE MARKETS

MONTREAL.

December 24.—Trade has keep up surprisingly well despite it being Christmas week, and jobbers have been busy shipping. This somewhat unusual state of trade is due to the light stocks generally held throughout the country. Lines continually want sorting, with the good demand, and rush orders are therefore necessary. Some lines are showing shortage, and if a heavy call takes place next year, as is more than likely, the trade generally may experience serious hold ups. Light buying on the merchant's part means light buying by the jobbers, and light manufacturing by the makers, and there is the whole situation. For instance, there is now a shortage in skates, while stocks in other lines are showing signs of the steady inroads made upon them. Most of the travelers are now assembled at headquarters, looking over stocks, and taking council for next season's campaign. There is a good tone, and the utmost confidence is felt as to prospects.

A reduction of 5c is announced in barb and plain twist wire, both car lots and small. It was felt that prices were too high for conditions in Canada, despite the tone in the States. The new list of Dominion loaded shells now allows a universal discount of 35 and 5 per cent. This is practically no change.

BUILDERS' HARDWARE—There is still a good movement in builders' hardware, and well assorted lots are going out. The continuance of the consuming demand, owing to the building activity makes sorting up necessary. No change is reported, and we quote: Lock sets (inside) $4 per doz. and up; lock sets (outside) $13.20 and up; common rim locks, $1.10 per doz.; porcelain knobs, $1.10 per doz.; sash cords, 32½c to 33c.

WINTER LINES—Despite this being Christmas week a very good sorting up trade has been done, and it is evident that with stocks so low dealers have constantly to sort up. Weather strip, sleigh bells, tools, lanterns and burners have gone out well. Household requisites, such as carpet sweepers, wringers, bread mixers, brooms, mops, etc., have also had a good call. The northwest continues to buy heavily assorted lots of enamelware. Tinware has showed good movement.

CUTLERY AND SILVERWARE—There has been some rush orders in for cutlery and silverware. The local demand keeps up, as New Year's day is a great gift day to the French-Canadian.

SPORTING GOODS—The shortage in skates is the principal feature of the sporting goods situation. There has been a tremendous run on these lines, owing to the short stocks with which the dealers entered the season. Hockey sticks are also showing good strength. Snowshoes and toboggans would be helped by the fall of more snow.

MINERS' SUPPLIES — There is a quiet call, and the market is without feature. We quote: Miners' picks, 16½c a pound; prospectors, hammers, 16½c; pick handles, $1.85 a dozen; drilling hammers, 6c a pound; crowbars, 3½; drill steel, 8c.

BOLTS AND NUTS—The market is without change. The demand is good for the time of the year. We quote: Discounts on carriage bolts, ⅜ and smaller, 70; machine bolts, ⅜ and less, 60, 10 and 10; coach screws, 75: stove bolts, 80 and 7½.

LUMBERMEN'S SUPPLIES—Orders for assorted lots are coming in well. The market is unchanged and we quote: Cant hooks, $12 a dozen and up; axes, $6.50 a dozen and up; axe handles, $1.15 and up; cross-cut saws (inferior) 25c per foot and up, better grades, 43c per foot and up; axe wedges, 25c a dozen and up.

WIRE—A reduction of 5c is announced in barb and plain twist wire both for car lots and small. It was felt that previous prices were too high to command the best business. We quote: Barb wire, car lots, mixed, $2.45; small lots, $2.50; plain twist, car lots, $2.75; small, $2.80. Galvanized wire, No. 9, $2.25 in straight and mixed car lots, and $2.30 small lots, f.o.b. Montreal. Coiled spring fencing, $2.30, straight and mixed car lots, and $2.35 small lots. Plain wire, bright, annealed and annealed and oiled, $2.35 base. Staples, bright, $2.60; galvanized, $2.85.

TORONTO.

December 24. — Despite this being Christmas week with its expected attendant easing off of buying, the hardware trade seems to have taken renewed life. The volume of business passing this week is probably greater than any of the previous four weeks. Not only are some belated Christmas goods going out in "hurry-up" orders but there is a general call for varied lines, seasonable and unseasonable. The volume of goods ordered, too, is somewhat surprising, and travelers say outside hardwaremen are stocking up more liberally than since the depression.

Of course, wantable winter lines have the call, snow shovels, scoops, sleds, stove pipes, galvanized ware, building paper, sleigh bells, horse blankets, stable lanterns and skates, are some articles taken at random, but figuring in the majority of orders received.

As yet there are no price changes. Shells of all kinds, loaded and unloaded, black and smokeless, as noted in last week's market report, have been newly listed and a uniform discount of 35 and 5 brings the U. S. and Canadian prices more in harmony. Smokeless shells show an advance of 3c a hundred, but black remain unchanged.

New binder twin prices are announced for 1910. These show somewhat of an advance, though as yet it is not great. Prices are held to have been low last summer, and since the opening of December, various guesses have been made as to the new lists. Sisal, which comes from Mexico, Yucatan, and other Central American countries, is short some 25,000 tons this year, and what crop was available is said to have been gobbled up by some of the larger U. S. concerns. More sisal, proportionately, is used across the border in twine than is the case in Canada. Here there is a greater proportion of manila used. But the situation will be the same in both countries, for the U. S. will use more manila this year to make up for the sisal deficiency, with a consequent shortening of Canada's available manila supply. This is said to be the condition today, and is the cause of the firmer prices. The new price of pure sisal is 7½ cents a pound (500 feet lengths); pure manila is 9 cents (650 feet). Extra (500 feet) and superior (600 feet) grades of manila are at 7¾c and 8¼c a pound. These prices hold good both in Canada and the U. S. for the makes of both countries.

HOLIDAY GOODS—Some few Christmas goods have gone out in "hurry-up" orders this week, but ten days ago saw the break-up of the rush. Presentation goods were confined chiefly to sleds, skates and children's lines.

WINTER GOODS—The present week saw some spendid business in this line. Shovels for snow, pitchforks, stable goods and shelf hardware have been moving in fine volume all week. Meat and food choppers have been going out well.

BUILDERS' HARDWARE—This line was eased off considerably during the past ten days, ever since the beginning of the cold spell spell, and unless there is a protracted moderation in the weather, it is likely that new buildings not advanced nearly to completion will stand until spring. Lock sets are more plentiful in variety and stock than for months.

SPORTING GOODS — Skates and hockey sticks and supplies are the principal sporting articles moving this week. Sleds, too, are good. Toboggans and bobsleighs are not going so fast as a couple of weeks ago.

HEAVY GOODS—There is a letting-up in this class of hardware. Wire and cut nails are in moderate demand. Screws are rather light in movement. Pipe and rods are fairly steady.

WIRE — Prices for 1910 are out. These are good on present booking up to May next, though they may not hold until that date. Barbed wire is $2.50, Toronto, base price; plain twist fencing, $2.80; and galvanized wire, Nos. 4 and 5, $2.80. Coiled spring wire is $2.35. Montreal and Pittsburg prices have been brought more in conformity for Ontario points; as also have Cleveland prices. There is a 20 per cent. duty on galvanized wire and 25 per cent. on plain twist.

HARDWARE TRADE GOSSIP

Ontario.

R. Hadden, hardware merchant, Picton, died last Sunday morning, after a lingering illness.

A. & H. Wideman are now installed in their new hardware store on Main Street, Markham.

Leroy J. Chown, of the Chown Hardware Co., Edmonton, Alta., is visiting his brothers in Belleville.

T. Leach, superintendent of the Dominion Wire Mills, at Montreal, was in Toronto a few days this week.

Charles Morrison, of the James Morrison Brass Mfg. Co., Toronto, will spend Christmas and New Year's in Chicago.

The Imperial Glove Co., manufacturer's of canvas gloves and mittens, Hamilton, have moved into new factory premises at 12 to 16 Main Street, Hamilton.

R. F. Johnstone, hardware merchant, Acton, has been confined to his bed for the past couple of weeks, with an attack of pneumonia. He is slowly improving now.

C. L. Moffat, Winnipeg manager of the Moffat Stove Co.'s business in Western Canada, returned to the west a week ago, after a short visit at his old home at Weston.

F. C. Surbeck, manager of Benjamin Moore & Co., West Toronto, is attending a meeting of the managers of the various Moore Co. plants at the Brooklyn headquarters, this week.

W. Thompson, of the staff of the McClary Mfg. Co., Hamilton, is being transferred to London, as a special stove salesman, his place at Hamilton being filled by the removal of George Moll from London to Hamilton.

James & Reid, Perth, have purchased the premises and hardware stock of the B. Warren estate at Perth, and will enlarge the building to twice its present size, making it one of the largest and most complete hardware stores in the Ottawa valley.

A. E. Campbell, the St. Thomas hardwareman, owing to increased business is enlarging his premises on Ross Street, by building a two-storey addition, the whole width of his store at the rear. The second storey of the new store will be used as a tin shop.

Chas. J. Caley, of New Britain, Conn., lately appointed manager of the Peterboro Lock Mfg. Co., has assumed the duties of his office. It is the intention of the company to greatly enlarge the facilities for making locks, so as to double the output.

W. T. Fleming, Belleville, traveler for the Martin-Senour Co., Montreal, was presented with a gold watch by his firm a few days ago, for being a top-notcher having sold the first full car-load of Martin-Senour products to a retail hardware man in Ontario.

F. P. Latsch, who conducted the hardware business in the Zryd block, Galt, for the past two years, has disposed of his business to Reginald Gordon, of Guelph. Mr. Gordon served for a number of years with G. B. Morris, and R. Richardson, of Guelph. Mr. Latsch will remain for a few months and assist Mr. Gordon, after which it is his intention to go west.

A. M. Smith, who has been acting manager of the Montreal branch of the McClary Mfg. Co., will after January 1 resume his duties as assistant to M. F. Irwin, sales manager, London. Mr. Berube will be assistant to J. C. Newman, the new manager of the Montreal office, and Alex Mackenzie, formerly at the St. John office has been transferred to the Montreal staff.

Quebec.

James Ballantyne, Montreal, has returned from a trip to the Pacific Coast.

A curator has been appointed for the tinsmith business of J. L. W. Dessert, St. Guillaume.

E. Barry, Winnipeg manager of the Canada Paint Co., Montreal, is on a visit to headquarters.

J. E. Aldred, president of the Shawinigan Water & Power Co., has been on a visit to New York.

F. Hankin, manufacturers' agent, Montreal, was married last week to Miss M. Blachford, of Montreal. The honeymoon was spent in the States.

F. W. Bailey, manager of the Magnolia Co., of Canada, Montreal, is on a trip to New York, where he will visit the headquarters of the Magnolia Metal Co.

The sporting goods store of T. W. Boyd & Son, Montreal, was broken into last week and a considerable quantity of skates, and hockey accessories stolen.

C. H. MacMillan, formerly in the employ of the Dominion Iron & Steel Co., Sydney, N.S., has been appointed superintendent of open hearth department, No. 2 of the Bethlehem Steel Co., South Bethlehem, Pa.

William Bayliss, Birmingham, Eng., makers of solid drawn brass cased tubes, stair rods and brass cased rodding, seamless steel tubes, brazed iron tubes, square brass tubes and brass mouldings, are now represented in Canada by Alex. Gibb, Montreal. William Bayliss are contractors to the British War Department.

Extensive improvements have been made to the office floor of the Thos. Davidson Mfg. Co., Montreal. Extra space has been added, and with partitions taken down the whole floor presents a bright and cheerful appearance. Owing to the great press of business, the company have put in their own private telegraph wire with an operator as a member of the staff.

A BOER WAR REMINISCENCE.

Mr. Burne-Murdoch, who has been in Canada fitting up a sherardizing plant—the latest process for galvanizing zinc on iron—had an exciting experience the other day in the King Edward Hotel, Toronto, where he was staying. Mr. Burne-Murdoch went to South Africa in a volunteer cavalry corps from India, and was severely wounded. He was struck by a shell and lay insensible in a hospital for a month. As he was walking through the corridor of the King Edward, a man suddenly stopped in front of him, turned pale, put his hand to his head and sank on the lounge in front of him. Mr. Burne-Murdoch thought the man had fainted, and went forward to try to brace him up. Finally the man came to enough to say "Is your name Burne-Murdoch! Are you really alive?" After he had thoroughly braced up, he explained that he was in Burne-Murdoch's troop and the last time he saw him was lying on the field in Africa, with a terrific gash on his head, covered with blood and apparently dead. He turned him over with his foot and said "Poor fellow," jumped on his horse and rode off, leaving him for dead. Mr. Burne-Murdoch related the rest of the story of how he lay in the hospital for months, part of his skull being cut out, but finally recovered and is now living in the United States.

The sherardizing process is the third and latest method of galvanizing, and is the invention of J. Sherard Cowper, an Englishman. After whom it is named. While this process was first used in England, it is being used more extensively in the United States, at the present time. The oldest method of galvanizing is called the "hot" process. The article to be galvanized was first put in an acid bath, then allowed to dry, and finally dipped in the melted zinc. It was found that in the dipping of small articles like tacks, keys, etc., these became an adhered mass at the bottom of the kettle, and some time was consumed in separating them.

Then came the "electro" process whereby these smaller articles were dipped in a revolving kettle, which prevented, to a great extent, the articles adhering to one another. In the sherardizing process a long cylinder is used instead of the kettle. This revolves continuously; the zinc is applied in powder form, and the article is baked in an oven. The advantages claimed for this process are that it is economical in fuel, material and labor; and wire and chain may now be galvanized by this process, thus making them rust proof.

A large financial concern has taken over the North Mildand Railway scheme, and will finance it. It is expected that construction operations will commence in the spring. The line will run north from London, through Ballymote to Lucan, thence to St. Mary's, and from St. Mary's to Stratford.

Hardware Trade in the Mother Country

Exports to Canada are Improving—Why Railway Orders are so Few—Effect of the United States Tariff.

Special Correspondence to Hardware & Metal.

Sheffield, Eng., December 6.—The hardware, iron and steel trades of Great Britain are in a fairly satisfactory state. It was expected that a return to better times would have been experienced before this, but the day of improvement has been from time to time postponed. Now it is thought that nothing in the shape of a big move forward will be made before the New Year.

There have been one or two false starts; when trade in a few branches brisked up, it was thought that other branches would soon follow suit and preparations were made for it. But it did not come about. The branches of trade which have done very well in spite of the continued depression generally are those devoted to the making of specialties. For example, all departments which cater for admiralty work have had a good run, for armour, projectiles, guns, gun mountings, etc., but now there is a lull here, and the general departments are getting a little better off.

What buoys the British manufacturer up is the activity in the United States and Canada, for we have always found that a boom in America means a boom here before very long. Up to the present we have not felt it. Hope has not yet been abandoned, and when the political atmosphere becomes more settled after the general election there is no doubt that we shall be in for a long run of prosperity.

The false starts have had this effect: huge stocks of raw and semi-manufactured material have been bought in anticipation of a boom, and when trade really gets a good run the profits will be all the bigger because of the advantageous terms at which raw and semi-manufactured material has been bought.

One big drawback at the present juncture is that production is at the level when working costs are the same as if full pressure were being exerted. In many instances—as for example, bar iron—production is about 80 per cent. of the capacity of the works, and working costs are no lower than they would be if the production was 100 per cent.

It will thus be seen that there is not much further to go before profits will be of a satisfactory kind.

Parsimonious Railways.

Here we have been reading, rather enviously, of the extension and development of Canadian railways with the consequent accession of orders to the makers of railway material.

There has not been such a slack period in railway material departments here as there has been for many months now. If the costs of upkeep and the profits were compared it would be found that the orders received have not balanced the establishment charges and other expenses. Huge departments have been virtually idle owing to the parsimony of the British railway companies.

About fifteen years ago each railway—many cover the same districts—were trying to cut the others out. Many thousands of pounds were spent on rolling stock; locomotives of new design were introduced at enormous expenses; and lines were doubled so that goods and passenger traffic might get a more expeditious run.

Now, counsels have been held and the keen competitors of a short time ago are working hand in hand. It is safe to say that there is not now one railway in Great Britain which has not a working agreement with another. Economy is now the order of the day. Owing to the state of trade it has been necessary to keep down expenses, and the best way has been proved to be: amiable relations with old-time competitors. Not only has this led to considerable reductions of staff, but to diminished orders for rolling stock and material. The policy of economy has been pursued so far that it is felt renewals of tracks, of wagons, of carriages, of engines, cannot now be delayed much longer. But when the orders are placed it will be found that they have arrived too late to make the railway departments of the big steel works at all profitable for the year that is just closing.

Side by side with this knowledge is the fact that Sheffield and other manufacturers are losing orders for railway material because of German competition. The old contention that nothing but acid steel would do has been swept away, and the German has not lost the opportunity to sell the cheaper basic steel goods. It remains to be seen whether they will give satisfaction equal to that secured by the acid qualities.

United States Tariff.

There has been ample opportunity of judging whether the new tariff will have any serious effect upon the steel and iron trade with Sheffield.

In the case of high speed and other special steels the demand from America has not been reduced at all; in fact, Sheffield manufacturers are sending more to the States than formerly. In twist drills, too, the trade has increased.

Of course, it may transpire that the impetus is due more particularly to the boom in American trade than to the ineffectiveness of the higher tariff to keep out the goods.

Grinding Regulations.

The death rate amongst workers in cutlery, tool, iron and steel work where the grinding of metals takes place, is so very high that Government action has been taken, and Home Office regulations have been drafted to control this dangerous branch of trade. The main cause of death amongst grinders is consumption of the lungs, caused, it is said, by the metal dust going up the nostrils or down the throat.

The rule enforcing cleanliness amongst the men will come into force on December 1. The employers will be allowed seven months in which to carry out the necessary alterations of their plant and workshops.

Exports Increasing.

A gratifying feature of trade is that exports are on the upgrade, and Canada is one of the markets with which the biggest improvement has taken place.

The latest Board of Trade returns issued at the time of writing are those for October. In the hardware section it is shown that in that month Canada took goods of the value of £7,789, compared with £4,765 in October, 1908, and £4,416 in October, 1907. For the ten months of the year the total os £53,337, considerably ahead of the corresponding total of 1908 which reached $33,877 and over £4,000 in front of the corresponding total in 1907 which reached £49,216.

Cutlery was not quite so satisfactory, because the total is still behind 1907. In October last Canada took £7,576, well ahead of the £4,504 total of October, 1908, but behind the £12,814 total of October, 1907. During the ten months of the year Canada took £72,210 compared with £58,411 in the corresponding period of 1908, and £92,930 in the corresponding period of 1907.

Unwrought tin still shows a decline. In October, 1907, Canada took 40 tons; in October, 1908, 56 tons; and in October, 1909, only 39 tons. On the year so far there is an increase. In the first ten months of 1907, Canada took 531 tons; in the corresponding period of 1908 it fell to 505; now in the ten months of 1909 it has recovered to 722 tons.

In pig lead, and manufactures of pig lead, Canada took 384 tons in October, 1907; 407 tons in October, 1908; and 485 tons in October, 1909. Taking the ten months, 1907 is credited with 4,488 tons; 1908, 3,148 tons; and 1909, 3,693 tons.

The steel trade with the Dominion is improving. In October, 1907, the total of steel bars, angles, rods, etc., taken from Great Britain was 3,052 tons: in October, 1908, 4,233 tons; and in October, 1909, 4,153 tons. In the first ten months of 1907 the total was 22,777 tons; in the corresponding period of 1908, 15,817 tons; and in the first ten months of this year the total reached 17,750 tons.

Business Methods of Canadian Hardwaremen

General Delivery Systems at Simcoe and Leamington—Kingston Merchant's Record for Promptness—A Chatham Grocer's Plan for Distributing Calendars—Window Displays incomplete Without Display Cards and Price Tickets.

ALWAYS ON TIME.

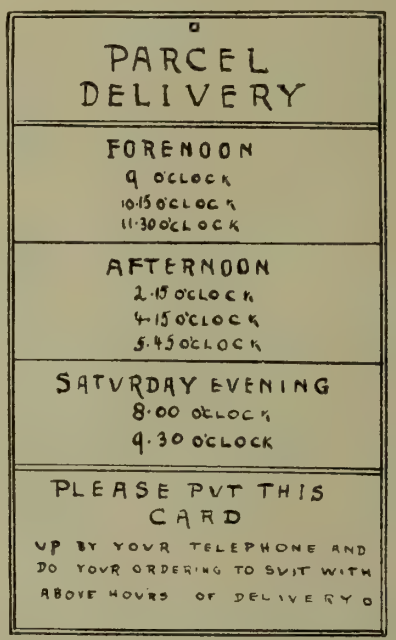
Kingston, Dec. 21.—Your correspondent was talking with an old resident of the city, the other day, and the conversation drifted onto the different stores in the city, and the way the proprietors carried on their business. Incidentally, a warm tribute was paid to a local hardwareman, and in this way. He pointed out that Mr. ——— was making a great success in his business, and that he certainly deserved all the success, as he was a man who looked strictly after his own business, was always "on time," that is, he was always down at his store at the time for opening, and always stayed right with it, unless called away by something which was most urgent. "Do you know," added the old resident, "I believe that is the only way to make a success out of your business. This man can be found in his store any morning at 7 o'clock, in time to give orders to his men, for the day's work."

If the merchant himself is not punctual, how can he expect his employees to work their hardest. It would appear as if there was a great deal of good in what Kingston's old resident had to say about the merchant always being "on time."

E. G. B.

LEAMINGTON'S CENTRAL DELIVERY.

Leamington, Dec. 20.—Though the fact is not generally known, Leamington has for upwards of a decade possessed a general central delivery system in successful operation, the proprietor, Charles Scratch, having started in business April 17, 1899, with one rig. At the outset he delivered for only two stores, but his field of operation extended till recently he delivered for all the business men in town except two or three, and has several men working under him and constantly busy.



Mr. Scratch's rigs started on their rounds at 8 a.m., and often kept at it till 11 o'clock at night. Each of the merchants paid a definite sum weekly. The scheme has been very successful and though the number of articles delivered has run far up into the tens of thousands, very few errors have been made. Mr. Scratch has just recently disposed of the business to William Kewen, Blenheim, and will probably leave for the west.

E. P.

GENERAL DELIVERY SYSTEM.

Simcoe, Dec. 20.—The general parcel delivery system, after having been in operation in Simcoe for two years, has proven to be satisfactory in every respect, taking into consideration both the merchant's and his customers' interests.

Previous to having this system, there were nine delivery wagons doing the work for eleven stores, one of them working for dry goods, liquor and departmental stores. The Simcoe merchants began to feel that it was useless to have so many wagons over the same ground, so the present method for doing the work was considered. The business to-day consists of four wagons, with an extra wagon for busy days. The town is divided into four sections, and the drivers have a time table, which they go by. The merchant, when first accepting this system found that he had to work on time as well as the drivers. Previously he could get his orders ready when he liked, but now he must have them ready at the hour of delivery. Needless to say, the merchants are saving time and money, and are free from all the worries that usually accompany the delivering of goods. The population of Simcoe is about 8,000.

Copy of Card Simcoe Merchants Have Distributed in Homes of Consumers.

B. T.

INCOMPLETE WINDOW DISPLAYS.

St. Thomas, Dec. 23.—Not a few merchants who go to exceptional trouble in providing attractive window displays fail to accomplish the fullest possible results, owing to their neglect to make judicious use of price tickets and show cards. The attractive, well worded show card or the neat, distinct price ticket enhances the appearance of any show window. Experience shows that it also adds immensely to the "results" which the show window is designed to bring. Without price tickets or show cards to drive home the point, a window display is like an unfinished argument. The premises have been set forth, but the designer has failed to draw his conclusions.

An artistically designed show window takes a great deal of time and labor, and the merchant owes it to himself to secure in return the utmost possible results. To do this he must make his window display in effect a complete and logical argument to the passer-by, on the subject of buying the goods displayed—and this cannot be done unless he clinches his argument by means of prices. The cards may be subdued so that they will not mar the general effect by undue obtrusiveness—but they should be there, for the benefit of the passer-by who is tempted to take a second look.

W. E. P.

CHILDREN RECEIVE CONSIDERATION.

St. Johns, Que., Dec. 20.—"In my store children receive fully as much consideration as their parents," said R. Goold, one of the progressive local retailers. "I figure this way: If a child is given some inferior article, or is made to wait until everyone else is served, though they came in after she did, you are sure to hear from it sooner or later. In all probability you will hear that her mother is trading elsewhere."

CHRISTMAS CALENDARS.

Chatham, Dec. 21.—Following a recent resolution of the local Merchants' Association, very few of the Chatham merchants this year are handing out calendars. The experience of merchants with children clamoring for calendars, and the fact that the latter seemed in most cases to get into the wrong hands, has in the past led to much dissatisfaction, and it was largely such difficulties that has lead to a resolution to do away with calendars entirely for the present year.

Of the few merchants who are still making use of them, one, John McConnell, a grocer, is adopting a decided reform, calculated to eliminate some of the worse features in connection with calendar giving. With reference to his 1910 calendar, Mr. McConnell makes the following announcement:—

"Our regular customers will receive one (calendar) free. Any others desiring one can have one by purchasing $3 worth of groceries before Christmas or until all are gone. You do not have to buy the goods all at once. Every time you come, you will receive a receipt for money paid. When you have $3 worth of receipts bring them in and receive a calendar."

HALIFAX.

December 20. — Hardwaremen from the different parts of the Maritime Provinces gathered in Halifax this week to attend a meeting of the executive of the Maritime Hardware Association. The meeting was held in the Halifax Hotel. The association was formed three years ago, and its principal object is to bring about a closer relationship of members of the trade.

W. S. Fisher, St. John, the president, was among the number present at the meeting. In an interview Mr. Fisher spoke of the marked improvements in Halifax during the past few years. "With your new streets, magnificent harbor and other improvements in Halifax, you have a city to be proud of."

Mr. Fisher is a firm believer in the Maritime Provinces, and is optimistic as to their future. He advises the young men to remain at home and share in the good times of the near future. He also spoke in appreciative terms of the progress made by Nova Scotia in the way of technical education. Mr. Fisher stated that nothing of special importance transpired at the meeting.

The Libby gold mine and water power property at North Brookfield, is reported to be under option to a syndicate of Minneapolis capitalists, who propose to at once develop the water power and electrify all the machinery, both on the surface and underground. This immense plant has been standing idle for about five years. When working to its full capacity the mines employed upwards of 150 hands, and large sums were disbursed regularly in wages. The operation of this plant will prove a boon in the counties of Queen's and Lunenburg.

E. R. Faribault, of the Canadian Geological Survey, arrived in Halifax today, from a visit to the Thompson mine at Moose river. He was sent there to inspect the Tungston deposits at that place, and he reports that there are good signs of the precious metal in fourteen of the veins that he has examined. Tungston is a rare and valuable metal, which is used principally in hardening steel. The world's product of it is very small, and it worth about $600 per ton. Should it turn out to be in very large quantities it will mean much for this province.

J.H.

OTTAWA.

December 20.—Christmas buying is brisk this week, and the hardware stores are receiving their share of the holiday rush. There is a pronounced showing of artistic, yet useful hardware, and there seems to be a growing favor in this direction in the matter of gift giving.

McFarlane & Douglas have purchased the property in the rear of their present sheet metal factory, and plans are in preparation for an extension to the building. The new addition will be of brick and will have a frontage of 120 feet on Laurier Avenue West. The present building has a 135-foot frontage on Slater Street. This new extension will give premises right through from Slater to Laurier Avenue.

Building is waning, there being only four permits issued at the City Hall during the last week, amounting to $11,500.

The new fuel testing plant of the Department of Mines, has been completed, and it only remains to instal the machinery. The first use which will be made of the building will be to demonstrate that peat is an ideal fuel for the production of power gas. Already 70 tons of peat have been delivered at the building.

G.E.M.H.

BRANTFORD.

December 21.—Local hardware dealers report splendid trade for last week. Saturday especially being a hummer, many breaking all previous season's in the amount of cash sales. All the stores will remain open every evening this week. Saturday's market was a large one, and no doubt to a great extent influenced the Christmas buying, but Thursday will be the big Christmas market, and a smashing business is expected. In speaking to President Henry Yeigh, of the Telephone City stoves, he remarked, "The past week has more than come up to our expectations, but we cannot distinguish between actual Christmas buying, and the purchases through our 'closing out' sale. However, before Christmas comes, we expect much larger trade. The local factories have all run full time this year, and a number are running over-time and double shifts, so that with pockets full, money flows easier." All other hardware dealers report the same.

Turnbull & Cutcliffe show a well arranged display of art copper and brass ware in their north window, for which there has been a good demand locally this year.

A. Ballantyne, in his cutlery, has shown a true appreciation of the value of light effects in his north window, the background being of black velvet, which shows up the display of cutlery splendidly.

In the new gas field at Onondago township, but a few miles south of here, seven wells have been struck, from six of which gas flows, the wells being 600 feet deep. Should the two months' test to be applied prove them to be payable ones, Brantford will be looked upon as the principal market, and it may have a tendency to reduce the rates now in force for natural gas.

The Ontario Iron & Steel Co., Welland, reports business as booming, causing additions to the present plant to be absolutely necessary. Contracts have been let for an addition, 75 by 177 feet, of structural steel. It will require 100 additional men to man the plant.

The Page-Hersey works, Welland, will commence operations in February next. They have let the contract to David Dick, Welland, for a coal shed to accommodate 200 cars of coal, for use in the gas producing plant.

Local merchants are following with much interest, radial railway extensions in this part of the province. The Grand Valley Railway Co., the president of the road, Murray A. Verner, says, will extend through to Woodstock and London, and will have connections with Port Stanley, Ontario, and lake ports across Lake Erie. A road to Port Dover will also be commenced next year, a despatch states, giving Brantford connection at short distance with the lake, from which many advantages are expected to accrue to Brantford from the district reached, the people, for the most part, having Brantford as the nearest large centre.

A.W.

CHATHAM.

December 22. — Chatham's new stove company was formally organized on Friday evening, when officers were elected. The concern will be known as the Modern Malleable Range Co., Ltd., and is capitalized at $40,000. The officers are: President, W. R. Landon, Chatham; Vice-president and General Manager, Fred Reissner, Leamington; Secretary-treasurer, R. Ross, Leamington; Factory the Reissner Bros'., stove works at Leamington; Directors, Robert Gray, Manson Campbell and John G. Kerr, Chatham. The company takes over the business of the Reissner Bros., stove works at Leamington, having bought that concern's machinery, and will manufacture the "Modern" steel range hitherto manufactured by the Reissner concern. The factory will be situated on St. George Street, immediately opposite the Gananoque Spring & Axle Co.'s plant. The management will remain largely in the hands of Louis and Fred Reissner. They hope to be turning out stoves from the Chatham factory in the course of a couple of months.

The scale of fees for auctioneers on the Chatham market has been increased from $15 to $50. Considerable complaint has been made from dealers in tinware, kitchen utensils, etc., that the auctioneers provided them with unfair competition by auctioning off, not only

second hand goods, but also new "shoddy" stuff, and the retailers have on several occasions urged that auctioneers, if they cannot be prevented from competing in this way, be assessed a license fee somewhat nearer the amount of taxes paid by the average merchant. The increase in the license fee is a step in this direction.

C. A. Willetts & Co., hardwaremen, of Leamington, have moved to the store formerly occupied by H. Lendon. Quite a number of improvements have been made to the premises.

W.E.P.

WINNIPEG.

December 22.—The Winnipeg wholesale hardware curling league has organized again for the season. H. F. Moulden, whose cup is to be competed for was unanimously elected patron of the league. J. M. Lynch (Miller-Morse), was elected president and J. Feir (George D. Woods), secretary. The schedule is open, and on Saturday last the Marshall-Wells house defeated the Ashdown bunch, scoring 15 to 9 points. The next fight is between the Merrick-Anderson and the James Robertson teams.

George A. Clare, M.P., head of the firm of Clare Bros., stove manufacturers, Preston, Ont., was in the city last week, and acting in conjunction with his local agents, Clare & Brockhest, they secured a site for a large warehouse to be erected here in the near future.

H. T. Campbell is managing the hardware business recently owned by Stephen Drewe, which has passed into the hands of liquidators. Mr. Drewe is at present in Toronto, and it is expected that he will return to the west as a representative of some eastern wholesale house.

As a result of some technical changes in the public school curriculum, the children are purchasing workmen's tool sets. Although this fact has become known, only one hardware dealer has taken any steps to land this particular trade. Last week this merchant sold over one hundred sets.

A. E. Hinds, recently in the employ of the Munro Fence Co., and at present a manufacturers' agent, in Winnipeg, is in Portage la Prairie superintending the liquidation of the London Fence Co., of that city. Mr. Hinds is western agent for the Delta Tile Co., the Belleville Brass & Steel Goods Co., and the Morgan Spring Co.

A. P. Macdonald, of the Macdonald & Fleming Hardware Co., has gone to Vancouver in seach of better health. It is improbable that he will return before the spring months.

J. P. Wing, formerly a hardware clerk in Niagara Falls, Parry Sound and Sudbury, and now manager of the Scott Hardware Co., of Scott, Sask., was in the city last week on his way to Ontario to spend the vacation at various points.

Jas. Scroggie and Roy Campbell, of the Macdonald & Fleming Hardware Co. are severing their connection with that firm and will proceed together to Chicago about the new year.

C. A. B. Whiting expects to occupy his new premises in Fort Rouge about Feb. 1. The severe weather has detained building operations, making it impossible for him to have the advantage of the new store for the holiday trade. Mr. Whiting leaves the city on December 22 for a two weeks' vacation in Ontario.

The Western Iron Works Co. are completing the oramental work on the new Canada Permanent building in this city, and have commenced the erection of elaborate ornamental work on the new McArthur building. They are also filling many important contracts in Calgary and Edmonton. C. A. Baskerville, a local hardware merchant, was last year the president of the company, but resigned to become a director, owing to the pressure of his store duties.

L.C.H.

CALGARY.

Dec. 16.—A representative of Marshall-Wells company has been in Calgary for the past few days, and has invested somewhat extensively in real estate. On one piece of property the company will erect a wholesale house.

James Higgins, Calgary, has invented and patented a substance for covering steam pipes and boilers that may make him a wealthy man. It is a substitute for asbestos, and though better for the purpose, costs only one-third as much. This substance is not affected by electricity and is tougher and will stand more abuse, these being advantages it has over asbestos. Mr. Higgins has put this substance on the pipes at the C. P.R. depot, and over the boilers in the C.P.R. power house, and the engineer in charge says that since it has been done there has been a saving of 25 p.c. on fuel. Mr. Higgins says he has sold the use of the patent in England for 200 pounds sterling.

A. R. A.

PRINCE ALBERT, SASK.

December 18.—New interest is rapidly being awakened in Prince Albert, now that the advent of other railroads is regarded as assured. Track laying gangs are at work on the Shellbrook extension of the C. N. R., and if promises may be relied upon, we may expect to have communication with the new town by January 1. A distance of thirty miles will thus be served by the new road, and easy access to the city will be given the bountiful crops of wheat and other grains produced this and former seasons, in what is proving to be one of the most fertile spots in the west. The new line will also carry large quantities of fuel and railway ties, and as soon as the steel can be laid to the new town of "Cowan," the site of the Big River Lumber Co.'s new mill, an additional seventy odd miles of country will be served with transportation facilities.

What the establishment of another large lumber industry at the city's doors will mean to the trade of Prince Albert, can be imagined, when we remember that the output will be 50 millions of feet and will give employment to well nigh a thousand men whose supplies as well as the output of the business will pass through this point. At present the shipment of lumber from Prince Albert approximates 60 million feet annually. With the establishment of the new mill, the shipment will be virtually doubled, and the pay roll from this source alone will do much toward making impossible a repetition of the financial depression felt recently so keenly by many towns and cities in the west, by Prince Albert last of all.

Agnew Bros., hardware merchants, since Prince Albert's early days, have built a very neat block on Tenth Street.

B.W.W.

VANCOUVER.

December 18.—General conditions on the Pacific Coast are good. Hardware stores have nothing to complain of, for with building active, and many people coming in there is a steady demand for general stock. The iron working business is also in good shape. This is helped out by the satisfactory conditions prevailing in the lumber and logging industries. Although naturally at this time of year, the shingle manufacturing is quiet, in the lumber part, the mills have all been cutting to capacity, and even at that stocks are light. The annual overhauling will be done in this and next month, but the shut-down will not

Assignee's Sale

of a valuable Hardware Stock of the Batty Hardware Company, at Norwich.

Tenders will be received by the undersigned Assignee for the purchase of the Stock in Trade, fixtures, etc., of the Batty Hardware Co., of Norwich, Ont., as follows :

Stock of Hardware, Tinware, Stoves, Vehicles, etc., as per stock list...$15,065
Also store fixtures, boxing, shelving, tinshop tools, horse and storehouse 2,897

Total value $17,962

This is a well selected and up to date stock. The present stores can probably be leased on favorable terms. The stand is most desirable and central and the business has been established 25 years.

Tenders at a rate on the dollar will be received by the assignee up to the 15th day of January next. Stock will be open for inspection at the office of the Assignee.

Terms of sale, one third cash and the balance in 2, 4 and 6 months on approved security, no tender necessarily accepted. Dated at Norwich this 16th day of Dec., 1909.

J. D. HOGARTH,
Assignee.

John Rowe, Norwich,
Solicitor for the Estate.

Condensed or "Want" Advertisements

Those who wish to sell or buy businesses or stocks, obtain competent help, connect with satisfactory positions or secure aid in starting new enterprises should not fail to use the Want Ad. A YOUNG MAN with five years' experience in retail hardware desires position. Good stock keeper and window dresser. Can furnish best of references. Apply Box 930, HARDWARE AND METAL, Toronto. (52)

be any longer than is necessary. In logging, there was surplus in the fall, after a record cut, but there is none to speak of now, and prices are as high as $10, and stiff at that. The Paterson Timber Co. has eight million feet of logs on hand, but they will be held, and by so doing the company expects to clear at least $3 a thousand more for them, than if the logs had been sold when put into the water. There is also steady expansion in shipping business, in fact in all those lines of industry which bring good trade to the hardwaremen, there is no depression of any sort.

To preclude any possibility of being put out of business by an accident like that which occurred in connection with the power plant at Winnipeg recently, the B.C. Electric Railway Co. will instal a steam auxiliary plant. The contract for this was let this week to C. E. Moore & Co., San Francisco, the price being approximately $250,000. This will be used on any occasion when the big water plant may be out of commission. This is only one of the many improvements which the company is making in connection with its gas and electric systems in New Westminster, Vancouver and Victoria. The gas plant in Vancouver is to be quadrupled in capacity, and in New Westminster and Victoria extensions and improvements are to be made, when large quantities of pipe, etc., will be required. Many extensions of the tram system are to be made into suburban and rural districts, with new depot and office buildings in New Westminster and Vancouver, costing $60,000 and $250,000 respectively. The capacity of the car construction shops in New Westminster is also to be doubled. At present, the company is handicapped for the lack of cars, being unable to get any from eastern manufacturers. Altogether, the cost of the extensions and improvements will total close to $6,000,000, making the company's total investment on the coast, about $15,000,000.

Evans, Coleman & Evans, of this city, have leased 800 feet of waterfrontage from the C.P.R., at Port Moody, where they will locate a gypsum plant, to be known as the B. C. Gypsum Co. It is being established in co-operation with W. R. Nichols, president and general manager of the Pacific Coast Gypsum Co., of Tacoma. The plant will have a capacity of 50 tons per ten-hour-day of hard wall plaster. Raw material will be brought from Alaska. The estimated cost is over $50,000. R.B.B.

McCallum & Co.'s Hardware Store at Cranbrook, B. C.

CRANBROOK B.C.

December 15. — Business throughout this section of the country has been excellent, recently, and McCallum & Co., hardware merchants, report a very good fall trade.

This firm has a fine store, as the accompanying photograph shows. Moffat's "Canada National" ranges are displayed, and a good trade is done in kitchen ware. Paints are kept at the rear of the store, while a good assortment of cutlery, shelf and builders' hardware is carried in stock. G.W.

VICTORIA.

December 16.—There is at the present time quite a boom in inside business property, some very fine business blocks having been sold within the past week. D. Spencer, proprietor of Victoria's large departmental store, has purchased the porperty at present occupied by the Times newspaper, for an addition to their already large premises, forming on the ground floor an addition to their hardware and crockery department.

Another firm who have had to enlarge is the B. C. Hardware Co., They have bought a piece of property next to Wilson Bros., wholesale grocery, and are to erect a two-storey and basement building for a warehouse.

The firm name of the hardware firm of Drake & Horn has been changed to the Drake Hardware Co.

A fine, large apartment house is to be erected to Fort Street in the spring.

T. Dawes, representing Alfred Field & Co., Sheffield, Eng., with a large line of cutlery samples, was a visitor in town this week.

Christmas trade this year, so far, has been very good, much ahead of any previous year. All branches of the retail trade have the same report. All indications point to a banner holiday trade.

W. B. C.

NORTHWEST TRAVELERS.

Winnipeg, Dec. 20.—The 27th annual meeting of the Northwest Commercial Travelers' Association took place on Saturday evening, Dec. 18, in the Travelers' club rooms, with all the officers and about 35 active members present. The annual reports were received and adopted. The following officers and directors were elected for the year 1910: President, E. L. Thomas; Vice-president, G. W. Barrett; Treasurer, L. C. Macintyre; Secretary, Fred J. C. Cox; Directors, J. A. McTaggart, J. H. J. Murphy, Chas Holden, A. McAllister, A. Paxton, T. E. Elliott, A. E. Wayte, J. Brockest, J. E. Holland, W. J. Litster, W. J. Stevenson and Wm. Stitt; Vice-president for Calgary, E. Dagg; Vice-president for Edmonton, F. M. Morgan; Vice-president for Regina, A. C. McGiverin; British Columbia Board, Vice-president for Vancouver, C. P. Egan; directors for Vancouver, J. H. Foster and A. R. McFarlane; Vice-president for Victoria, H. C. Briggs; Director for Victoria, Percy Cudlip; Director for New Westminster, F. J. Lynch; Director for Kootenay, H. Byers.

The annual banquet of the association is to be held at the Travelers' club on Thursday, December 30.

TRADE NOTES.

R. J. Brown & Co., hardwaremen at Crandell, Man., have dissolved.

The Battleford Hardware Co., have purchased the tinsmithing business formerly conducted by W. Collinge.

Gordon R. Howden has purchased the tinsmithing department of R. M. McKay's hardware business at Melita, Man., and will carry on the business in a new stand.

T. T. Boggs, of Winnipeg, is opening up an office at Portage la Prairie, for the Economy Heat & Generator Fuel Saver, as well as for the Northwest Battery Co.

Western Canada Hardware Market Situation

Our Western Correspondent Reviews the Market Outlook — Hardware Quotations Corrected by Telegraph From Hardware and Metal's Winnipeg Office up to Noon on Friday.

Winnipeg, Dec. 24.—For a number of days past the wholesale houses have had the appearance of a holiday season. Repeat orders have been very large this year. This morning a lady rang up a local hardware merchant and asked what he had in silver plated cake trays. The dealer did not have one in stock, but told her he had a fine line in all sizes. She said she would be down in the afternoon and call in to see them. In the meantime the merchant purchased the imaginary stock and had it elaborately displayed when the lady arrived.

Winter goods are receiving limited attention, with the exception of a few specialties. Lanterns, horseshoe nails and kerosene oils are the leading lines at present. Pennoline oil has been reduced 1 cent. Some wholesalers have commenced stock taking and all the houses contemplate doing this work during next month. It is possible that local houses will find that stocks are lower than ever before in the history of their business.

Winnipeg Quotations.

Weather Strip—Wood and felt, No. 61, $1,25 per 100 feet; No. 62, $1.75; No. 64, $2.25. Blue felt, 40 cts. per pound.

IRON FIRMS CONSOLIDATE.

Following the recent consolidations of of various iron and steel industries under the head of the Canada Iron Corporation, and the merger of twelve cement companies, comes the announcement of the consolidation of four large iron working companies operating six mills in various parts of Ontario, these being the Toronto Bolt & Forging Co., Toronto, having bolt mills at Swansea (Toronto) and Gananoque, and rolling mills at Sunnyside (Toronto), the Brantford Screw Co., Brantford, the Belleville Iron & Horseshoe Co., Belleville, and the Gananoque Bolt Co., Gananoque.

These four concerns have been consolidated under the name of the Canada Bolt & Nut Co., Ltd., with headquarters at Toronto, and having a capitalization of $2,500,000. Lloyd Harris, M. P., of the Brantford Screw Co., is to be president of the new company and T. H. Watson, who recently resigned as manager of the Toronto Bolt & Forging Co., in order to give his attention to bringing about the present consolidation, is to be vice-president and general manager. George Glilies, president of the Toronto Bolt & Forging Co., has disposed of his interests and is retiring.

Further details of the consolidation are not yet completed, but announcement will be made as to the composition of the board of directors after the next meeting. The question of enlarging the Swansea plant is also being considered, but the main changes likely to be made are the concentration of certain lines of work in the different plants, there being at present some duplication in this respect.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal waterworks and sewerage systems, railway or mining news, etc.

Industrial Activity.

D. Rabbitt is erecting an elevator at Daysland, Alta.

The Bruce Mines Sawmills Co. have just completed a new plant.

The J. B. Snowball Co. will erect a grist mill at Chatham next fall.

Hewson-Campbell & Dail have started a shingle mill at Aldergrove, B.C.

Russell & Son are erecting a heavy portable saw mill at Thornloe, Ont.

The Tudhope Carriage Co.'s works at Orillia started operations last week.

After a shut down of several weeks waiting for logs, the Clark Bros.' butter tub factory opened up.

An up-to-date shingle mill is being added to the Harrison Lake, B.C., plant of the Rat Portage Lumber Co.

The G. T. Pacific are calling for tenders for the construction of large wharves to cost $100,000 at Victoria.

Barnett & McQueen secured the contract to build the new cleaning elevator at Port Arthur. Work starts at once.

The J. M. Fortier tobacco factory at Farnham, Que., is now almost completed and it is expected that work will be commenced about January 1.

Prescott ratepayers will on January 3 vote on the question of granting aid to the Ogdensburg Soda Pulp Co. to establish a branch factory there.

The Canadian Linen & Paper Co., have closed an agreement with the Port Arthur council and will locate there a $50,000 plant. Work will start in May.

A company to be known as the Radium Oil & Chemical Works have established their Canadian headquarters in the Ashdown Building, and will erect a factory shortly.

The Canadian Pacific Lumber Co.'s saw and shingle mill at Port Moody, B.C., which has beeen closed down for some months, will resume cutting early in January.

The Hunting Lumber Co. whose sawmill was recently destroyed by fire, will build a new mill on a site recently secured on Burrard Inlet, between Barnet and Port Moody, B.C.

The Canadian Iron Corporation and Mackenzie & Mann intend spending during the coming year $120,000 on the Big Pier at Port Wade, N.S., for the loading and export of iron ore.

U.S. capitalists have about completed arrangements for the erection of a large basket and box works at New Westminster, B.C. It is expected that the plant will be in operation in January.

Hugh Baird & Son, Markdale, Ont., intend to erect a sawmill at Thornbury, with a capacity of 50,000 feet daily. They are negotiating for the old mill site, as there is a fair harbor there.

Negotiations have been in progress for some time with Senator Thompson for securing the Estey mill site near Fredericton, for the erection of the new mill which a company that is being organized intend to erect there next spring.

Among the British concerns which intend to locate branches in Canada are Doulton & Co., makers of the famous Doulton ware; Maw & Co., one of the largest makers of fancy tiles, and Hope & Co., of Birmingham, manufacturers of locks and ornamental ironwork.

John Bell, of A. G. Lambert & Co., Nelson, B. C., and Thomas B. White, of Johnson, White & Co., manufacturers of hardwood lumber, staves and hoops, Kolapore, Ont., have acquired from the Boundary Development & Exploration Co., of Greenwood, B. C., a ten acre mill site near Midway, in the Boundary district, and will erect a good-sized sawmill before spring.

Municipal Undertakings.

Wallaceburg, Ont., is contemplating the instaling of a waterworks system.

Revelstoke's council has given notice of the construction of a number of sewers.

Vankleek Hill contemplates instaling waterworks and sewerage systems at a cost of $53,000.

Sewer and waterworks extensions to cost $160,000 will be constructed next year at Saskatoon.

Dunnville's town council has passed a by-law and will go on with the construction of its sewerage system.

The Winnipeg Board of Works have recommended the construction of a trunk sewer for Elmwood at an estimated cost of $21,000.

J. Gault, has reported favorably on the project to supply Edmonton with water from Pigeon Lake by a gravity system. Initial expenditure of $2,000,000 is necessary.

Tenders addressed to the Minister of Public Works, Victoria, will be received until January 19, 1910, for the construction and completion of a permanent system of sewerage for Prince Rupert.

Public Buildings.

A $10,000 post office is to be built at Chilliwack, B.C.

A new Baptist church is being planned for erection in Parkdale.

A new school of two storeys will be erected shortly at Portage la Prairie.

St. Matthews Anglican church, Brandon, will build a new edifice next year.

A Winnipeg syndicate propose erecting a $25,000 opera house at Prince Albert.

J. W. H. Watts, Ottawa, is having erected a stone church at South March, Ont., to cost about $5,000.

The by-law to raise $40,000 for the erection of a public school has been passed by the ratepayers of Chilliwack, B.C.

Nanaimo is to have a new opera house and dance hall. The whole cost of the building is estimated at between $30,000 and $40,000.

J. W. H. Watts, Ottawa, is preparing plans for a new church building to be erected at Fitzroy Harbor, estimated cost is about $4,000.

The plans for the new academy at Sydney, were discussed and plan No. 8 chosen. The estimated cost is $52,000, exclusive of heating.

Three new buildings—observatory, chemical building and mining building—are in course of construction at Queen's University, Kingston.

Peterboro ratepayers will be asked to raise $19,000 at the next election for the purpose of erecting and equipping the new isolation hospital.

The new school for crippled children, to be erected in the grounds of the Children's Memorial Hospital, at Montreal, will cost upwards of $15,000.

The Toronto Board of Control has approved plans for the new wing to the Isolation Hospital, and will soon ask bids for the construction; estimated cost, $80,000.

Work will be started on the customs house at Revelstoke next spring. The sum of $10,000 is on the estimates to provide for a start being made with the building and tenders will be called about May next.

The plans and specifications for the new Delatre Street school and the remodling of Beale Street school at Woodstock, Ont., were presented before the board and were adopted. Tenders are invited at once.

Property at Toronto, has been purchased by the Separate School Board as a cite for a new high school to replace the De la Salle Institute. Work on the erection of the new building may not go on for some time.

A. A. Post, Buffalo, is preparing plans and will soon receive bids for a new building for St. Michael's Hospital, Toronto. It is to be four storeys and basement, of brick and structural steel, fireproof; estimated cost $200,000.

Dr. Dagenais, chairman of the Montreal Health Committee, has recommended a suitable building for the civic hospital near Back river for the treatment of tuberculosis. Building Inspector Chausse; estimates call for $12,000 to $15,000 for alterations.

The new Lampson Street school, Victoria, is to be built by Thomas Ashe, the contract having been awarded to him by the public works department. Work is to begin at once, and is to be hurried on to completion. The total contract price is $14,854, which includes the Rutley tubular furnace heating system.

A new and thoroughly up-to-date Catholic hospital will be built at Prince Albert next spring, and already the plans and specifications have been drawn and approved. The new hospital will have accommodation for one hundred patients, and will be built at a cost of $100,000.

General Building.

The Bank of B. N. A. are to erect a building at Semans, Sask., in the spring.

The Rumley Co., of Laporte, Ind., will have a large warehouse erected at Saskatoon.

Herbert Weston is preparing to erect a large store and office block at Saskatoon.

The Winnipeg Builders' Exchange will erect a temple costing a quarter of a million dollars.

J. W. H. Watts, is having two stores erected at Ottawa, for R. McGiffin, at a cost of $12,000.

Colborne P. Meredith, is erecting a residence and surgery at Ottawa, for Dr. John Robertson, at an estimated cost of $12,000.

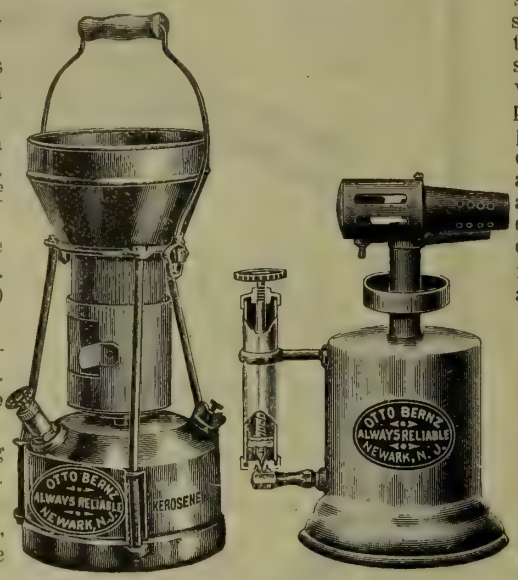
J. W. H. Watts, is having extensive alterations made to the residence of M. P. Davies, Ottawa, at a cost of $15,000 to $20,000.

A new wing to cost approximately $20,000 will be erected next spring, by St. Mary's C. L. and A. A. to their club building at Toronto.

Four building permits aggregating $13,000, were issued at Halifax recently. They were: G. Thomas, house; A. L. Wood, residence; A. Theakson, house, and John Simon, large addition to the Cronan property.

An option on property at Toronto has been taken by the new Conservative Club, as a desirable site for a club house. E. J. Lennox is mentioned as the architect, who is preparing plans. Estimated expenditure, $170,000.

Arthur J. Bird is working on plans for a five-storey apartment house, which will be erected for Mr. Peter Agren, at Vancouver. It is estimated the cost will be about $50,000, and construction will start almost immediately.



Recent Toronto building permits include: W. L. Bullen, two pairs of dwellings, $10,000; C. A. Burns, three-storey hotel, $10,000; S. Garfunkel, a row of seven stores and dwellings, $14,000; Waters & Elliott, four pairs of dwellings, $20,000.

Recent building permits at Ottawa include:—Geo. A. Eaman, dwelling, $3,000; C. R. Johnson, two dwellings, $6,200; J. and P. Murphy, double dwelling, $3,500; John Hallan, addition to warehouse, York Street, $2,000; Ottawa Fireproof Supply Company, warehouse, $2,100; Mrs. Louis Blais, dwelling, $2,000, and Robt. Armstrong, dwelling, $2,000.

NOVELTIES AND NEW GOODS

KEROSENE FURNACE AND TORCH.

Otto Bernz, 21-43 Ashland Street, Newark, N.J., are now pushing the "Always Reliable" B kerosene furnace and the No. 35 kerosene torch, which they claim will burn as long and do as much work with two quarts of kerosene as with four quarts of gasolene, a saving of 50 per cent. The necessity of procuring an insurance permit is also

Kerosene Furnace and Torch.

avoided because kerosene can be carried with much less danger of being ignited and causing damage by fire. The body is made entirely of heavy metal and the burner is of the best composition, easily taken apart and cleaned of carbon deposits. The furnace lists at $7 and the torch at $4, and they are specially adapted for use by plumbers and tinsmiths.

DOUBLE EXTENSION BOLT.

The Pullman Mfg. Co., Rochester, N. Y., are placing on the market a new double extension door bolt, one of the strongest features of which is the fact that it is entirely concealed in the French door or casement window, the

Pullman Double Extension Bolt.

only visible part being the knob or lever handle. In marketing each bolt will be put in a box and shipped to the dealer without the ¼ inch rods. The advantages claimed for this method are that it will facilitate the shipping, and at the same time avoid the necessity of the dealers sustaining a loss or the consumer having to pay an expected loss on account of specifications which call for bolts of odd lengths. If the bolts were furnished in 5, 6 and 7 foot lengths and the dealers had calls for bolts of 5½ 6½ or 7½ foot lengths, it would be necessary for him to cut down and re-thread the bolt, and somebody would have to stand the loss on account of waste of stock. The Pullman Company believe that every hardware dealer carries in stock ¼ inch round stock, and therefore when they supply bolts it will be a simple matter for them to include in the price of the bolt their price on the required number of feet of this stock, and also their charge for threading the rods at both ends; and in that way fill according to specifications all orders accurately. If the dealers do not have ¼ inch stock they can purchase it in lengths as desired.

NEW GARBAGE CAN.

The Thos. Davidson Mfg. Co., Montreal, are manufacturing a new ash and garbage can called the Arrow brand. It is made of heavy reinforced galvanized iron, scientifically designed, and constructed to give the fullest amount of strength at points of greatest strain.

DOOR CHECK AND HOLDER.

The Yale & Towne Co., N. Y., have added to the Blount door check, which they have been making for some years, a holder attachment, so that this new Blount door check not only shuts the door and prevents slamming, but also holds it open wherever desired. A simple device is set in the door check which can be set at a given point, so that when the door is pushed open there it stays. A slight pull releases the door, whereupon the spring operates as though it carried no stop. This device is a little latch that lifts up when the door is opened, but it does not catch unless the door is pushed back to a certain point, which point can be set to suit any whim. When the latch catches it holds the door open until it is given a little pull. This slips the latch up over the catch that holds it and the door closes gently, firmly and without slamming.

New additions will be built to the Central and Oriental hotels, at Revelstoke.

Warren & Wetmore, New York, are said to have completed plans for the new Ritz hotel at Montreal.

The Retail Paint Trade

SIT DOWN AND THINK.

With the holiday rush over the dealer has now a great opportunity to sit down and think out his paint selling programme for the new year. It is going to be the best ever, or is it to be no better than others, which have gone before. It is up to the dealer to say. No extra push from the manufacturer can aid him if he does not want to increase his yearly turnover.

If the merchant is satisfied with pursuing the same tactics; with issuing the same amount of advertising; with giving the same amount of attention to his paint department that he has previously done, then, if he is very lucky, he may hold his own. But even if none of his old customers are taken from him, he does not advance with the great consumption development that is going on around him.

But if he is not satisfied with his old programme. If he intends to improve on the means that he used this year, if he wishes to extend his trade, then now he will sit down and begin to work out a campaign so energetic that the one just finished will fall into insignificance.

Ready mixed paint is new in the world. People have to be educated up to the merits of the article. They know the value of nails but they do not, in many cases, know the value of paint. Thus the dealer has two courses to pursue. He has to educate, and he has to sell. But the results are worth the efforts. Notice what some merchants have done with their paint department. When a full carload of paint constitute one order, as happened recently in Ontario, some idea can be gained as to how a paint demand may be worked up. There is profit in a paint department, and there is a great undeveloped consumption field What more can any man want?

Sit down, Mr. Dealer, and think out schemes to increase the paint trade of your district. Be not content with the meansures adopted last year but go much better. For one circular sent out last spring send out two this coming spring, for one window display run two, and so on. Even so with the stock. Have confidence in the trading prospects of the community and in your ability to push your lines, and increase your stock. Follow the line of arguments used by your paint manufacturers. Utilize the advertising matter they supply.

In fact, resolve to put extra force into your paint selling campaign, and the results will be surprising. Let no man be content with what he has done. Therein is retrogression. Rather be dissatisfied, and thereby progress. There is this undoubted fact that a large portion of the community that should use paint does not do so. It rests with you, Mr. Dealer, whether you get your share of this or not. Sit down and think over things.

"the finish"
"that endures"

The Montreal Rolling Mills Company Montreal

PAINT AND OIL MARKETS

MONTREAL.

December 24.—Linseed oil still continues to be the prominent feature of the markets, and another advance of 2c is reported this week. Red lead is also 25c dearer. Other lines are stiff, and the whole tone of the markets is very good.

Higher prices has not checked orders, and for the time of the year, there is very good trade moving. It may be that there is more speculative buying going on, but in any case the month is showing extremely satisfactory business.

TURPENTINE — Shipments of turpentine have been of a very satisfactory character. While the orders are not large, moderate sized lots are going out steadily, at the unchanged price of 78c to 80c single barrels.

LINSEED OIL—Flax seed continues its upward march, and the linseed oil market has perforce to keep pace with the advance in the raw material. This week another advance of two cents is reported. Trade has not been checked and buying in a speculative way is noticed. We now quote: 1 to 4 barrels, in one delivery, raw, 77c per gal.; boiled, 80c per gal.; net 30 days, f.o.b. Montreal.

GROUND WHITE LEAD—Grinders are hesitating to accept orders for ground white lead at present quotations. Small orders for immediate delivery are being filled at present quotations, but no desire is shown to book contracts owing to the strong tone of the markets generally, and the greater strength of ground white lead. We quote: Strictly pure about $5.35 to $5.85, according to quality, and No. 1, $4.95 to $5.35, f.o.b. Montreal.

RED LEAD—Red lead does not show any tendency to be called for in heavy lots, but in view of the stiffness at the primbary markets and the healthy tone all the way round, locally prices have been advanced about 25c. We now quote: Genuine red lead in casks, $4.50; in 100-lb. kegs, $5; less quantities at $6 per 100 lbs.; No. 1 red lead, casks, $4, kegs, $4.50, and smaller quantities, $5.50.

WHITE ZINC—There is a good movement, stimulated no doubt by the mild weather reported in various part of the country. We quote: Dry V.M. Red Seal, 7½; Red Seal, 7c; French V.M., 6c; Lehigh, 5c; white zinc, ground in oil, pure, 8½c; No. 1, 7c; No. 2, 5½c.

PUTTY—Putty has fallen into its winter dullness, and shipments are light. We quote: Standard putty, 800 lbs. in casks, $1.75; in 100-lb. drums, $2; bladder putty, 400 lbs. in barrels, $2.15; in 110-lb. cases, $2.25; in 25-lb. tins, $2.15; 12½-lb. tins, $3.25, f.o.b. Montreal.

TORONTO.

December 24.—The holiday season has overshadowed paint buying this week. Travelers are in from their territories, and local trading is somewhat slow. It looks like the commencement of the dull season. On the whole the year has been a successful one in paints, more particularly since the opening of summer business.

There is not one especial line that is moving in volume just now, though with the advance in ready mixed paints expected to take effect on January 1, it may be that booking may be done between now and that time. Linseed oil has gone up another two cents a gallon, and pig lead has stiffened since last week. White lead manufacturers refuse to book for futures, until after the new year. Glass prices are not yet out; nor are paris green lists. All these lines, it is felt among jobbers are slated for an advance.

Advices from Florida say that the year's crop of turpentine and rosin has practically all been made, and there is very little more of either material coming into that market at the present time, consequently, there is none to offer there until the new crop is made in March or April.

LINSEED OIL—Another advance of 2 cents has been made in the price locally, which is accounted for by the high pice of flaxseed at Chicago. There it is now nearly 20 cents per bushel higher than it has been any time in the past ten years, and if this price is maintained it will not be at all surprising if the Canadian crushers find themselves compelled to make a further advance of from 2 to 5 cents per gallon for the oil. This condition is expected to last until April, when new Argentine seed will be ready for the crusher. Just at present linseed oil is at 77c and 80c per gallon for single barrels of raw and boiled oil respectively.

TURPENTINE — As regards turpentine the market has been very quiet. The Savannah price has been fluctuating and owing to the light demand and the continuation of very fine weather by which the supplies have been a little more than anticipated, the market has been somewhat weaker, but it is believed that after the 1st January, when the varnish makers have passed the stock-taking season, and their travelers again get out on the road, an increased demand will take place and prices will be advanced again to the highest point for the season. Locally the price is somewhat easier in that while the market quotation remains at 80c for single barrels, turpentine may be had for 78c and 79c.

READY MIXED PAINTS — It has been practically decided to advance all grades and lines of ready mixed paints 10 cents on January 1. New price lists are expected early next week. Up to the present traveling salesmen have not yet received authority to book forwards at ruling prices. Paris green prices are

BRANDRAM-HENDERSON LIMITED

Montreal Halifax
St. John Winnipeg

A Strong Point

The strongest inducement you can offer for the best paint trade of your town is NOT PRICE—but a paint that will give supreme satisfaction. Buyers appreciate "QUALITY" as much as they condemn the lack of it. The paint that fades, checks, cracks and peels off stands as a witness of somebody's dishonesty or incompetency—the dealer who sold it gets the blame. Don't sell that kind.

Martin-Senour

PAINT—100% PURE

will help you to make lasting friends of the people you sell to. It will help you to establish your business on a firmer, surer foundation. The requirements of paint are varied—the paint that best meets the most of them is the best for you to sell—that's *Martin-Senour 100 per cent pure paint.* It will be a big strong point in your favor when you can offer this paint to your patrons. Why not write for the Agency today?

also expected next week, though no unusual changes are anticipated.

WHITE LEAD—This line seems ready for an advance. One manufacturer, when offered a booking for February, refused to take the business, saying that until after New Year's day he would do no booking. Then there has been an advance locally in pig lead. This week's prices continue to range from $5.55 to $6.10.

RED LEAD — This lead, too, will probably go higher, though up to the present the line holds unchanged at $4.25 to $4.55.

GLASS AND PUTTY—Quite a noticeable decline in the volume of business moving is apparent this week. New prices for 1910 are not yet out. They usually come out early in December, but importers seem undecided as to what the 1910 prices should be. There is one thing certain next year's importations will be at higher figures than is the case this year.

PETROLEUM—Steadily active business is being done at unchanged prices. Prime white is 13½c; water white, 15½c, and Pratt's astral, 17½.

PAINT TRADE CHANGE.

W. G. Francis, recently manager of Benjamin Moore & Co., West Toronto, has left that company to accept the management of the varnish department of Ault & Wiborg, printing ink and varnish manufacturers, Toronto, the headquarters of the company being at Cincinnati, Ohio. A factory has been operated for some years at 19 Charlotte Street, Toronto, but a new varnish plant is to be erected on Royce Avenue, the plans for the work being completed, and an expert varnish maker from England being already on the ground.

W. G. FRANCIS, TORONTO,

Who Has Accepted the Management of the Varnish Department of the Ault & Wiborg Co.

Ault & Wiborg have already developed a factory trade in varnishes, lacquers and japans, and now intend going after hardware store business, making all grades of these goods and adding enamels to the line.

Ault & Wiborg have a high standing in the printing ink industry, and finding it necessary to make a fine grade of varnish for their own use, ought to build up a good trade in their new line, with the advantage of Mr. Francis' long connection with the paint trade.

F. C. Surbeck, formerly assistant sales manager at the Brooklyn headquarters of Benjamin Moore & Co., has succeeded Mr. Francis as manager of the West Toronto plant.

A MODERN PAINT VAULT.

To avoid high insurance rates, a Jersey City firm, in rebuilding store, made a separate room or vault for reserve stock of paints, oils, etc. It consists of a fireproof room 18 x 25 feet with metal ceiling, concrete floor, etc. The room is separated from the main store by sliding doors. Should a fire break out the doors will automatically close. In this vault are machine oil, asphaltum, oils in bulk, varnish, dry colors, turpentine, lamp black, floor wax, candles, alum, glue, kerosene, alcohol, cement, etc. There is a balcony around the entire room. There are seven rows of shelving above the platform and three rows of shelves under, but above barrels. Labels are on the boxes to indicate contents. Each barrel or large can is plainly labeled. The shelves around balcony are for goods for which there is not much call. Down cellar is a vault of the same size, also fireproof. This method saves 40 per cent. in the premium for the whole store, the stock of which fills four floors and basement.

PAINT METAL WORK NOW.

This is the season for painting copper and other metal work on buildings as a means of preserving such material against rust and the inroads of winter weather. The man who overlooks this necessary process will have cause to regret his error when his bills are presented for repair work later on. A little application of good paint at this season of the year saves many dollars in replacing material that might otherwise have been saved for good service. Many owners of houses and business buildings have learned this secret by experience, but there are others who need to be told, otherwise they will fall a victim to the habit of doing nothing in this line until forced by necessity to make amends for neglect.

Vancouver's recent permits include:—Vernon Bros., dwelling, $5.000; J. Skeffington, dwelling, $2,000; L. B. Moore, dwelling, $3,000; C. R. Drayton, store and dwelling, $3,000; C. C. Delbridge, store and dwelling, $4,000; C. B. Armitage, dwelling, $2,200; Brackman & Ker, alterations, $2,500; P. J. McEwan, dwelling, $2,000; W. J. McDonald, dwelling, $2,400; A. Shaw, dwelling, $2,500, and G. R. Carson, dwelling, $3,000.

With all that is dear to the heart

BOWSER

LONG DISTANCE SYSTEM FOR HANDLING GASOLENE OR KEROSENE

meets the highest approval because it is SAFE. Every feature of the Bowser Long Distance Underground Storage System meets the requirements of the most careful Insurance Companies and Fire Underwriters.

Here is the Plan. The oil is stored in a tank buried outside, any distance that you may desire away from the building. The tank is made of good heavy sheet steel, riveted and soldered, tested and guaranteed leak and evaporation proof. It is painted with three coats of asphaltum which absolutely prevents the damp earth from acting upon the metal.

The pump is the latest improved, all metal, and measures accurate gallons, half gallons, quarts or pints at a stroke.

The System Has Never Caused a Fire, nor has an explosion of a Bowser Tank ever occurred. One hundred and eighteen outfits passed through the San Francisco fire, and not one explosion resulted. Some of the pumps were warped and melted by the heat, but the oil remained in good condition in the tanks.

The Bowser System is safe in every way. Write TO-DAY for Bulletin 156.

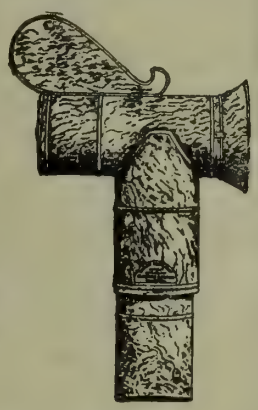
Wish Their Customers One and All

A Merry Christmas and Increased Prosperity for 1910

Hamilton, Ontario 24th December, 1909



FIX UP YOUR CHIMNEYS

Even the best stove or furnace will be unsatisfactory if the chimney does not draw well. But the

"Zephyr Ventilator"

will give a good draft to any chimney. It will even allow the burning of soft coal in the stove, with good results.

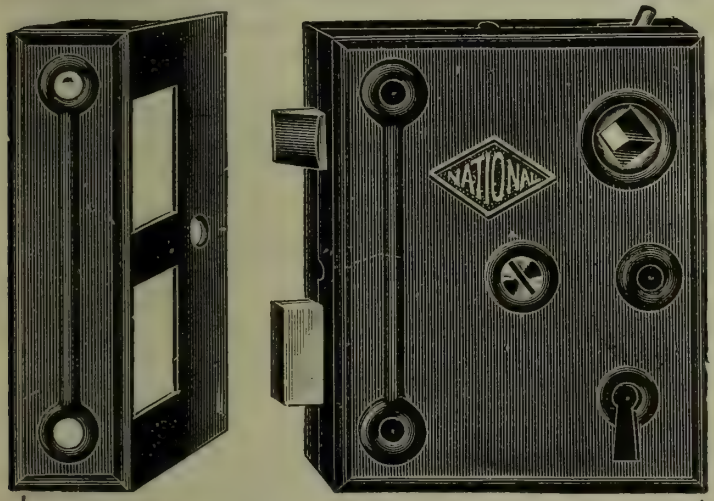
We want you to sell the "Zephyr Ventilator" in your town. There is money in it, and the satisfaction that it gives will bring you new customers. **The "Zephyr"** cannot be excelled for ventilating the rooms of **Clubs, Steam Laundries,** etc. **The "Zephyr" makes high chimneys unnecessary.**

Montreal, Jan. 18, 1909.

J. W. Harris Mfg. Co., Ltd.
Montreal.

Gentlemen :—

Replying to yours of the 14th inst., as far as we are concerned your "J. W. Harris Rotary Ventilators" have always given entire satisfaction, and we are pleased to recommend them.



Yours truly,
Lariviere Incorporated.
591 St. Lawrence Boulevard.

Is Your House Warm?

That's the question to ask some of your customers. The house that is warm in winter is cool in summer. Our ***TARRED FELT*** and ***READY ROOFING*** and ***BUILDING PAPERS*** just meet such cases. ***DEMONSTRATE*** the brands you know to every owner of property. You will make a good friend for us and for yourself. ***OUTBUILDINGS*** and all the Stables, etc., can be made as cosy as possible by just a suggestion of common sense ***BUILDING PAPER.***

CURRENT MARKET QUOTATIONS.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

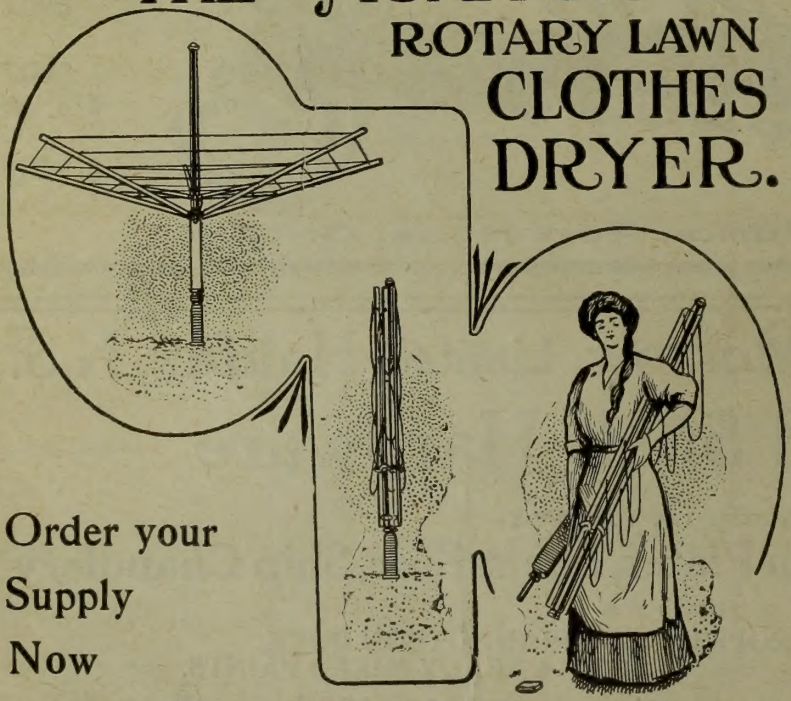
This is Expert Evidence Regarding

The Ross Rifle

CAPT. CARSTAIRS, Musketry Instructor, Strathcona, Alberta, says :—

" Your rifle is the best in existence and it comes
" up to my own ideas of what a rifle should be."

The Ross Sporting Rifle is equal in efficiency, material and finish to the Ross Military Rifle.



Dealers everywhere are increasing their orders and the sale of Ross Rifles is an ever growing one.

If you are not yet handling them, write us at once for full particulars.
